**Mark Scheme for the Units**

---

**June 2006**

**1492/1496/MS/R/06**

OCR (Oxford, Cambridge and RSA Examinations) is a unitary awarding body, established by the University of Cambridge Local Examinations Syndicate and the RSA Examinations Board in January 1998. OCR provides a full range of GCSE, A level, GNVQ, Key Skills and other qualifications for schools and colleges in the United Kingdom, including those previously provided by MEG and OCEAC. It is also responsible for developing new syllabuses to meet national requirements and the needs of students and teachers.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

**Applied GCSE (Double Award) Manufacturing (1496)**

### **MARK SCHEMES FOR THE UNITS**

<b>Unit</b>	<b>Content</b>	<b>Page</b>
4868/4880	Application of Technology	1
*	Grade Thresholds	10

**Mark Scheme 4868/4880**  
**June 2006**

Question	Response	mark
1	<p>For each chosen sector</p> <p>1 mark for correctly identifying product for sector (not repeated)</p> <p>1 mark for named technology clearly used in that sector or used by the product stated.</p> <p>2 marks for each of 2 benefits – may be to producer, customer or end user, workforce, product or environment.</p> <p>Eg Biological and chemical sector</p> <p>fizzy drinks bottle</p> <p>PET plastic</p> <p>Lightweight yet transparent as glass</p> <p>Can be recycled to make textiles</p> <p>Automotive engineering</p> <p>Alloy wheels</p> <p>Steel alloy, Mg, Cr</p> <p>High strength to weight ratio</p> <p>Attractive appearance appeals to end users</p>	<p>1</p> <p>1</p> <p>2</p> <p>2</p> <p>1</p> <p>1</p> <p>2</p> <p>2</p>

Look for a "point" = 1 mark and some "extension" = 2<sup>nd</sup> mark or 2<sup>nd</sup> (different) point for 2<sup>nd</sup> mark.

3	<p>3 marks for each method of assessment:  1 for showing understanding of property  1 for how assessment carried out  1 for what is being observed/measured/compared  e.g.</p> <p><b>heaviness</b>  can be assessed by weighing the product with scales / compared to similar product or prescribed data / basic testing</p> <p><b>surface feel</b>  can be assessed by running a finger across the surface to check for roughness/ bumps/ softness/warmth to touch / safety/hazard</p> <p><b>scratch and wear resistance</b>  can be measured by rubbing a test piece with abrasive repeatedly. Checking subsequent damage/results / comparing with an original / or until fails</p> <p><b>the structure</b>  may be assessed by disassembly looking for how held together/ thickness of components / comparison with similar product / template comparison / visual checking / NDT / testing to destruction / testing with pressure / weights etc.</p>	<p>3</p> <p>3</p> <p>3</p> <p>3</p>
---	--	-------------------------------------

