**OXFORD CAMBRIDGE AND RSA EXAMINATIONS
GCSE**

A181/02

**TWENTY FIRST CENTURY SCIENCE
PHYSICS A**

Modules P1 P2 P3 (Higher Tier)

FRIDAY 20 JANUARY 2012: Morning

DURATION: 1 hour

SUITABLE FOR VISUALLY IMPAIRED CANDIDATES

**Candidates answer on the Question Paper.
A calculator may be used for this paper.**

OCR SUPPLIED MATERIALS:

None

OTHER MATERIALS REQUIRED:

Pencil

Ruler (cm/mm)

READ INSTRUCTIONS OVERLEAF

INSTRUCTIONS TO CANDIDATES

- Write your name, centre number and candidate number in the boxes on the first page. Please write clearly and in capital letters.
- Use black ink. HB pencil may be used for graphs and diagrams only.
- Answer ALL the questions.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).

INFORMATION FOR CANDIDATES

- Your quality of written communication is assessed in questions marked with a pencil ()
- A list of physics equations is printed on pages 4 and 5.
- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is 60.

TWENTY FIRST CENTURY SCIENCE EQUATIONS

USEFUL RELATIONSHIPS

THE EARTH IN THE UNIVERSE

$$\text{distance} = \text{wave speed} \times \text{time}$$

$$\text{wave speed} = \text{frequency} \times \text{wavelength}$$

SUSTAINABLE ENERGY

$$\text{energy transferred} = \text{power} \times \text{time}$$

$$\text{power} = \text{voltage} \times \text{current}$$

$$\text{efficiency} = \frac{\text{energy usefully transferred}}{\text{total energy supplied}} \times 100\%$$

EXPLAINING MOTION

$$\text{speed} = \frac{\text{distance travelled}}{\text{time taken}}$$

$$\text{acceleration} = \frac{\text{change in velocity}}{\text{time taken}}$$

$$\text{momentum} = \text{mass} \times \text{velocity}$$

$$\text{change of momentum} = \text{resultant force} \times \text{time for which it acts}$$

$$\text{work done by a force} = \text{force} \times \text{distance moved in the direction of the force}$$

$$\text{amount of energy transferred} = \text{work done}$$

$$\text{change in gravitational potential energy} = \text{weight} \times \text{vertical height difference}$$

$$\text{kinetic energy} = \frac{1}{2} \times \text{mass} \times [\text{velocity}]^2$$

ELECTRIC CIRCUITS

$$\text{power} = \text{voltage} \times \text{current}$$

$$\text{resistance} = \frac{\text{voltage}}{\text{current}}$$

$$\frac{\text{voltage across primary coil}}{\text{voltage across secondary coil}} = \frac{\text{number of turns in primary coil}}{\text{number of turns in secondary coil}}$$

RADIOACTIVE MATERIALS

$$\text{energy} = \text{mass} \times [\text{speed of light in a vacuum}]^2$$

Answer ALL the questions.

- 1 (a) An astronomer measures the distance to an object in space as about **100** light-years.**

The distance from the Sun to the nearest neighbouring star is about **4 light-years.**

Which statement best describes the position of the object?

Put a tick (✓) in the box next to the correct statement.

as far as very distant galaxies

outside the Milky Way, but not as far as nearby galaxies

outside the solar system but inside the Milky Way galaxy

outside the solar system but closer than the nearest stars

inside the solar system

[1]

(b) Observations of the light from different galaxies show that galaxies are moving away from each other.

This suggests that the Universe is expanding.

Describe these observations and explain how they are consistent with the idea of an expanding Universe.

[4]

- (c) The big bang is one explanation for why the Universe is expanding.**

Another explanation is that new galaxies form in the spaces in between existing galaxies, pushing them further apart.

- (i) Both explanations are based on the same observation.**

How is it possible for scientists to reach different conclusions that account for the same data?

[1]

- (ii) We now accept the big bang theory as the explanation of why the Universe is expanding.**

How do scientists decide between different theories?

[2]

[Total: 8]

BLANK PAGE

2 This question is about earthquakes and the structure of the Earth.

An earthquake occurs at **X**.

The diagram shows places where S-waves and P-waves from the earthquake are detected.

3 This question is about the properties of waves.

Bobby has kicked his ball into the middle of a pond.

The ball is 10 m from the edge of the pond.

He tries to move the ball by making waves on the water with a stick.

(a) Bobby hits the edge of the pond with the stick. He makes 6 complete waves in 12 seconds.

