Higher Tier Paper 1 Life and Environmental Sciences

**Mark scheme**

June 2023

Version: 1.0 Final

2 3 6 G 8 4 6 5 / 1 H / M S

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

# Information to Examiners

## 1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the examiner make their judgement
- the Assessment Objectives and specification content that each question is intended to cover.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example: where consequential marking needs to be considered in a calculation; or the answer may be on the diagram or at a different place on the script.

In general the right-hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent (for example, a scientifically correct answer that could not reasonably be expected from a student's knowledge of the specification).

## 2. Emboldening and underlining

**2.1** In a list of acceptable answers where more than one mark is available 'any **two** from' is used, with the number of marks emboldened. Each of the following bullet points is a potential mark.

**2.2** A bold **and** is used to indicate that both parts of the answer are required to award the mark.

**2.3** Alternative answers acceptable for a mark are indicated by the use of **or**.
Alternative words in the mark scheme are shown by a solidus eg allow smooth / free movement.

**2.4** Any wording that is underlined is essential for the marking point to be awarded.

# 3. Marking points

## 3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which students have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error / contradiction negates each correct response. So, if the number of errors / contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution?

**[1 mark]**

| Student | Response | Marks awarded |
|---|---|---|
| 1 | green, 5 | 0 |
| 2 | red*, 5 | 1 |
| 3 | red*, 8 | 0 |

Example 2: Name **two** magnetic materials.

**[2 marks]**

| Student | Response | Marks awarded |
|---|---|---|
| 1 | iron, steel, tin | 1 |
| 2 | cobalt, nickel, nail* | 2 |

## 3.2 Use of symbols / formulae

If a student writes a chemical symbol / formula instead of a required chemical name, or uses symbols to denote quantities in a physics equation, full credit can be given if the symbol / formula is correct and if, in the context of the question, such action is appropriate.

## 3.3 Marking procedure for calculations

Marks should be awarded for each stage of the calculation completed correctly, as students are instructed to show their working. At any point in a calculation students may omit steps from their working. If a subsequent step is given correctly, the relevant marks may be awarded.

Full marks are **not** awarded for a correct final answer from incorrect working.

## 3.4 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

### 3.5 Errors carried forward

An error can be carried forward from one question part to the next and is shown by the abbreviation 'ecf'.

Within an individual question part, an incorrect value in one step of a calculation does not prevent all of the subsequent marks being awarded.

### 3.6 Phonetic spelling

Marks should be awarded if spelling is not correct but the intention is clear, **unless** there is a possible confusion with another technical term.

### 3.7 Brackets

(…..) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

### 3.8 Allow

In the mark scheme additional information, 'allow' is used to indicate creditworthy alternative answers.

### 3.9 Ignore

Ignore is used when the information given is irrelevant to the question or not enough to gain the marking point. Any further correct amplification could gain the marking point.

### 3.10 Do <u>not</u> accept

Do **not** accept means that this is a wrong answer which, even if the correct answer is given as well, will still mean that the mark is not awarded.

### 3.11 Numbered answer lines

Numbered lines on the question paper are intended to support the student to give the correct number of responses. The answer should still be marked as a whole.

## 4. Level of response marking instructions

Extended response questions are marked on level of response mark schemes.

- Level of response mark schemes are broken down into levels, each of which has a descriptor.
- The descriptor for the level shows the average performance for the level.
- There are two marks in each level.

Before you apply the mark scheme to a student's answer, read through the answer and, if necessary, annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

**Step 1: Determine a level**

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level.

The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer. Do **not** look to penalise small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level.

Use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 2 with a small amount of level 3 material it would be placed in level 2 but be awarded a mark near the top of the level because of the level 3 content.

**Step 2: Determine a mark**

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the indicative content to reach the highest level of the mark scheme.

You should ignore any irrelevant points made. However, full marks can be awarded only if there are no incorrect statements that contradict a correct response.

An answer which contains nothing of relevance to the question must be awarded no marks.

**Question 1**

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **01.1** | (red blood cells) transport / carry oxygen | ignore reference to haemoglobin | 1 | AO1 4.2.1.4 4.3.3.4 |
| | (white blood cells) defend against pathogens | allow kill pathogens / bacteria / viruses<br>allow produce antibodies / antitoxins<br>allow phagocytosis<br>ignore reference to diseases / infections | 1 | |
| | (platelets) make blood clot | allow clotting<br>allow form scab(s) | 1 | |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **01.2** | arrow drawn from left atrium to left ventricle | do **not** accept more than one arrow | 1 | AO2 4.2.1.3 |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **01.3** | D | | 1 | AO2 4.2.1.3 |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **09.1** | any **two** from:<br>• concentration of acid<br>• type of acid<br>• temperature | ignore time<br><br>allow the acid used<br><br>allow (initial) pH of acid<br>ignore reference to volume / amount of acid<br>ignore reference to alkali / indicator<br>ignore density of the gel / cube(s) | 2 | AO3<br>4.1.3.3<br>4.2.1.2 |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **09.2** | ($4^3$ =) 64 ($cm^3$) | | 1 | AO2<br>4.1.3.3<br>4.2.1.2 |
| | (64 – 27 =) 37 ($cm^3$) | allow correct subtraction from incorrectly calculated volume of cube | 1 | |
| | $\frac{37}{64}$ × 100 | allow correct percentage calculation from incorrect volume changed colour | 1 | |
| | 58 (%) | allow an answer of 57.8125 correctly rounded to any decimal place | 1 | |
| | alternative route<br>($4^3$ =) 64 ($cm^3$) | | | |
| | $\frac{27}{64}$ × 100 | allow 42.1875 correctly rounded to any decimal place<br>allow 42 | | |
| | 100 – 42 | allow correct subtraction from incorrectly calculated percentage | | |
| | 58 (%) | allow an answer of 57.8125 correctly rounded to any decimal place | | |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **09.3** | | allow reference to food molecules or gas(es) or named examples | | |
| | (very) small organisms rely on diffusion through their outer surface for exchange of materials | | 1 | AO1 |
| | (but) as organisms get larger, surface area to volume ratio decreases | | 1 | AO1 |
| | (which) limits the volume (of material) that can be received / removed | allow which means they may not receive / remove enough (material) | 1 | AO2 |
| | (so) exchange surfaces / adaptations are needed | allow named example of exchange surface needed<br>allow have transport system is needed | 1 | AO1<br>4.1.3.3<br>4.2.1.2 |

| Question | Answers | Extra information | Mark | AO/ Spec. Ref. |
|---|---|---|---|---|
| **09.4** | any **two** from:<br>• organisms are not cube shaped | <br>allow cubes and organisms have different shapes | 2 | AO3<br>4.1.3.3<br>4.2.1.2 |
| | • organisms have specialised exchange organs / surfaces | allow (some) organisms have lungs / gills / villi / alveoli / capillaries / leaves / roots<br>allow (some) organisms have transport / circulatory systems | | |
| | • organisms are not the same material all the way through | allow organisms are composed of different tissues / organs | | |
| | • organisms are not made of gel | allow gel (cube) is not a living organism | | |
