

<b>Candidate forename</b>						<b>Candidate surname</b>				
<b>Centre number</b>						<b>Candidate number</b>				

**OXFORD CAMBRIDGE AND RSA EXAMINATIONS  
GCSE**

**A215/02**

**TWENTY FIRST CENTURY SCIENCE  
ADDITIONAL SCIENCE A**

**Unit 1: Modules B4 C4 P4 (Higher Tier)**

**MONDAY 21 MAY 2012: Morning**

**DURATION: 40 minutes  
plus your additional time allowance**

**MODIFIED ENLARGED**

**Candidates answer on the Question Paper.  
A calculator may be used for this paper.**

**OCR SUPPLIED MATERIALS:**

**None**

**OTHER MATERIALS REQUIRED:**

**Pencil**

**Ruler (cm/mm)**

**READ INSTRUCTIONS OVERLEAF**

## **INSTRUCTIONS TO CANDIDATES**

- Write your name, centre number and candidate number in the boxes on the first page. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer ALL the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).

## **INFORMATION FOR CANDIDATES**

- The number of marks is given in brackets [ ] at the end of each question or part question.
- The total number of marks for this paper is 42.
- A list of physics equations is printed on pages 4–5.
- The Periodic Table is printed on the back page.

# **BLANK PAGE**

# **TWENTY FIRST CENTURY SCIENCE EQUATIONS**

## **USEFUL RELATIONSHIPS**

### **EXPLAINING MOTION**

**speed = distance travelled**  
**time taken**

**momentum = mass × velocity**

**change of momentum = resultant force × time for  
which it acts**

**work done by a force = force × distance moved in the  
direction of the force**

**change in energy = work done**

**change in GPE = weight × vertical height difference**

**kinetic energy =  $\frac{1}{2} \times \text{mass} \times [\text{velocity}]^2$**

## ELECTRIC CIRCUITS

$$\text{resistance} = \frac{\text{voltage}}{\text{current}}$$

$$\frac{\text{voltage across primary coil}}{\text{voltage across secondary coil}} = \frac{\text{number of turns in primary coil}}{\text{number of turns in secondary coil}}$$

$$\text{energy transferred} = \text{power} \times \text{time}$$

$$\text{power} = \text{potential difference} \times \text{current}$$

$$\text{efficiency} = \frac{\text{energy usefully transferred}}{\text{total energy supplied}} \times 100\%$$

## THE WAVE MODEL OF RADIATION

$$\text{wave speed} = \text{frequency} \times \text{wavelength}$$

**Answer ALL the questions.**

**1 Kidneys are important organs in the body.**

**(a) Kidneys make urine.**

**They filter molecules such as glucose from the blood.**

**(i) What happens to the glucose after it has been filtered?**

**[1]**

**(ii) Which two other chemicals are filtered from the blood?**

**Put rings around the TWO correct answers.**

**enzymes**

**protein**

**salt**

**starch**

**urea**

**[1]**

**(b) The amount of water in the urine depends on the concentration of blood plasma.**

**Here are some factors that affect the concentration of blood plasma.**

- A high external temperature**
- B drinking lots of water**
- C eating salty food**
- D doing vigorous exercise**

**What effect will each factor have on urine concentration?**

**Write each letter, A, B, C, and D, in the correct column in the table.**

Makes urine more concentrated	Makes urine more dilute

**[2]**

- (c) (i) The volume of urine produced is controlled by the hormone ADH.**

**Which gland releases this hormone?**

**Put a ring around the correct answer.**

**adrenal**

**pituitary**

**sweat**

**thyroid**

**[1]**

- (ii) Ecstasy is a drug that changes the volume of urine produced.

Here are possible steps in this process.

Not all of the steps are correct, and they are not in the right order.

- A Less urine is produced.
- B More urine is produced.
- C ADH reaches the kidney via the bloodstream.
- D ADH reaches the kidney via the nervous system.
- E More ADH is produced.
- F Less ADH is produced.

Andrew takes some Ecstasy. How does this affect his urine production?

Choose from the steps A, B, C, D, E and F and fill in the boxes to show the correct order.

