# Mark Scheme

#### 2005 examination - June series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

## 3528/H - Higher Tier Written Paper (Short Course)

| 1.  |   |         |
|-----|---|---------|
| a.  | These points.   | 3 marks |
|     | D is joined to connects to the Internet                     |         |
|     | C is joined to contains the processor, memory and hard disk |         |
|     | G is joined to selects from a menu                          |         |
| b.  |   |         |
| i.  | This point.   | 1 mark  |
|     | Spreadsheet   |         |
| ii. | This point.   | 1 mark  |
|     | Web browser or e-mail                                       |         |
| c.  | Any reasonable. For example:                                | 3 marks |
|     | Backup, 1m  |         |
|     | Virus protection, 1m  |         |
|     | Specific example of physical security, 1m                   |         |
|     | Username and password, 1m                                   |         |
|     | Firewall, 1m  |         |
|     | Spyware, 1m   |         |
|     | NOT: food and drink   |         |
|     | NOT: encryption   |         |
|     | Total for this question:                                    | 8 marks |

| 2.   |  |         |
|------|--|---------|
| a.   |  |         |
| i.   | This point.  | 1 mark  |
|      | The average time customers have to queue = 12                                    |         |
| ii.  | This point.  | 1 mark  |
|      | =B3*B4 or B3*B4 or equivalents   |         |
|      | NOT: B3xB4; sum(B3*B4)   |         |
| iii. | These points or their equivalents:   | 2 marks |
|      | Open more checkouts/Fit more checkouts in the supermarket, 1m                    |         |
|      | Staff work faster/Put experienced staff that can process customers faster on all |         |
|      | the checkouts, 1m  |         |
|      | Improve the speed at which the checkout technology works, 1m                     |         |
| b.   | Any reasonable. For example:   | 2 marks |
|      | Data to be collected: Time to process a customer                                 |         |
|      | Manual method: person times using a stop watch.                                  |         |
|      | Automatic method: start and end of processing a customer detected by the         |         |
|      | computer.  |         |
| c.   | Any reasonable. For example:   | 2 marks |
|      | Understanding of model suggests capacity of supermarket depends on number        |         |
|      | of checkouts, or speed at which customers go through checkout. So in designing   |         |
|      | the supermarket:   |         |
|      | Install high speed checkout technology (training staff to work faster would not  |         |
|      | be part of the supermarket design although features of the checkout that enabled |         |
|      | them to work faster would be).   |         |
|      | Use model to work out the number of checkouts needed.                            |         |
|      | Total for this question:   | 8 marks |

| 3.  |  |         |
|-----|--|---------|
| a.  |  |         |
| i.  | This point.  | 1 mark  |
|     | Parcel_Number  |         |
| ii. | This point.  | 1 mark  |
|     | The key field identifies the parcel.   |         |
| b.  |  |         |
| i.  | Any reasonable. For example:   | 2 marks |
|     | The <b>Parcel_Number</b> has the same value as in an existing record.                        |         |
|     | The Parcel_Number must be unique.  |         |
| c.  |  |         |
| i.  | Any reasonable. For example:   | 1 mark  |
|     | The content of the <b>Posted_At</b> field and the <b>Content</b> field have been transposed. |         |
|     | The <b>Content</b> of the parcel is unlikely to be Manchester.                               |         |
|     | XLOG has only 5 offices and none of them is in a town called Medicines.                      |         |
| ii. | This point.  | 1 mark  |
|     | Sometimes, records that should be selected by a search condition will not be                 |         |
|     | selected.  |         |
| d.  |  |         |
| i.  | This point.  | 1 mark  |
|     | Rooney and no others, 1m   |         |
| ii. | This point.  | 1 mark  |
|     | Patel, Delker and no others, 1m  |         |
|     | Total for this question:   | 8 marks |

| 4. |  |         |
|----|--|---------|
| a. | Any reasonable. For example:                                   | 2 marks |
|    | Words A and B have different fonts                             |         |
|    | Words A and B have different sizes of text                     |         |
|    | Word B is underline whereas word A is not                      |         |
| b. | This point.  | 1 mark  |
|    | word art   |         |
| c. | These points in this order.                                    | 2 marks |
|    | bullet   |         |
|    | centred  |         |
| d. | Any reasonable. For example:                                   | 2 marks |
|    | The text will be more readable when projected as it is larger. |         |
|    | Bullets help prompt the presenter.                             |         |
|    | Bullets help structure the presenter's talk.                   |         |
|    | Bullets help summarise the talk for the audience.              |         |
|    | Total for this question:                                       | 7 marks |

| 5.       |  |         |
|----------|--|---------|
| b.<br>i. | Any reasonable. For example:  Turns and clears the end of the settee, e.g. R F8 (or F9 or F10), 1m  Moves behind the settee and stops at point B, e.g. R F6 R F4 (or F5 or F6 respectively), 1m  Answer clear but incorrect syntax, -1m  This point.  Puts cross on underside of robot vacuum cleaner ahead of the front wheels. |         |
|          | The centre of the cross must be on the underside within 1mm of the edge but not on the corner.  Moves in this direction  |         |
|          | Floor  |         |
| ii.      | Any reasonable. For example: Light, distance   | 1 mark  |
| iii.     | Any reasonable. For example: Stop.   | 1 mark  |
| iv.      | These points.  Description is in this context, 1m  Description includes sensing, 1m  Description includes reaction, 1m  Description makes clear that feedback is a cyclical process, 1m  | 3 marks |
|          | Total for this question:   | 8 marks |