4	<p>1 mark for each point covered relevant to each section (do not award twice for same point, but be flexible across areas.) 2 marks for points with expansion on purpose, justification, use.</p> <p>Notes: responses will vary depending on product shown. Correct and specific terms should be used where appropriate to engineering/manufacturing eg polyurethane, fixing, adhesive. Materials should be specific (or with an important property given as below) components should be named (rather than generic terms), how used could, for example, involve structure, purpose or quality.</p> <p>For example from the kettle shown in the question:</p> <table border="1" data-bbox="316 524 1273 1599"> <tr> <td data-bbox="316 524 794 667"><i>Thermochromic panel changes colour over 80°C. energy saving – know when it's already hot enough</i></td> <td data-bbox="794 524 1273 667">Technology (+ how used) (2)</td> </tr> <tr> <td data-bbox="316 667 794 810"><i>Double-walled with air gap for insulation</i> • Conserves energy • Cool to touch for safety</td> <td data-bbox="794 667 1273 810">Technology (+ how used) (2)</td> </tr> <tr> <td data-bbox="316 810 794 954"><i>Self coloured polymer body – injection moulded</i> Material/technology (2)</td> <td data-bbox="794 810 1273 954">Technology/technology (2)</td> </tr> <tr> <td data-bbox="316 954 794 1070"><i>Efficient ceramic element placed inside to prevent scaling and metal in water</i></td> <td data-bbox="794 954 1273 1070">Technology/structure(+just) (2)</td> </tr> <tr> <td data-bbox="316 1070 794 1146"><i>ON/OFF switch</i></td> <td data-bbox="794 1070 1273 1146">component (1)</td> </tr> <tr> <td data-bbox="316 1146 794 1254"><i>Ergonomically moulded handle</i> Structure (1)</td> <td data-bbox="794 1146 1273 1254">Structure (1)</td> </tr> <tr> <td data-bbox="316 1254 794 1330"><i>Kettle lifts from base, no cord trailing</i></td> <td data-bbox="794 1254 1273 1330">Structure (+ how used) (2)</td> </tr> <tr> <td data-bbox="316 1330 794 1438"><i>Efficient ceramic element placed inside to prevent scaling and metal in water</i></td> <td data-bbox="794 1330 1273 1438">Material/technology (+ how used) (2)</td> </tr> <tr> <td data-bbox="316 1438 794 1514"><i>Volume indicator helps to save energy (only fill when empty)</i></td> <td data-bbox="794 1438 1273 1514">Structure (+ how used) (2)</td> </tr> <tr> <td data-bbox="316 1514 794 1599">General layout sketch</td> <td data-bbox="794 1514 1273 1599">Structure (1)</td> </tr> </table> <p>Technologies Materials Structure/form</p>	<i>Thermochromic panel changes colour over 80°C. energy saving – know when it's already hot enough</i>	Technology (+ how used) (2)	<i>Double-walled with air gap for insulation</i> • Conserves energy • Cool to touch for safety	Technology (+ how used) (2)	<i>Self coloured polymer body – injection moulded</i> Material/technology (2)	Technology/technology (2)	<i>Efficient ceramic element placed inside to prevent scaling and metal in water</i>	Technology/structure(+just) (2)	<i>ON/OFF switch</i>	component (1)	<i>Ergonomically moulded handle</i> Structure (1)	Structure (1)	<i>Kettle lifts from base, no cord trailing</i>	Structure (+ how used) (2)	<i>Efficient ceramic element placed inside to prevent scaling and metal in water</i>	Material/technology (+ how used) (2)	<i>Volume indicator helps to save energy (only fill when empty)</i>	Structure (+ how used) (2)	General layout sketch	Structure (1)	<p>4 6 4</p>
<i>Thermochromic panel changes colour over 80°C. energy saving – know when it's already hot enough</i>	Technology (+ how used) (2)																					
<i>Double-walled with air gap for insulation</i> • Conserves energy • Cool to touch for safety	Technology (+ how used) (2)																					
<i>Self coloured polymer body – injection moulded</i> Material/technology (2)	Technology/technology (2)																					
<i>Efficient ceramic element placed inside to prevent scaling and metal in water</i>	Technology/structure(+just) (2)																					
<i>ON/OFF switch</i>	component (1)																					
<i>Ergonomically moulded handle</i> Structure (1)	Structure (1)																					
<i>Kettle lifts from base, no cord trailing</i>	Structure (+ how used) (2)																					
<i>Efficient ceramic element placed inside to prevent scaling and metal in water</i>	Material/technology (+ how used) (2)																					
<i>Volume indicator helps to save energy (only fill when empty)</i>	Structure (+ how used) (2)																					
General layout sketch	Structure (1)																					

5	<p>a) (i) CAD Computer aided design</p> <p>(ii) 2 marks for each benefit described</p> <ul style="list-style-type: none"> <li>• designs can be modified without redrawing</li> <li>• files can be sent electronically for approval/comment /CAM (speed)</li> <li>• collaborative working without meeting</li> <li>• testing without making / modelling</li> <li>• cost improvements ref. meetings/travel/less staff</li> </ul> <p>1 for simple statement/single word +1 for justification (2 x 2)</p> <p>b) (i) CAM Computer aided manufacture:</p> <p>(ii) 2 marks for each benefit described</p> <ul style="list-style-type: none"> <li>• designs can be used direct from CAD files</li> <li>• product can be changed by changing the file</li> <li>• fewer skilled workers required</li> <li>• product consistent quality in continuous production</li> </ul> <p>(1 for simple statement/single word) (2 x 2) (Not improved speed)</p> <p>c) CIM/CIE: computer integrated engineering/manufacturing: development, design, production planning, material sourcing and control, processing, assembly, finishing, packaging and dispatch all linked through using ICT with a single set of data. Key points for a mark each:</p> <ul style="list-style-type: none"> <li>• integration</li> <li>• Whole production process,</li> <li>• ICT</li> <li>• Single data set (4 x 1)</li> </ul>	<p>1</p> <p>4</p> <p>1</p> <p>4</p> <p>4</p>
---	---	--

