A.M. FRIDAY, 16 May 2014

2 hours 30 minutes plus your additional time allowance

ADDITIONAL MATERIALS

In addition to this examination paper, you will need:

a clean copy (i.e. with no annotation) of the texts you have studied for Section B;

you will need a WJEC 20-page answer booklet (pink), which has been specifically designed for this examination paper. No other answer booklet should be used. Should you run out of space, use a standard 4-page continuation booklet.

INSTRUCTIONS TO CANDIDATES

Use black ink, or black ball-point pen or your usual method.

Answer TWO questions, one from Section A and one from Section B.

Write your answer in the separate answer book provided, following instructions on the front of the answer book.

INFORMATION FOR CANDIDATES

All questions in Section A and Section B carry 40 marks.

In both sections, you will be assessed on your ability to:

select and apply relevant concepts and approaches from integrated linguistic and literary study, using appropriate terminology and accurate, coherent written expression (AO1)

demonstrate detailed critical understanding in analysing the ways in which structure, form and language shape meanings in a range of spoken and written texts (AO2)

use integrated approaches to explore relationships between texts, analysing and evaluating the significance of contextual factors in their production and reception (AO3).

You are reminded that assessment will take into account the quality of written communication used in your answers.

Section A: Poetry pre-1900 (closed text) and unseen text

Answer EITHER question 1 OR question 2.

EITHER,

01 TEXT A: the poem THE MOWER AGAINST GARDENS by Andrew Marvell.

TEXT B: a newspaper article PUT YOUR FEET UP IN AN ENGLISH GM GARDEN from The Daily Telegraph in 2004

COMPARE AND CONTRAST TEXT A AND TEXT B.

In your response you should:

- **show understanding of the meanings in each text;**
- **explore the influence of different contextual factors;**

TEXT A

THE MOWER AGAINST GARDENS
ANDREW MARVELL (1621-1678)

Luxurious man, to bring his vice in use,
 Did after him the world seduce;
And from the fields the flowers and plants allure,
 Where Nature was most plain and pure.
He first enclosed within the garden's square
 A dead and standing pool of air,
And a more luscious earth for them did knead,
 Which stupefied them while it fed.
The pink grew then as double as his mind;
 The nutriment did change the kind.
With strange perfumes he did the roses taint;
 And flow'rs themselves were taught to paint.
The tulip, white, did for complexion seek,
 And learned to interline its cheek;
Its onion root they then so high did hold,
 That one was for a meadow sold:
Another world was searched, through oceans new,
 To find the Marvel of Peru;
And yet these rarities might be allowed
 To man, that sovereign thing and proud,
Had he not dealt between the bark and tree,
 Forbidden mixtures there to see.
No plant now knew the stock from which it came;
 He grafts upon the wild the tame:
That the uncertain and adulterate fruit

Might put the palate in dispute.
His green Seraglio has its eunuchs too,
Lest any tyrant him outdo;
And in the cherry he does Nature vex,
To procreate without a sex.
'Tis all enforced, the fountain and the grot,
While the sweet fields do lie forgot,
Where willing Nature does to all dispense
A wild and fragrant innocence;
And fauns and fairies do the meadows till,
More by their presence than their skill.
Their statues, polished by some ancient hand,
May to adorn the gardens stand,
But, howsoe'er the figures do excel,
The gods themselves with us do dwell.

TEXT B: an article from THE DAILY TELEGRAPH newspaper, 2004.

Put your feet up in an English GM garden

Science may take the hard work out of horticulture, reports David Derbyshire

The perfect garden, with its immaculate lawns, manicured hedges and vibrant borders comes at a heavy, and back-breaking, price. For every hour spent enjoying its calm and tranquility, at least a dozen more are spent on the hated chores of watering, mowing, edging and weeding. But that could be about to change. According to a leading botanist, traditional gardens are about to get a GM makeover. Within a few years, lawns will need mowing once or twice a month, geraniums will survive the harshest winter frosts, roses will bloom longer and watering cans will be banished to the shed along with shears, hoe and sprinkler.

