Mark Scheme

2010 examination – January series

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation meeting attended by all examiners and is the scheme which was used by them in this examination. The standardisation meeting ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for the standardisation meeting each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed at the meeting and legislated for. If, after this meeting, examiners encounter unusual answers which have not been discussed at the meeting they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available to download from the AQA Website: www.aqa.org.uk

However, registered centres for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to centres to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

MARK SCHEME

Information to Examiners

1. General

The mark scheme for each question shows:

- the marks available for each part of the question
- the total marks available for the question
- the typical answer or answers which are expected
- extra information to help the Examiner make his or her judgement and help to delineate what is acceptable or not worthy of credit or, in discursive answers, to give an overview of the area in which a mark or marks may be awarded.

The extra information is aligned to the appropriate answer in the left-hand part of the mark scheme and should only be applied to that item in the mark scheme.

At the beginning of a part of a question a reminder may be given, for example: where consequential marking needs to be considered in a calculation; or the answer may be on the diagram or at a different place on the script.

In general the right hand side of the mark scheme is there to provide those extra details which confuse the main part of the mark scheme yet may be helpful in ensuring that marking is straightforward and consistent.

2. Emboldening

- 2.1** In a list of acceptable answers where more than one mark is available 'any **two** from' is used, with the number of marks emboldened. Each of the following lines is a potential mark.
- 2.2** A bold **and** is used to indicate that both parts of the answer are required to award the mark.
- 2.3** Alternative answers acceptable for a mark are indicated by the use of **or**. (Different terms in the mark scheme are shown by a / ; eg allow smooth / free movement.)

3. Marking points

3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which candidates have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error/contradiction negates each correct response. So, if the number of error/contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution? (1 mark)

Candidate	Response	Marks awarded
1	4,8	0
2	green, 5	0
3	red*, 5	1
4	red*, 8	0

Example 2: Name two planets in the solar system. (2 marks)

Candidate	Response	Marks awarded
1	Pluto, Mars, Moon	1
2	Pluto, Sun, Mars, Moon	0

3.2 Use of chemical symbols / formulae

If a candidate writes a chemical symbol / formula instead of a required chemical name, full credit can be given if the symbol / formula is correct and if, in the context of the question, such action is appropriate.

3.3 Marking procedure for calculations

Full marks can be given for a correct numerical answer, as shown in the column 'answers', without any working shown.

However if the answer is incorrect, mark(s) can be gained by correct substitution / working and this is shown in the 'extra information' column;

3.4 Interpretation of 'it'

Answers using the word 'it' should be given credit only if it is clear that the 'it' refers to the correct subject.

3.5 Errors carried forward

Any error in the answers to a structured question should be penalised once only.

Papers should be constructed in such a way that the number of times errors can be carried forward are kept to a minimum. Allowances for errors carried forward are most likely to be restricted to calculation questions and should be shown by the abbreviation e.c.f. in the marking scheme.

3.6 Phonetic spelling

The phonetic spelling of correct scientific terminology should be credited **unless** there is a possible confusion with another technical term.

3.7 Brackets

(.....) are used to indicate information which is not essential for the mark to be awarded but is included to help the examiner identify the sense of the answer required.

CHY1H**Question 1**

question	answers	extra information	mark
1(a)(i)	(yes as it) has the lowest / least (%)	ignore no accept it is <u>only</u> 6.6(%) accept any correct comparisons	1
1(a)(ii)	(no as it) any one from: • is second lowest • is 'medium' • is (only) third highest • depends on which oil it is compared with	ignore yes ignore it is only 29.3% accept neither high or low accept not the highest accept any correct comparison accept it has more mono – unsaturated fat	1
1(b)	(test) add bromine / iodine (solution)	ignore bromide / iodide ignore colours	1
	(result) turns colourless / decolourises	ignore clear ignore changes colour	1
1(c)(i)	increase(s) / gets higher	ignore boiling point	1
1(c)(ii)	would increase the saturated (fat) or reduce the unsaturated (fat)	idea of increase is required idea of reduction is required	1
	saturated (fat) is not / less healthy or unsaturated (fat) is healthy	accept hydrogenated (fat) is not / less healthy accept bad for you or causes heart disease accept good for you eg it would not make it healthier = 0 marks it would not make it healthier because it is saturated(fat) = 2 marks	1
Total			7

CHY1H

Question 2

question	answers	extra information	mark
2(a)(i)	any one from: - contain metals / filaments / wires - contain other / toxic chemicals / materials - different type of glass	ignore contamination without explanation accept named metal(s) accept named chemical(s) / material(s) accept glass would not melt ignore thicker / thinner glass	1
2(a)(ii)	any one from: (glass bottles are) recycled - need to be more expensive glass or strong / thicker / different glass (to be reused) - damaged / weaker (with reuse) - need to be cleaned / transported - different sizes / shapes / colours - no refunds paid	accept made to be used only once accept glass bottles are made of readily available materials or thin / cheap glass accept need to be sorted	1
2(a)(iii)	any two from: - low / <u>less energy</u> / heat or lower temperature needed - low / <u>less fuel</u> burned - no (carbon dioxide) from carbonate(s)	allow converse arguments ignore <u>no energy</u> without explanation ignore <u>no fuel</u> without explanation accept <u>less fuel</u> for extraction / transportation of raw materials accept name(s) of this carbonate(s)	2
2(b)(i)	46		1

Question 2 continues on the next page...

