General Certificate of Secondary Education 2015–2016

Science: Single Award

Unit 2 (Chemistry)

Higher Tier

GSS	221

THURSDAY 19 MAY 2016, MORNING

TIME

1 hour 15 minutes, plus your additional time allowance.

INSTRUCTIONS TO CANDIDATES

Write your Centre Number and Candidate Number in the spaces provided at the top of this page.

You must answer the questions in the spaces provided.

Do not write outside the boxed area on each page or on blank pages.

Complete in blue or black ink only.

Answer **all ten** questions.

INFORMATION FOR CANDIDATES

The total mark for this paper is 75.

Quality of written communication will be assessed in Questions 1 and 9.

Figures in brackets printed down the right-hand side of pages indicate the marks awarded to each question or part question.

A Data Leaflet, which includes a Periodic Table of the Elements, is included in this question paper.

1 Describe why and how earthquakes occur.

Your answer should include:

- an explanation of the process;
- the name of the scale used to measure earthquakes and what the readings tell us about earthquakes.

In this question you will be assessed on your written communication skills including the use of specialist scientific terms.

2 Below are some particle diagrams. They represent elements or compounds.

A	B C C C C C
C () () () () () () () () () () () () () (D D D D D D D D D D D D D D D D D D D

(a) Which of the diagram(s) (A, B, C or D) show elements? Explain your answer.Diagram(s) ______

(b) Suggest which diagram (A, B, C or D) could represent the compound carbon monoxide (CO).

[1]

3 (a) The table below gives information about five hydrocarbon molecules.

Molecule	Number of carbon atoms	Melting point/°C	Boiling point/°C	Energy released per gram when burned/kJ
methane	1	- 182	- 162	56
ethane	2	- 183	- 89	52
propane	3	- 188	- 42	51
butane	4	- 138	0	50
pentane	5	- 130	36	49

(i) Calculate the energy released when 100 grams of propane is burned.

₋kJ [1]

(ii) Calculate the difference between the melting points of the molecules with the most and least carbon atoms.

°C	[1]
 C	[IJ

(iii) Describe the relationship between the number of carbon atoms and a molecule's boiling point.

(b) Complete the word equation below for the burning of propane	(b)	Complete th	e word equation	below for the	burning of propane
---	-----	-------------	-----------------	---------------	--------------------

propane -	-	$] \rightarrow$	carbon dioxide	+	water [1]

4 The table below gives information about three different indicators and their colours at different pH values.

pH Indicator	1	2	3	4	5	6	7	8	9	10	11	12	13	14
methyl purple	Ρ	Ρ	Ρ	Ρ	G	G	G	G	G	G	G	G	G	G
thymol blue	Y	Y	Y	Y	Y	Y	Y	Y	В	В	В	В	В	В
indigo carmine	В	В	В	В	В	В	В	В	В	В	В	Y	Y	Y

Key:	B = blue	G = green	P = purple	Y = yellow
------	----------	-----------	------------	------------

Use the information in the table to answer the following questions.

(a) 1. What colour is methyl purple indicator in a strong acid?

- 2. What colour is indigo carmine indicator in sodium hydroxide?
- (b) A scientist is going to add an acid to an alkali. He needs to stop adding the acid when the pH value is 7.
 - (i) What name is given to this type of reaction?

_ [1]

[2]

(ii) Explain fully why the scientist would **not** find any of the indicators in the table useful for his experiment.

____ [2]

(c)	Most indicators are made from plants. Describe how you would obtain an indicator from red cabbage.	
		_ [3]

o (a)	6 (a) Aluminium is extracted from its ore by the process of electrolysis.		
	(i)	Define the term electrolysis.	
		[2]	
	(ii)	Complete the following sentences about the extraction of aluminium.	
		The chemical name for the ore of aluminium is aluminium	
		During electrolysis the aluminium ions move to the negative electrode which	
		is called the Here they gain	
		three to become aluminium atoms. [3]	
(d)	Anc (i)	other compound of aluminium is aluminium hydroxide; its formula is Al(OH) ₃ . Name the three elements present in aluminium hydroxide.	
(d)			
(D)	(i)	Name the three elements present in aluminium hydroxide.	
(D)	(i)	Name the three elements present in aluminium hydroxide.	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?	
(D)	(i)	Name the three elements present in aluminium hydroxide [1] How many atoms in total are represented by the formula Al(OH) ₃ ?

(d) (i)	Complete the diagrams below to show the electronic structures of sodium
	and chlorine. You may find your Data Leaflet helpful.

(ii) Give **one** similarity and **one** difference between the electronic structures of sodium and chlorine.

	Similarity	
	Difference	
(iii)	Describe, in terms of electrons, how sodium and chlorine form the compound sodium chloride.	[2]
		[3]
(iv)	Write the balanced symbol equation for the reaction between sodium and chlorine.	[3]
	[Turi	ເວງ າ ovei

8 (a) What is meant by the term hard water?		
	[1]	
(b) Hard	water can be described as either temporary or permanent.	
	emporary hard water can be softened by boiling. Complete the balanced symbol equation below for this reaction.	
Ca(HCO ₃) ₂		
	[2]	
	Jsing the diagram above explain how washing soda removes hardness rom water.	
	[3]	

(c) A scientist conducted an investigation into the hardness of different samples of water. He put 25 cm³ of four different samples (W, X, Y, Z) into separate flasks. He added soap solution to each flask and shook it until a lather was formed. He repeated the experiment with boiled samples. The results are shown below.

Sample	Height of lather before boiling/mm	Height of lather after boiling/mm
W	8	8
Х	24	23
Y	20	23
Z	6	21

(i) Complete the bar chart below.

- **9** Smart materials are used in many everyday objects such as sunglasses, forehead thermometers and baby feeding spoons.

Define the following three terms:

smart material, thermochromic and photochromic.

Suggest how thermochromic and/or photochromic materials are useful in any two of the objects named above.

In this question you will be assessed on your written communication skills including the use of specialist scientific terms.
