Unit 2 ICT in Organisations

Student Project Proposal Form

Student name:

Date:

User name:

Description of user needs/problem:
General description of the user and the context.
General description of what the user needs and/or the problems.

Teachers should ensure that the problem is of a manageable size and complexity for the student to attempt.

Outline description of solution:
General description of the work that the student intends to do including the broad category of the application required for the solution.

Teachers should ensure that the student is planning to undertake work that is of an appropriate standard and complexity for the problem. The emphasis is on making the system easy for the user to use rather that showing complicated processing skills.

Proposed system

Data inputs required
General description of the inputs that will be required.

Teachers should ensure that the student understands and is able to identify the necessary inputs given the problem.
Teachers should check that the system is of an appropriate size and not too complex.

Processing required
General description of the processing that will be required.

Teachers should ensure that the student understands and is able to identify the necessary processing given the problem. At this stage, only a description of the process is required (e.g. calculation), not the means of achieving it.
Teachers should check that the system is of an appropriate size and not too complex

Unit 2 ICT in Organisations

Outputs required

General description of the outputs that will be required.

Teachers should ensure that the student understands and is able to identify the necessary outputs, given the problem.
Teachers should check that the system is of an appropriate size and not too complex