--	--	--

[1]

[Total: 6]

**2 Steve is trekking across a hot desert.**

**He is sweating a lot.**

**After a while his sweating stops and his skin becomes dry.**

- (a) Explain why this might happen, and describe the possible consequences.**

---

---

---

---

---

---

---

**[3]**

**(b) The support team arrive to treat Steve.**

**They give him water to drink.**

**Which two other treatments should they use?**

**Put ticks (✓) in the boxes next to the TWO correct answers.**

**give him food**

**sponge him with water**

**give him alcoholic drinks**

**handle him gently to keep  
blood flow to the limbs low**

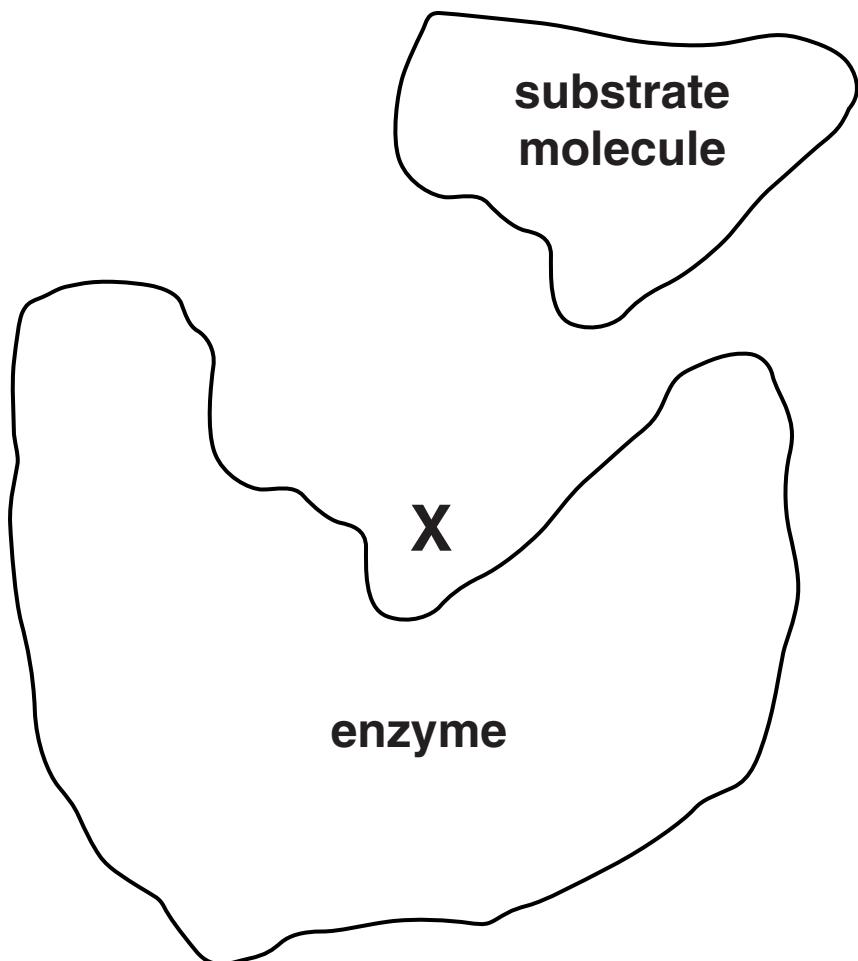

**use a fan**

**insulate him**

**[1]**

**[Total: 4]**

- 3 Enzymes are molecules that can speed up chemical reactions. The chemical that an enzyme works on is called the substrate.**

**(a) Complete the sentence.**

**The area marked X on the diagram is called the**

\_\_\_\_\_ .

**[1]**

**(b) Explain how raising the temperature can SLOW an enzyme reaction.**

[Total: 4]

#### **4 Sodium is a Group 1 metal.**

**Here is some information about Group 1 metals.**

	Melting point in °C	Boiling point in °C
Lithium	<b>180</b>	<b>1342</b>
Sodium		<b>883</b>
Potassium	<b>63</b>	<b>760</b>

**(a) Estimate the melting point of sodium.**

**answer** \_\_\_\_\_ °C

**[1]**

**(b) Complete the table to show the particles in an atom of sodium.**

Particle	Number in an atom of sodium
electron	<b>11</b>
proton	_____
_____	<b>12</b>