Some scientists believe the benefits to horticulture from genetic modification will be so clear that garden centres will achieve what the biotech industry has so far failed to do – make GM acceptable.

Dr Phil Gates, a plant biologist at Durham University, will make the case for the genetic manipulation of plants at a debate today hosted by the Royal Horticultural Society in London.

He says, “In gardening I doubt whether there will be any

major GM uses in food, but there may be considerable benefits for ornamental plants.”

A survey of 500 gardeners carried out by the RHS found that lawns were the least enjoyed feature of gardens, followed by hedges. “Mowing the lawn is an incredible, pointless activity – and it’s extremely wasteful,” said Dr Gates. “It’s a waste of energy and a source of noise pollution.”

GM grass could be the answer. American biotech companies have already produced GM lawns that grow slower than conventional grasses and are tolerant to droughts. Although they were designed for the golf industry, they could have uses in gardens.

Britain’s changing climate, with less rain expected over the coming summers, will make the appeal of GM lawns even stronger, Dr Gates believes. A similar technology could be used to develop slow growing hedges – ending another nuisance chore and a source of neighbourly rows.

GM technology could help hayfever sufferers, he will argue. Pollen-free plants and trees would ease the agony of itching eyes and runny noses because the plants would be sterile.

Scientists have already created GM flowers that stay fresh for longer, but GM also offers the chance of new colours – bringing the elusive blue rose or shrubs with twice as many flowers as normal.

Other benefits include frost tolerant herbaceous plants, and plants that are able to absorb nutrients more efficiently and so need less fertiliser. “I suspect

that gardeners will be more responsive to this kind of technology than other consumers,” says Dr Gates. “Gardeners have a long history of innovation and novelty. They have no scruples about crossing species boundaries or creating mutants. Many roses out there are hybrids of up to six species.”

New organic technology could also make gardeners less dependent on chemical pesticides and fertilisers.

02 TEXT C: the poem DYING by Emily Dickinson.

TEXT D: an extract from the novel THE ENGLISH PATIENT by Michael Ondaatje published in 1992. THE ENGLISH PATIENT is about several characters from different countries who live out the end of World War II together in an Italian villa. In this extract, taken from the end of the novel, the English patient dies.

Compare and contrast Text C and Text D.

TEXT C**DYING****EMILY DICKINSON (1830-1886)**

I heard a fly buzz when I died.
 The stillness in the room
Was like the stillness in the air
 Between the heavens of storm.

The eyes around had wrung them dry,
 And breaths were gathering firm
For that last onset when the king
 Be witnessed in the room.

I willed my keepsakes, signed away
 What portion of me be
Assignable; and then it was
 There interposed a fly

With blue, uncertain stumbling buzz
 Between the light and me;
And then the windows failed; and then
 I could not see to see.

TEXT D: an extract from the novel The English Patient by Michael Ondaatje

The villa drifts in darkness. In the hallway by the English patient's bedroom the last candle burns, still alive in the night. Whenever he opens his eyes out of sleep, he sees the old wavering yellow light.

For him now the world is without sound, and even light seems an unneeded thing. He will tell the girl in the morning he wants no candle flame to accompany him while he sleeps.

Around three a.m. he feels a presence in the room. He sees, for a pulse of a moment, a figure at the foot of his bed, against the wall or painted onto it perhaps, not quite discernable in the darkness of foliage beyond the candlelight. He mutters something, something he had wanted to say, but there is silence and the slight brown figure, which could be just a night shadow, does not move. A poplar. A man with plumes. A swimming figure.

He stays awake in any case this night, to see if the figure moves towards him. Ignoring the tablet that brings painlessness, he will remain awake till the light dies out and the smell of candle smoke drifts into his room and into the girl's room farther down the hall. If the figure turns around there will be paint on his back,

where he slammed in grief against the mural of trees.¹
When the candle dies out he will be able to see this.

His hand reaches out slowly and touches his book and returns to his dark chest. Nothing else moves in the room.

¹ The English patient has previously described how he placed the body of his dying lover, Katherine Clifton, in a cave that had been painted with several pictures, including a mural of trees.