6	<p>(a) <b>How / why used</b> Robot technologies are used for a range of <u>repetitive</u> jobs in <u>continuous</u> production, for example welding car body panels. They can be <u>programmed</u> for different jobs and can be used in <u>environments</u> where humans may be harmed.</p> <p>Look for reference to:</p> <ul style="list-style-type: none"> <li>• Repetitive production</li> <li>• Continuous production</li> <li>• Programmed to do different jobs</li> <li>• Harmful environments</li> </ul> <p>Comments related to faster / more products produced / more accurate <b>must</b> be a <i>comparative</i> comment. E.g. Robotics can produce more products which are the same in a faster time <b>than</b> a manual workforce.</p> <p><b>Award up to 1 mark for <u>ONE</u> example of use E.g.</b></p> <ul style="list-style-type: none"> <li>• <b>Used to make cars</b></li> <li>• <b>Used to spay paint car bodies</b></li> </ul> <p><b>Company</b></p> <p>(b) 2 marks for each benefit described. e.g.</p> <ul style="list-style-type: none"> <li>• consistency of product quality</li> <li>• overall cost savings compared with manual methods</li> <li>• flexible automatic production, compared with buying new dedicated machines</li> <li>• can be programmed to make different specs on same line</li> </ul> <p>One benefit only per part question with 2<sup>nd</sup> mark for justification</p> <p><b>Workforce</b></p> <p>(c) 2 marks for each benefit described. e.g.</p> <ul style="list-style-type: none"> <li>• workers retrained to work with robots will earn more</li> <li>• avoid risks of working in hazardous environments</li> <li>• if company competitive they will not lose their jobs</li> <li>• less repetitive work</li> </ul>	<p>4</p> <p>2</p> <p>2</p> <p>2</p> <p>2</p>

7	<p><b>Possibly treat (a) as a whole and reward any correct point. 2<sup>nd</sup> / 3<sup>rd</sup> marks for justification.</b></p> <p>a) 3 marks for each factor described clearly e.g.</p> <ul style="list-style-type: none"> <li>• market for product – will new technology open up new markets?</li> <li>• Equipment costs/Operational costs/breakeven point</li> <li>• Effect on product quality/production rate/reject rate</li> <li>• Space/operator/ equipment availability</li> <li>• Environmental considerations less waste / less pollution from workers cars / more noise from machines / more waste produced from more products – subsequent disposal</li> <li>• Loosing customers who prefer the “personal touch”</li> <li>• Costs associated with training workforce accordingly</li> </ul> <p>b) 3 marks for clear explanation e.g.</p> <ul style="list-style-type: none"> <li>• Some tasks cannot be carried out mechanically, for example tensioning elastic in modern underwear</li> <li>• some products are aimed at exclusive markets/only made as one-offs, for example hand made shoes, haute couture</li> </ul> <p>1 for appropriate example plus up to two more for justification</p>	<p>3</p> <p>3</p> <p>3</p> <p>3</p>
---	--	-------------------------------------

8	<p>Both a) and b) discussion. Award 6 marks:          3 for raising relevant issues          2 for explaining why they are relevant and 1 for a specific example supporting the answer.          Allow flexibility in interpretation</p> <p>a) global environment</p>			6
Control systems can reduce emissions from production plants/vehicles etc	Less damage to the environment than predicted in the past	Production of unnecessary products		
New materials reduce the amount of waste/can be recycled/ come from sustainable sources	Less depletion of natural resources			
Improved communications means production no longer has to be local.	Large companies have moved production to areas where environmental protection laws are less harsh	Same environmental effect, just different place		
Modern manufacturing methods make it easy to modify products	Become out of date more quickly – increases consumerism			
More advertising methods encourages increased consumerism	More resources used			
b) society				
Internet sales	Can order new products from across the world			
Large companies have outlets worldwide	Difference between cultures less marked			
High quality products available at lower prices/economies of scale	Increased affordability to new groups of people	Mobile phones used to be a luxury.		
Communications technology - many more ways of communicating	Advertising and product promotion is becoming very sophisticated	Pressure to consume more		
Production lines work continuously	Workers have to keep up	Increasing stress on individuals		
			6