**[1]**

- (c) Sodium should be stored away from water because it will react.**

**When sodium reacts with water it makes sodium hydroxide and hydrogen gas.**

**What is the formula of the sodium hydroxide?**

**formula \_\_\_\_\_**

**[1]**

**[Total: 3]**

**5 Joe evaporates some seawater.**

**Crystals of sodium chloride (salt) begin to form.**

**(a) Joe knows that salt is sodium chloride.**

**He does a flame test to show that there is sodium in his salt crystals.**

**He looks at the spectrum.**

**Explain how the flame and its spectrum show that sodium is present.**

---

---

---

**[3]**

- (b) A group of students describe what happens when sodium chloride crystals dissolve in water.**

**Some of these statements are true, and some are false.**

**Put a tick (✓) in the correct box next to each statement to show if it is TRUE or FALSE.**

**When sodium chloride crystals dissolve in water ...**

	<b>TRUE</b>	<b>FALSE</b>
<b>... the ions move freely.</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>... the ions turn into atoms.</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>... hydrogen gas is produced.</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>... the solution will conduct electricity.</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>... the ions separate from each other.</b>	<input type="checkbox"/>	<input type="checkbox"/>
<b>... the crystals float on the surface and react.</b>	<input type="checkbox"/>	<input type="checkbox"/>

**[2]**

- (c) Seawater also contains small amounts of phosphate ions.

Phosphate ions can combine with sodium ions to make sodium phosphate,  $\text{Na}_3\text{PO}_4$ .

The charge on a sodium ion is single positive (1+).

What is the charge on a phosphate ion?

Put a **ring** around the correct answer.

1+

1-

3+

3-

4-

5+

[Total: 6]

**BLANK PAGE**

**TURN OVER FOR QUESTION 6**

- 6 Johnny adds solutions of halogen compounds to halogen solutions to see if there is a reaction.

Here is a table of his results.

	Sodium bromide solution [colourless]	Sodium chloride solution [colourless]	Sodium iodide solution [colourless]
Bromine solution [orange]	solution stays orange	solution stays orange	solution goes brown
Chlorine solution [pale green]	solution goes orange	solution stays pale green	solution goes brown
Iodine solution [brown]	solution stays brown	solution stays brown	solution stays brown

- (a) Use the table to put the three halogens in order of their reactivity.

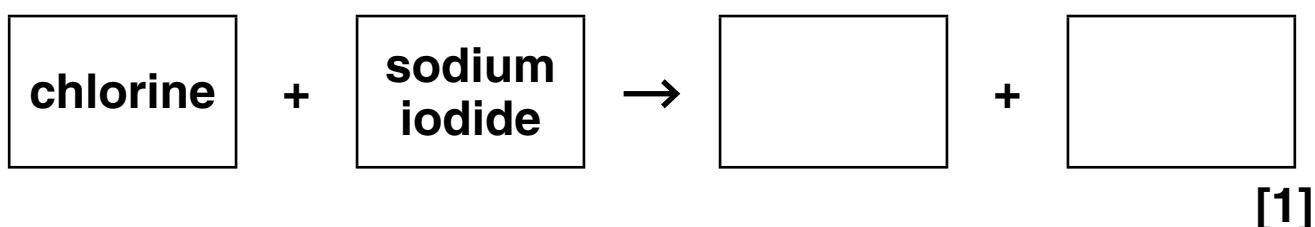

most reactive \_\_\_\_\_

\_\_\_\_\_

least reactive \_\_\_\_\_

[1]

- (b) Complete the word equation for the reaction between chlorine and sodium iodide.