| 6.  |  |         |
|-----|--|---------|
| a.  |  |         |
| i.  | This point.  | 1 mark  |
|     | mouse  |         |
| ii. | This point.  | 1 mark  |
|     | speakers   |         |
| b.  | Any reasonable. For example:   | 1 mark  |
|     | A touch screen allows input, whereas a standard monitor screen does not. |         |
| c.  | These points.  | 4 marks |
|     | Star or line topology with a file server and 3 computers, 1m             |         |
|     | Other networked hardware, e.g. printer, 1m each                          |         |
|     | Other local hardware, e.g. scanner, 1m each                              |         |
|     | Connection to another network, 1m  |         |
|     | Total for this question:   | 7 marks |

| 7. |   |   |                                     |         |  |  |
|----|---|---|-------------------------------------|---------|--|--|
| a. | These points in this order.   |   | 2 marks                             |         |  |  |
|    | systems analysis and design   |   |                                     |         |  |  |
| 1  |   | mplementation                                   |                                     | 2 1     |  |  |
| b. | These po  | oints.  |                                     | 2 marks |  |  |
|    | Label   | Statement                                       |                                     |         |  |  |
|    | В   | Identify the car as it enters the               | Given                               |         |  |  |
|    |   | city centre                                     |                                     |         |  |  |
|    | A   | Record the time                                 |                                     |         |  |  |
|    | F   | Identify the car as it leaves the               | F followed by E but not             |         |  |  |
|    |   | city centre                                     | necessarily adjacent, 1m            |         |  |  |
|    | A   | Record the time                                 |                                     |         |  |  |
|    | E   | Calculate the time the car has                  | Complete and correct, 1m            |         |  |  |
|    | D   | been in the city centre                         | _                                   |         |  |  |
|    | C   | Calculate the charge Send the motorist the bill | Given                               |         |  |  |
|    |   | Send the motorist the oni                       | Given                               |         |  |  |
| c. | Any reas  | onable advantage. For example:                  |                                     | 3 marks |  |  |
|    | The council increases its income.   |   |                                     |         |  |  |
|    | Bills can   | be sent automatically to motorists.             |                                     | or 2    |  |  |
|    | There is likely to be less congestion from cars in the city centre.                   |   |                                     |         |  |  |
|    |   | uncil gets its money from congestion            | n charges, increases in council tax |         |  |  |
|    | may be l  |   |                                     |         |  |  |
|    |   | e city centre, and the police                   |                                     |         |  |  |
|    | informed, so that cars can be returned to their owners.                               |   |                                     |         |  |  |
|    | It could I  | be easier to park.                              |                                     |         |  |  |
|    | Any resconship disadvantage For example:  |   |                                     |         |  |  |
|    | Any reasonable disadvantage. For example: The ICT system will be expensive to set up. |   |                                     |         |  |  |
|    | The council will be unpopular with motorists and may not be re-elected.               |   |                                     |         |  |  |
|    | Fewer people in the city centre may make the city uninteresting, and even more        |   |                                     |         |  |  |
|    | people will stay away.  |   |                                     |         |  |  |
|    | Shops in the city centre may have fewer customers.                                    |   |                                     |         |  |  |
|    | Cars are tracked, so that there is less privacy for the motorist.                     |   |                                     |         |  |  |
|    | Bills are sent to the owner of the vehicle who may not be the driver.                 |   |                                     |         |  |  |
|    | There could be errors identifying a car.  |   |                                     |         |  |  |
|    |   |   | Total for this question:            | 7 marks |  |  |

| 8. |  |   |
|----|--|---|
| a. | Any reasonable. For example. This might work because: Those few who have access can be monitored. All the information available on the Web may not be available in the language spoken by traditional societies. Educated office workers are more likely to speak English, so that restrictions are well targeted.   | 3 marks<br>max 2 adv<br>or 2<br>disadv      |
|    | This might not work because: Restricting the people who have access to the Internet and the Web does not prevent those who have access looking at restricted information. There are so many different ways to connect to the Internet that restrictions can be avoided. Educated office workers are more likely to speak English, so that if there was   |   |
|    | wider access it might not make monitoring harder.  |   |
| b. | Any reasonable advantage. For example: Standardisation/automated manufacturing leads to economies of scale and goods are cheaper.  Manufacturers have access to larger markets using the Internet. Jobs can be outsourced around the world using international ICT networks. This leads to more jobs in developing countries.  The web can highlight common ground between different cultures. Using the web, people can understand other cultures and will be more tolerant of these so that war is less likely.  A great diversity of opinion is expressed on the Web. People who are isolated can find others with similar attitudes. For example, those working against oppression can contact others outside their society for assistance and support.  | 4 marks<br>max 3 adv<br>and max 3<br>disadv |
|    | Any reasonable disadvantage. For example:  Widespread access to information about social and political democracy on the web may undermine social stability in non democratic countries.  The web leads to standardisation, and national and cultural identity is eroded as the differences between peoples' ways of life diminish.  The Web can highlight differences between cultures making it harder to avoid conflict. For example, families may be split up when people adopt attitudes to marriage that are common in other countries but not in their own cultures.  Access to on line shopping can lead to frustration in countries where most people earn very low wages and cannot afford to buy the goods available.  Access to international on line gambling may undermine traditional values.  Jobs can be outsourced around the world using international ICT networks. This leads to job losses in developed countries, and the rapid movement of jobs around the world which can be destabilising.  In order to access the Internet, it is necessary to invest in telecommunications and power networks. This may cost too much for a poor country.  A great diversity of opinion is expressed on the Web. People can find others with similar attitudes. Terrorism can be organised more easily on a global scale. |   |
|    | Total for this question:   | 7 marks                                     |