He counts exactly 4 complete waves between his stick and the ball.

The waves are all equal.

(i) What is the frequency of Bobby's wave?

Show your working.

frequency = _____ hertz [2]

(ii) What is the wavelength of Bobby's wave?

Show your working.

wavelength = _____ m [2]

(b) (i) Calculate the speed of the wave.

Show your working.

speed = _____ m/s [2]

(ii) Bobby thinks his ball will be carried by the waves to the shore.

Is Bobby right?

Explain your answer.

[2]

BLANK PAGE

5 Venus has a much higher average surface temperature than the Earth.

Venus has an average surface temperature of approximately **480 °C**.

The Earth has an average surface temperature of approximately **15 °C**.

(a) One factor that makes Venus so much hotter than the Earth is its atmosphere.

GAS IN ATMOSPHERE	EARTH	VENUS
nitrogen	78%	3.5%
oxygen	21%	less than 0.05%
carbon dioxide	less than 0.05%	96%
neon	less than 0.002%	less than 0.002%

(i) Use the data in the table to suggest why Venus is much hotter than the Earth.

[3]

(ii) Scientists suggest other conclusions about Venus from the data in the table.

They conclude that

- there are no green plants on Venus
- Venus has no ozone layer. Ozone is O₃.

Use straight lines to join each CONCLUSION to each piece of EVIDENCE that supports it.

CONCLUSION

EVIDENCE

no green plants

nitrogen **3.5%**

oxygen less than **0.05%**

carbon dioxide **96%**

no ozone layer

neon less than **0.002%**

[2]

- (b) (i) A second reason for the high temperature on Venus is that more energy from the Sun reaches Venus than the Earth.

Why is this?

Put a tick (✓) in the box next to the correct answer.

The photons have more energy when they get to Venus.

More photons hit Venus than Earth.

A day on Venus is about **240** times as long as on Earth.

The Earth takes longer to orbit the Sun than Venus.

[1]

- (ii) The intensity of electromagnetic radiation from the Sun decreases with distance.

Complete the sentences explaining this.

Use words from this list.

area

decreases

distance

energy

frequency

increases

intensity

stays the same

As electromagnetic radiation travels out from the Sun, it spreads out as the surface of a sphere.

The area of the sphere _____

with _____ ,

but the total _____ stays the same.

Therefore the amount of energy for each

square metre _____ .

[4]

- (iii) Experiments show that intensity is inversely proportional to the square of the distance. This is called the inverse square law.

The distance from Venus to the Sun is about **0.7** of the distance from the Earth to the Sun.

How much more intense does this suggest that the radiation reaching Venus will be compared to the radiation reaching the Earth?

Put a **ring** around the correct answer.

$(0.7)^2$

0.7

1

$\frac{1}{0.7}$

$\frac{1}{(0.7)^2}$

[1]

- (iv) The amount of energy reaching the planets from the Sun is actually less than expected by the inverse square law. Suggest a reason for this.

_____ [1]

[Total: 12]

BLANK PAGE

6 The Government is considering building new nuclear power stations. The power stations will produce a lot of electricity and will replace older nuclear power stations and some fossil fuel power stations. Nuclear waste will be transported to a central location for processing.

A Government inquiry is asking for groups to provide advice on whether to build the power stations or not.

Identify groups who will want to contribute to the inquiry, including groups for and against the building of the nuclear power stations. Explain the arguments they may make, including any key scientific issues.