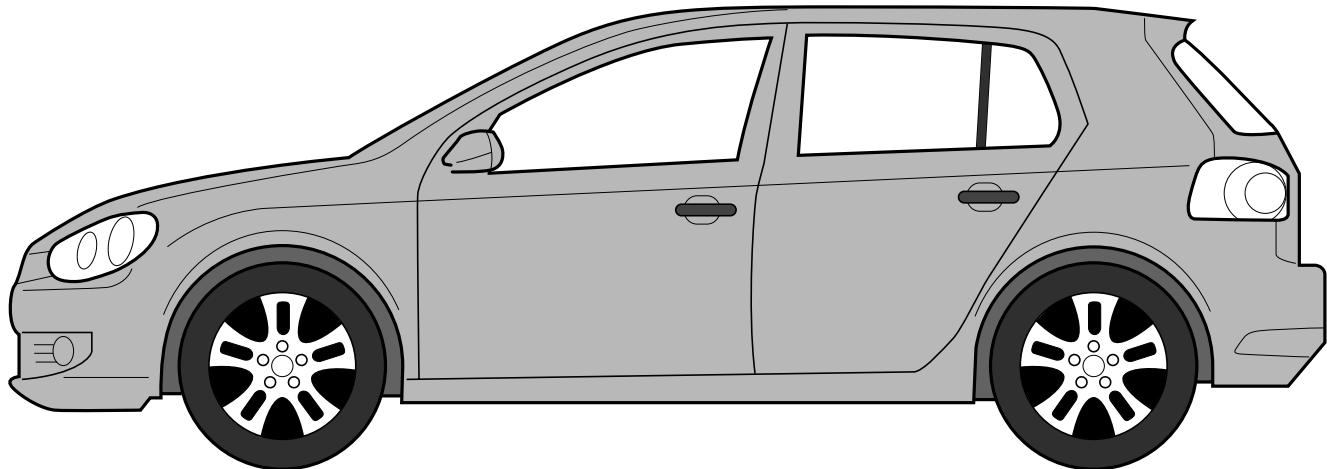

- (c) When bromine reacts with sodium iodide it makes sodium bromide and iodine.

Put the correct formulae into the spaces and then balance the equation for this reaction.

[Total: 5]

**7 Jane chooses a new car. She takes it for a test drive.**

**(a) Jane has a mass of 65 kg.**

**The new car can increase her speed from 0 m/s to 30 m/s in only 9 s.**

**She asks her friends to calculate the resultant force on her.**

**Which of her friends does the correct calculation?**

**ALAN**

$$65 \times 30 \times 9$$

**CARLO**

$$\begin{array}{r} 65 \times 30 \\ \hline 9 \end{array}$$

**BESS**

$$\begin{array}{r} 30 \times 9 \\ \hline 65 \end{array}$$

**DAVINA**

$$\begin{array}{r} 65 \times 9 \\ \hline 30 \end{array}$$

**answer** \_\_\_\_\_

**[1]**

- (b) Jane takes her foot off the accelerator and puts on the brakes.**

**Complete the sentence about the car as it slows down.**

**Choose words from this list.**

**counter**

**driving**

**gravity**

**reaction**

**weight**

**The car slows down because the \_\_\_\_\_**

**force is larger than the \_\_\_\_\_ force.**

**[1]**

**(c) The car has a crumple zone.**

**Explain how this reduces the force on Jane if the car has a head-on collision.**

**Use ideas about momentum.**

---

**[3]**

**[Total: 5]**

**8 Bill investigates friction by pulling blocks across a table with a force-meter.**

**He pulls each block across the table at a steady speed.**

- (a) Draw lines to link each FORCE on the block with its DIRECTION.**

FORCE	DIRECTION
friction from table	↑
weight of block	→
reaction from table	↓

[1]