CHY1H**Question 2 continued**

question	answers	extra information	mark
2(b)(ii)	any one from: • (more) imported (as wine bottles) • not much green glass made in the UK • not a high demand (for green glass)	accept come from / made in other countries or made elsewhere	1
2(b)(iii)	any two from: • more (clear) glass is produced (64%) than recycled (40%) • (clear) glass going to landfill • (more) raw materials needed / extracted / quarried • (more) heat / energy / fuel would be needed • (more) carbon dioxide produced	accept not enough (clear) glass is recycled allow 'thrown away' ignore they will run out accept high carbon footprint / carbon emissions or global warming	2
Total			8

CHY1H**Question 3**

question	answers	extra information	mark
3(a)	(thought to cause) global warming / green house (effect) / climate change	ignore other consequences of global warming do not accept acid rain / ozone layer / global dimming	1
3(b)	any three from: • replant trees / renewable / sustainable • carbon (dioxide) used by trees / photosynthesis • it is a (continuous / carbon) cycle or carbon (dioxide) goes back into the air • no new carbon (dioxide) is produced or no locked up carbon (dioxide) is released or the carbon (dioxide) was absorbed millions of years ago	ignore reusable accept trees absorb carbon (dioxide) as they grow ignore respiration accept burning wood is carbon neutral for the second and third bullet points: accept trees use carbon dioxide which is released when (trees / wood are / is) burnt for 2 marks	3
Total			4

CHY1H**Question 4**

question	answers	extra information	mark
4(a)	no / insufficient evidence / proof / explanation	accept there were other theories such as a land bridge / solid crust	1
4(b)	(continental / tectonic) plates move any one from: • (caused by) convection currents (in the mantle) • (driven by) heat (energy) released by radioactive processes / decay • sudden (movement) / vibrations		1 1
4(c)	any one from: • do not know / see / able to detect / measure what is happening <u>below the Earth's crust</u> • build up of pressure between plates is randomly released	ignore cannot measure movement of plates / unpredictable accept (movement) is random / no pattern	1
Total			4

CHY1H**Question 5**

question	answers	extra information	mark
5(a)(i)	sulfur dioxide	allow sulfur oxide	1
	(forms) acid rain	accept acidic lakes / seas ignore consequences do not accept global warming / global dimming / ozone layer	1
5(a)(ii)	electrolysis	allow phonetic spelling ignore electroplating	1
5(b)(i)	alloyed / mixed with other metals / elements / atoms / zinc / tin	allow combined / added ignore make it impure do not allow reacted / bonded / joined	1
5(b)(ii)	(in the pure copper) copper / metal / atoms / layers able to slide over each other	accept zinc / tin / other (atoms) prevent (copper) atoms / layers sliding over each other	1
	zinc / tin / other (atoms) change the structure / disrupt pattern / layers or zinc / tin (atoms) are a different size	ignore different shapes	1
Total			6

CHY1H

Question 6

question	answers	extra information	mark
6(a)	vaporise / evaporate different condensing points / temperatures	allow boil for vaporise	1
		accept condense at different levels	1
		ignore different size molecules or different densities	
		mention of cracking = max 1	
		allow boils at different temperatures and condenses for 2 marks	
		if no other marks awarded allow fractional distillation for 1 mark	
6(b)(i)	3 (C ₂ H ₄)	accept +C ₄ H ₈	1
6(b)(ii)	(decane / naphtha / hydrocarbon) vaporise / evaporate	allow crude oil allow boil for vaporise	1
	(passed over) a catalyst / alumina / porous pot	ignore other names of catalysts	1
6(c)	any two from: - alkanes / butane (molecules) do not have a (carbon carbon) double bond / are saturated / have (carbon carbon) single bonds - alkenes / ethene (molecules) have (carbon carbon) double bonds or are unsaturated - alkenes / ethene molecules are able to bond to other molecules	'they' must be clarified	2
6(d)	single bonds between carbon atoms	— C – C —	1
	the –CH ₃ group appears on each pair of carbons on the 'chain'	NB any double bonds = 0 marks	1
Total			9

CHY1H**Question 7**

question	answers	extra information	mark
7(a)	gas / carbon dioxide / CO ₂ (produced / released)	ignore how gas is formed	1
7(b)	any two from: • calcium oxide / CaO / quicklime (is the solid) • (calcium oxide) reacts with water or carbon dioxide • argon would not react	accept reacts to form calcium hydroxide / calcium carbonate	2

Question 7 continues on the next page

CHY1H

Question 7 continued

question	answers	extra information	mark
7(c)	for full marks: candidates should consider and explain four of the following points: 1 Wood / habitats – - screening / use of wood - damage to habitat 2 Town (proximity) - - noise / visual / dust pollution / damage / subsidence 3 Labour force- - proximity to site (travelling time / use of fuel / carbon footprint) 4 River - - pollution due to nearness 5 Transport (of materials) – (nearness to road / railway) 6 Quality of limestone – (best D – C – A – B worst) - amount of waste 7 Wind direction – - carries dust, noise, fumes etc towards town (only B & D are directly downwind of town)	for full marks candidates must have at least one advantage and one disadvantage allow only one advantage / disadvantage for each point but each point could be correctly explained as an advantage and a disadvantage for 2 marks ignore issues common to all sites eg scarring the landscape / area of natural beauty ignore comments about sites other than the one chosen unless a comparison is made ignore pollution unless explained	max 4
Total			7
