|          | (b) (i) B and D<br>(ii) the particles have the same atomic number but different mass numbers  | [1] [1] 6  |                        |               |             |                        |   |   |      |     |   |   |   |   |   |     |      |     |   |   |   |     |
| 4        | (a) cathode<br>(b) graphite/carbon<br>(c) high cost/idea of needing a lot of energy/anodes need to be replaced  | [1] [1] [1] 3  |                        |               |             |                        |   |   |      |     |   |   |   |   |   |     |      |     |   |   |   |     |

|       |  | AVAILABLE MARKS   |
|-------|--|-------------------|
| 5 (a) | Acid – sulphuric acid<br>base – copper oxide/copper hydroxide<br>product – water   | [1]<br>[1]<br>[1] |
|       | If copper carbonate is used as the base it gains the mark for base but must state water and carbon dioxide for one mark for the product.                                   |                   |
| (b)   | Carbon Dioxide   | [1]               |
| 6     | idea of Mg atom losing 2 electrons<br>idea of F atom gaining 1 electron<br>idea of 2 F atoms needed to allow Mg to lose 2 electrons<br>(third mark dependent on first two) | [1]<br>[1]<br>[1] |
| 7 (a) |  | 3                 |
|       | Correct sharing<br>Correct number of electrons (second mark dependent on first)  | [1]<br>[1]        |
| (b)   | Idea of sharing electrons/covalent bonding<br>Idea of correct 2:1 ratio  | [1]<br>[1]        |
| 8 (a) | It combines the properties of two or more materials<br>to form a better more useful material   | [1]<br>[1]        |
| (b)   | carbon fibre reinforced plastic is less dense/lighter than steel/aluminium<br>it will need less fuel or idea of greater efficiency   | [1]<br>[1]        |
| (c)   | Idea of (initial) cost.  | [1]               |
| 9     | $\text{H}^+_{(\text{aq})} + \text{OH}^-_{(\text{aq})} \longrightarrow \text{H}_2\text{O}_{(\text{l})}$   | 5                 |
|       | [1] for left hand side<br>[1] for right hand side<br>[1] for state symbols   | [3]               |

|    |  | AVAILABLE MARKS    |
|----|--|--------------------|
| 10 | $\frac{P_1V_1}{T_1} = \frac{P_2V_2}{T_2}$ $\frac{20 \times 100}{300} = \frac{22 \times 80}{T_2}$ $T_2 = \frac{22 \times 80 \times 300}{20 \times 100}$ $T_2 = 264 \text{ K}$               | [1] [1] [1] [1]    |
|    | For correct answer award [3]<br>up to [2] available for method   | 3                  |
| 11 | (a) it has a giant structure<br>The bonds between the atoms are very strong/Difficult to break<br><br>(b) graphite has a layer structure<br>this allows the atoms to slide over each other | [1] [1]<br>[1] [1] |
|    |  | 4                  |
| 12 | Hard water contains calcium ions<br>which are replaced by sodium ions/hydrogen ions<br>which do not cause hardness   | [1]<br>[1]<br>[1]  |
|    |  | 3                  |
| 13 | (a) hydrogen gas<br><br>(b) $2 \text{Cl}^- - 2\text{e}^- \longrightarrow \text{Cl}_2$ or $2\text{Cl}^- \longrightarrow \text{Cl}_2 + 2\text{e}^-$<br><br>(c) sodium hydroxide              | [1]<br>[2]<br>[1]  |
|    |  | 4                  |
|    | Total  | 50                 |