**(b) Bill pulls a block at a constant speed across a HORIZONTAL table.**

**Here are some statements about this experiment.**

**Put a tick (✓) in the box next to the TWO correct statements.**

**The kinetic energy of the block increases.**

**The block cools down as it heats the table.**

**Bill transfers energy to the block by doing work on it.**

**Bill does no work because the block does not speed up.**

**The gravitational potential energy of the block decreases.**

**Friction transfers energy as heat to the table and the block.**

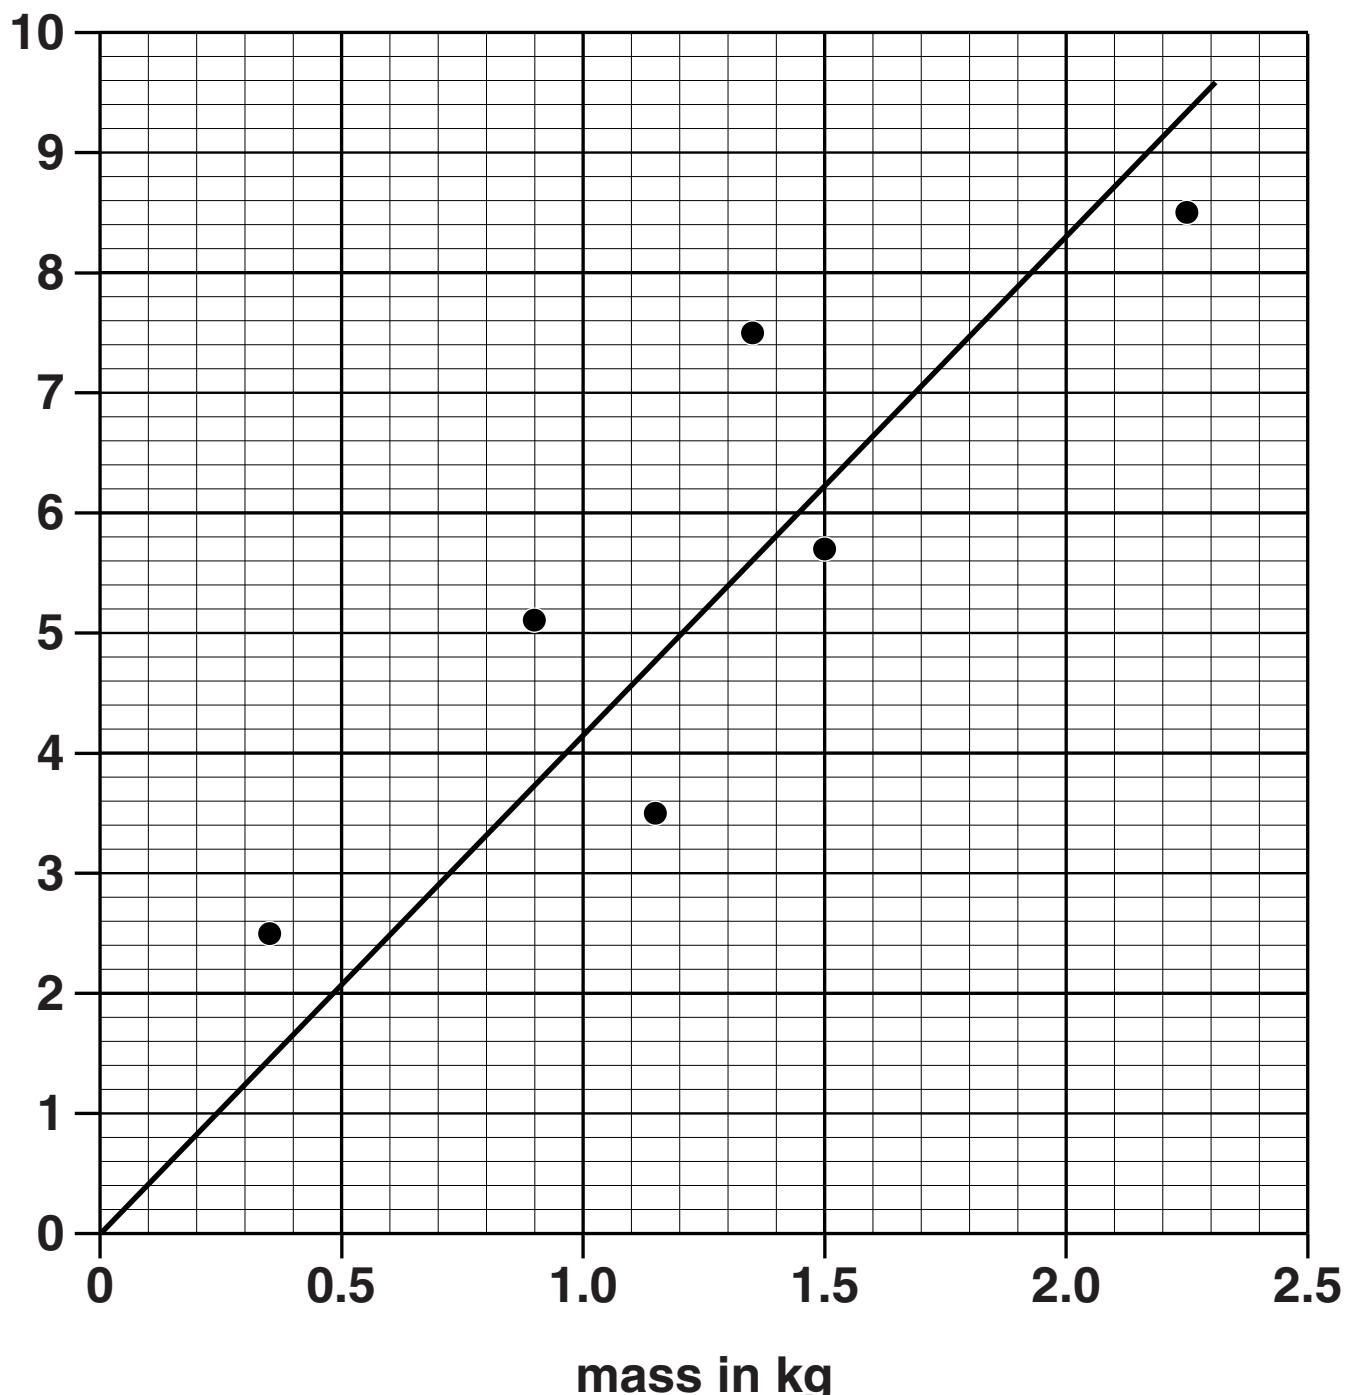

**[2]**

**(c) Bill repeats the experiment with blocks of different masses.**

**He notes the reading of the force-meter each time.