INSTRUCTIONS TO CANDIDATES

Use black ink or black ball-point pen. Do not use pencil or gel pen. Do not use correction fluid.

Write your name, centre number and candidate number in the spaces at the top of this page.

Answer all questions.

Answers should be written in the spaces provided. If you run out of space, use the continuation page at the back of the booklet, taking care to number the question(s) correctly.

The intended marks for questions or part questions are given in brackets []. You are advised to divide your time accordingly. The total number of marks available is 100.

You are reminded of the necessity for good written communication and orderly presentation in your answers. Assessment will take into account the quality of written communication used in your answers to question 17.

(<i>a</i>)	A sug	permarket stores information about customers and their purchases. They regularly the same email to thousands of customers.
	(i)	Briefly describe the facility provided by an electronic mail system that would allow the same email to be sent to thousands of customers.
	(ii)	The supermarket saves money by communicating with customers using ema rather than conventional post. Briefly describe two other advantages of usin email rather than conventional post.
(b)	The whic lawfu State supe	Data Protection Act applies to data stored by the supermarket. The supermarke h has notified the Information Commissioner, ensures that their data is fairly an ally processed and processed for limited purposes. four other principles of the Act that will apply to the data stored by the rmarket.
•••••		

(a)	Name the most suitable data type for the storage of the following data about a compa employee:	ny
	the forename of the employee;	[1]
	a single letter code for their pay scale;	[1]
	whether the employee is a member of the company pension plan, for example TRUE,	,
		[1]
	the proportion of their pay that they contribute to the pension plan, for example &	3∙5;
		[1]
	the number of whole years in the company pension plan.	[1]
(b)	Compare the amount of memory required to store an employee forename, for exam Gareth, compared with the single letter code for their pay scale, for example B.	ple [2]

••••			
(1	b)	Briefly describe what happens to a file when it is compressed and give one reason for compressing a file. [2]	
••••			
((c)	Explain the term <i>fragmentation</i> and briefly describe the effect that fragmentation will have on disc access. [2]	

A dental practice currently stores patients' details on paper which are kept in a filing cabinet. 4. It is time consuming for the receptionist to find the required paperwork for a patient and sometimes difficult to read the handwriting. The dentist has purchased a computerised database system to store all the patients' details. Briefly describe one other possible problem with the current paper-based system and (a)describe how the new database system could solve this problem. [2] *(b)* The new system will verify and validate some of the data input. It is important that the patient's telephone number is input correctly. Describe a suitable validation check that could be carried out on the patient's (i) telephone number giving an example of invalid data that would be detected by this check. [2] Describe a suitable verification check that could be carried out on the telephone (ii) number and describe how this check detects input errors. [2]

(a)	State the most appropriate organisation for the following files:	
	unsorted transaction file; [1]
	master file. [1	
(b)	Records can be fixed or variable length. Describe two advantages of using fixed length records and two advantages of using variable length records. [4]	 h ŀ]

11. Below is a segment of an algorithm.

```
input T

set i = 1

set X = 0

set Y = false

repeat

if T = A[i] then

set X = i

set Y = true

else

set i = i + 1

endif

until (Y = true) OR (i > 7)
```

A =

25

Complete the table below to show the value of each variable when the algorithm is performed on the data given.

The value input for T is 81. The array A contains the values as shown with A[1] containing 25, etc.

12. Below is a segment of an algorithm.

 Image: set EntryAllowed = False
 if (Membership = Gold) then set EntryAllowed = True

 if ((Membership = Silver) AND (Day = Weekday) AND (Time < 17)) OR</td>
 ((Membership = Silver) AND (Day = Weekend)) then set EntryAllowed = True

 If (Membership = Bronze) AND (Day = Weekend) then set EntryAllowed = True
 If (Membership = Bronze) AND (Day = Weekend) then set EntryAllowed = True

Write down the value of EntryAllowed after the segment of the algorithm has executed for the following data:

Membership: Gold	Day: Weekday	Time: 14;	 [1]
Membership: Silver	Day: Weekday	Time: 11;	 [1]
Membership: Bronze	Day: Weekday	Time: 12;	 [1]
Membership: Silver	Day: Weekend	Time: 12;	 [1]
Membership: Silver	Day: Weekday	Time: 19.	 [1]