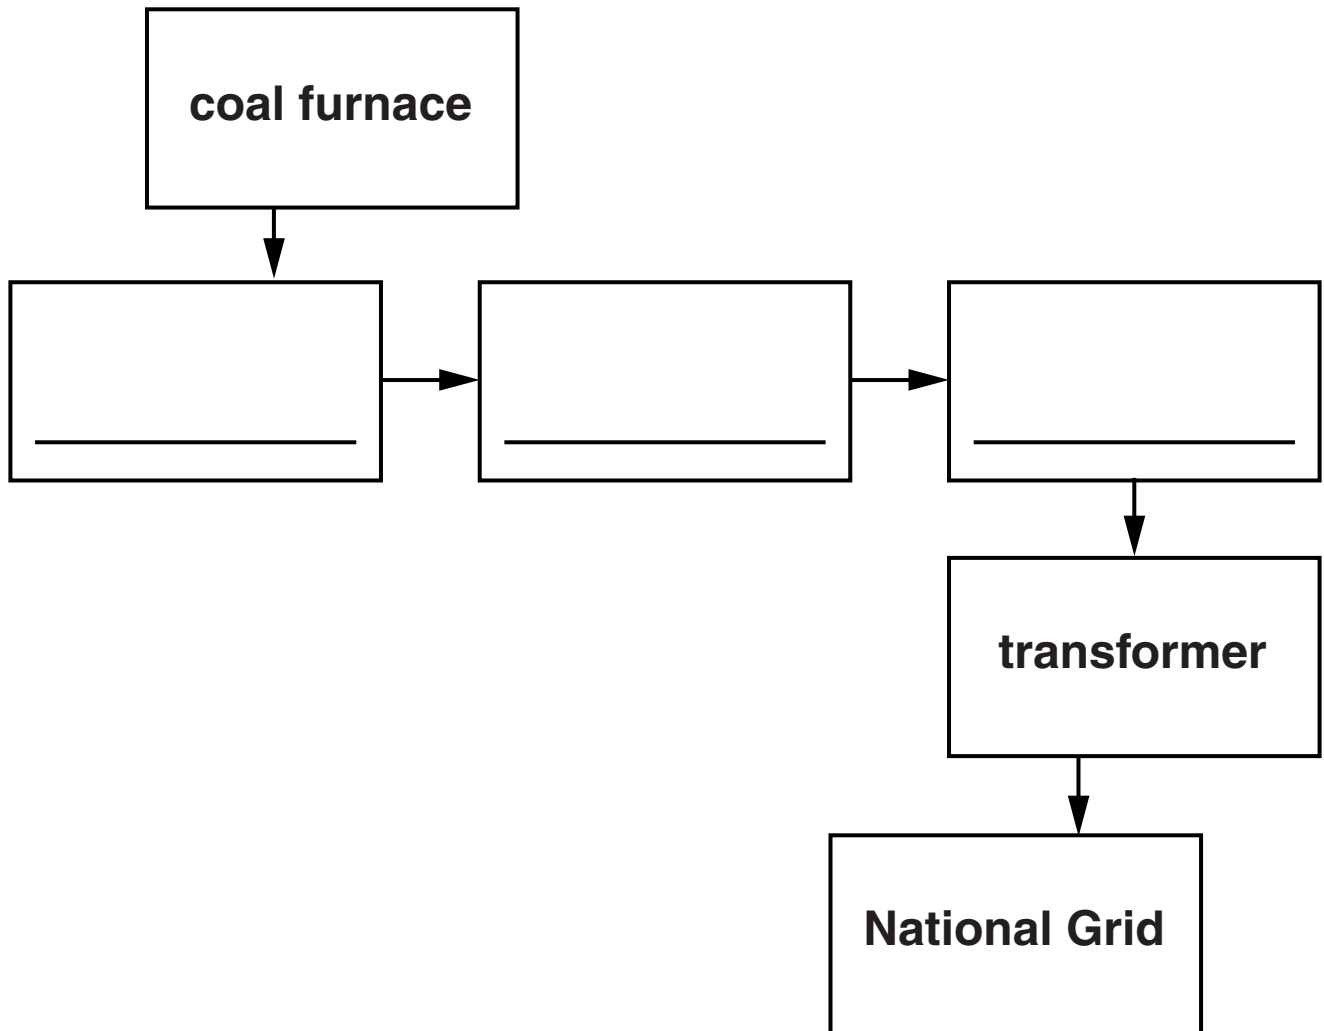

The quality of written communication will be assessed in your answer.

[6]

[Total: 6]

7 (a) Jenny has drawn a block diagram of a coal-burning power station.

Complete the diagram with the names of the STRUCTURES that will produce the electricity.

[3]

(b) There are many different types of power station.

A – coal-burning power station

B – hydroelectric power station

C – nuclear power station

D – oil power station

E – wind power station

Look at the statements in the table below. Each statement applies to one or more types of power station.

Complete the table by writing down the LETTERS of the power station types that fit the statements.

Each row may contain ONE, TWO or MORE letters.

STATEMENT	TYPE(S) OF POWER STATION
uses a non-renewable energy source	
does NOT use a boiler to turn water into steam	
produces carbon dioxide when generating power	
generates a voltage by spinning a magnet near a coil	
irradiation is a hazard	

[7]

(c) Some of the electricity produced by power stations is used in our homes.

(i) A kettle is **90%** efficient.

To boil the water **420 kJ** is needed.

Calculate how much electrical energy is used by the kettle.

energy = _____ kJ [2]

(ii) Suggest reasons why the kettle is only **90%** efficient.

_____ [2]