**

**Bill plots the results of his experiments on a graph.**

**friction in N**

- (i) He uses his graph to predict the work done on a block of mass 1.3 kg when it moves 0.25 m across the table.

Put a **ring** around the **BEST** value for his calculation.

**1.20 J**

**1.30 J**

**1.35 J**

**3.25 J**

**21.6 J**

[1]

- (ii) Bill realises that he forgot to make sure that all of the blocks were pulled across the table at the same constant speed.

Which property of a block depends on its speed?

Put a **ring** around the correct answer.

**gravitational potential energy**

**mass**

**momentum**

**reaction**

**weight**

[1]

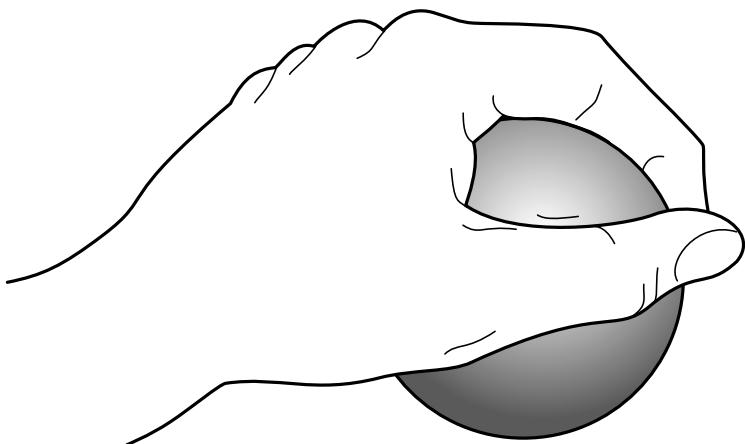

[Total: 5]

