Double Award Science: Chemistry

Unit C1

Foundation Tier

[GSD21]

TUESDAY 28 FEBRUARY 2012

11.00 am–12.00 noon

**MARK
SCHEME**

General Marking Instructions and Mark Grids

Introduction

Mark schemes are intended to ensure that the GCSE examination is marked consistently and fairly. The mark schemes provide markers with an indication of the nature and range of candidates' responses likely to be worthy of credit. They also set out the criteria that they should apply in allocating marks to candidates' responses. The mark schemes should be read in conjunction with these marking instructions.

Quality of candidates' responses

In marking the examination papers, examiners should be looking for a quality response reflecting the level of maturity which may reasonably be expected of a 16-year-old which is the age at which the majority of candidates sit their GCSE examinations.

Flexibility in marking

Mark schemes are not intended to be totally prescriptive. No mark scheme can cover all the responses which candidates may produce. In the event of unanticipated answers, examiners are expected to use their professional judgement to assess the validity of answers. If an answer is particularly problematic, then examiners should seek the guidance of the Supervising Examiner.

Positive marking

Examiners must be positive in their marking, giving appropriate credit for description, explanation and analysis, using knowledge and understanding and for the appropriate use of evidence and reasoned argument to express and evaluate personal responses, informed insights and differing viewpoints. Examiners should make use of the whole of the available mark range of any particular question and be prepared to award full marks for a response which is as good as might reasonably be expected of a 16-year-old GCSE candidate.

Awarding zero marks

Marks should only be awarded for valid responses and no marks should be awarded for an answer which is completely incorrect or inappropriate.

Types of mark scheme

Mark schemes for questions which require candidates to respond in extended written form are marked on the basis of levels of response which take account of the quality of written communication.

Other questions which require only short answers are marked on a point for point basis with marks awarded for each valid piece of information provided.

- 1 (a) Any **one** from:
idea of international recognition
idea of eye catching
idea of recognition without ability to read [1]

- (b) Flammable

Corrosive [3]

- (c) (i) Ethanol [1]

- (ii) Sulfuric acid [1]

6

2 (a)

Property	Solid	Liquid	Gas
Will melt when heated	✓		
Takes the shape of the container		✓	✓
Takes the volume and shape of the container			✓
Has a defined shape	✓		
Can be compressed			✓

[1] per correct tick [5]

- (b) (i) The temperature [1] at which a solid becomes a liquid [1] [2]

- (ii) solid A and D [2]
liquid C [1] [3]

- (c) X = freezing [1]
Y = sublimation [1]
Z = condensing [1] [3]

13

- 3 (a) (i) Any **two** of:
carbon/iron/tin [1]

- (ii) Mixture [1] idea that one component is a metal [1] [2]

- (b) Idea that white plastic is composed of two or more elements [1]
chemically combined [1] [2]

5

			AVAILABLE MARKS
4	proton	Has a relative mass of 1 and a charge of +1 [1]	
	mass number	Total number of protons and neutrons in an atom [1]	
	atomic number	The number of protons in an atom [1]	[3]
			3
5	(a) (i)	 <p>(Filter) funnel Filter paper Conical flask or other suitable container</p>	No labels allow maximum [2]/[3] for a recognisable diagram.
	(ii)	Correctly label the liquid in the container as filtrate	[3]
	(b)	Candidates tick the box beside "Universal Indicator"	[1]
	(c)	Soil B	[1]
			6
6	(a) (i)	Mg ²⁺	[1]
	(ii)	SO ₄ ²⁻ /NO ₃ ⁻	[1]
	(iii)	Na	[1]
	(iv)	NO ₃ ⁻	[1]
	(b)	Lithium oxide	[1]
	(c)	Correct direction of transfer of electrons [1] Correct number transferred from lithium [1] Correct number transferred to oxygen/idea of 2:1 ratio [1] Idea of covalency = [0]	[3]
	(d)	Any two from: <ul style="list-style-type: none"> • solid/white/solid white/crystalline [1] • high melting point (not high boiling point) [1] • soluble/dissolves (in water) [1] • does not conduct electricity (as a solid) [1] • will conduct electricity in liquid form [1] • brittle [1] 	[2]
			10

- 7 (a) Candidates tick the box beside "A substance which is able to dissolve another substance" [1]

(b)

Response	Mark
Candidates must use appropriate specialist terms throughout to describe fully the chemical identification of water in a logical sequence. They use good spelling, punctuation and grammar and the form and style are of a high standard.	([5]–[6])
Candidates use some appropriate specialist terms to describe the chemical identification of water in a logical sequence. They use satisfactory spelling, punctuation and grammar and the form and style are of a satisfactory standard.	([3]–[4])
Candidates make reference to 1–2 of the main points shown below using limited spelling, punctuation and grammar. The form and style is of limited standard and they have made no use of specialist terms.	([1]–[2])
Candidates make no reference to the main parts below and offer no other suitable response.	([0])

Use of anhydrous [1] copper sulfate [1]

White [1] to blue [1]

Practical idea of addition of the CuSO_4 to water/testing each sample individually [1]

Idea that this result indicates water [1]

Alternative to first 4 marking points:

Use of anhydrous [1] cobalt chloride [1]

Blue [1] to pink [1]

Accept for a maximum of [2]

Boiling point = $100\text{ }^\circ\text{C}$ [1]

Freezing point = $0\text{ }^\circ\text{C}$ [1]

						AVAILABLE MARKS
8	(a)	Elements	Atomic Number	Electronic configuration	Group Number	
		A	12	2,8,2	2 [1]	
		B	6	2,4 [1]	4	
		C	9 [1]	2,7	7	
		D	15	2,8,5 [1]	5	
					[4]	
	(b)	2 (electrons)				[1]
	(c)	Sulfur				[1]
	(d)	(i) The alkali metals (not alkaline)				[1]
		(ii) They react with water (vapour) in the air				[1]
	(e)	(i) Idea of shiny surface				[1]
		(ii) Idea that surface begins to tarnish				[1]
	(f)	Any two from: Use small pieces/use tongs to lift the alkali metal/use a safety screen				[2]
						12
9	(a)	Oxygen and carbon dioxide				[1]
	(b)	Idea that fish require (dissolved) oxygen for survival [1] As the temperature increases the dissolved oxygen (content of the water) decreases [1] Link decreasing oxygen content to death of fish/distress/showing signs of struggling [1]				[3]
	(c)	3 points correctly drawn [1] curve continued [1]				[2]
	(d)	(i) 42 g/100g water/read from candidate's graph				[1]
		(ii) Unsaturated				[1]
						8
						Total
						70