**BLANK PAGE**

**TURN OVER FOR QUESTION 9**

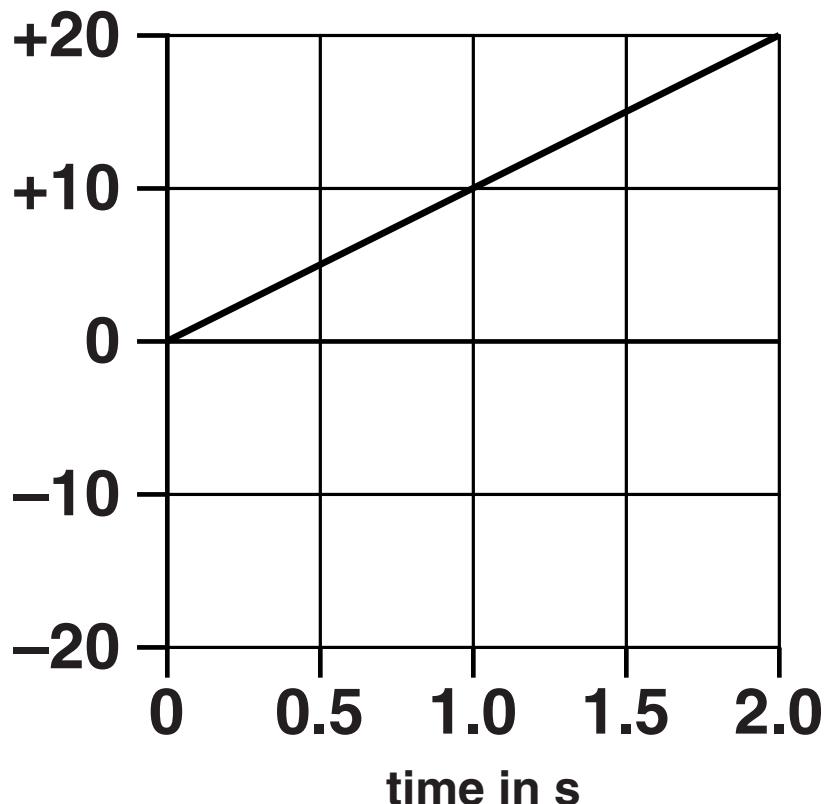

- 9 Chelsea stands on top of a tall building and drops a ball towards the ground.**

**It falls vertically and hits the ground after exactly 2.0 s.**

Here is a velocity-time graph for the ball during its fall.

velocity in m/s

- (a) What is the AVERAGE speed of the ball on its way down?

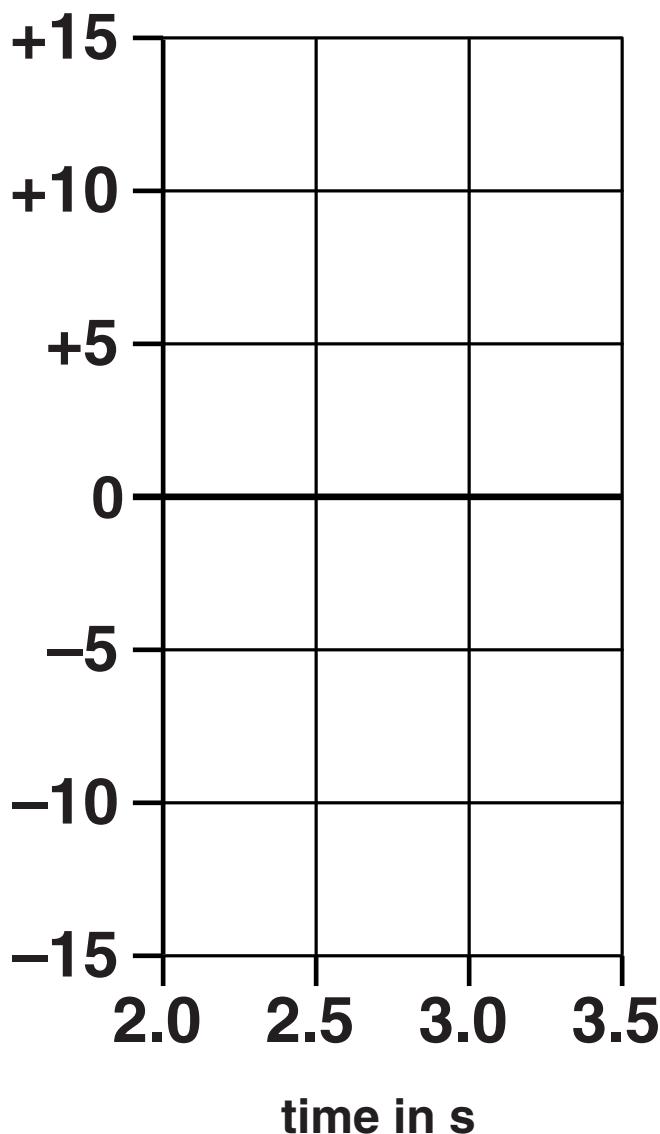

average speed = \_\_\_\_\_ m/s [1]

- (b) After 2 seconds the ball hits the ground and bounces upwards with a velocity of  $-15\text{ m/s}$ .

It slows down steadily and stops 1.5 seconds later.

Sketch the velocity-time graph for the ball after the bounce.

velocity in  $\text{m/s}$

[2]

**(c) Complete the sentence for the ball AFTER it bounces off the ground.**

**Choose words from this list.**

**decreases**

**increases**

**stays the same**

**As the ball rises through the air its gravitational**

**potential energy \_\_\_\_\_ and its**

**kinetic energy \_\_\_\_\_ .**

**[1]**

**[Total: 4]**
