

**GENERAL CERTIFICATE OF SECONDARY EDUCATION
TWENTY FIRST CENTURY SCIENCE
SCIENCE A**

Unit 4: Ideas in Context (Higher Tier)

A214/02

Candidates answer on the question paper.
A calculator may be used for this paper.

OCR supplied materials:

- Insert (inserted)

Other materials required:

- Pencil
- Ruler (cm/mm)

**Friday 27 May 2011
Morning****Duration: 45 minutes**

Candidate forename		Candidate surname	
--------------------	--	-------------------	--

Centre number						Candidate number				
---------------	--	--	--	--	--	------------------	--	--	--	--

INSTRUCTIONS TO CANDIDATES

- The insert will be found in the centre of this document.
- Write your name, centre number and candidate number in the boxes above. Please write clearly and in capital letters.
- Use black ink. Pencil may be used for graphs and diagrams only.
- Read each question carefully. Make sure you know what you have to do before starting your answer.
- Write your answer to each question in the space provided. Additional paper may be used if necessary but you must clearly show your candidate number, centre number and question number(s).
- Answer **all** the questions.
- Do **not** write in the bar codes.

INFORMATION FOR CANDIDATES

- The number of marks is given in brackets [] at the end of each question or part question.
- The total number of marks for this paper is **40**.
-  Where you see this icon you will be awarded a mark for the quality of written communication in your answer.
- This document consists of **8** pages. Any blank pages are indicated.

Answer **all** the questions.

1 This question is based on the article ‘Are organic foods better for us?’.

- (a) The article describes a study carried out for the Food Standards Agency (FSA).

- (i) In 2009 the FSA made a study of the nutritional value of organically grown food.

What was the conclusion of this study?

.....
.....

[1]

- (ii) There is more phosphorus in organic food. Phosphorus is a mineral needed in the diet.

How does the FSA explain that this extra phosphorus does not make organic food more nutritious?

.....
.....

[1]

- (b) Farmers using intensive farming methods spray crops with pesticides to control insect pests.

- (i) The FSA says it is safe to eat food from crops sprayed with pesticides.

Give two reasons to explain why.

1

.....

2

.....

[2]

- (ii) Some people still prefer to buy organically grown vegetables because they are not sprayed with pesticides.

Use the **precautionary principle** to suggest why.

.....

.....

.....

[2]

- (c) People bought more organic food each year up to 2007, but sales fell in 2008 and 2009.

Suggest an explanation for this fall.

.....
.....
.....
.....

[2]

- (d) It has been suggested that all farmers in the UK should use organic methods.

Suggest why this may **not** be a practical idea.

.....
.....
.....
.....

[2]

- (e) Look at the table of results showing vitamin C content in tomatoes.

- (i) The best estimate for the vitamin C content of the intensively grown tomatoes is 19.9 mg/100 g.

Show how this best estimate is calculated.

.....

[2]

- (ii) The scientists concluded that there was not a real difference in the vitamin C content of tomatoes grown using the two farming methods.

Explain how the data shows that there is not a **real difference**.

.....

[1]

[Total: 13]

2 This question is based on the article ‘Methane from the Arctic’.

- (a) The article states that the carbon dioxide level changed from 280 ppm to 387 ppm.

This is an increase of 107 ppm, which is nearly 40%.

Calculate the actual percentage increase.

$$\text{percentage increase} = \dots \dots \dots \dots \dots \% \quad [2]$$

- (b) The article states that ‘... the consequences of continued global warming will be severe.’

Write down one consequence of continued global warming, and explain why it will have a severe effect.

consequence

why it will be severe

..... [2]

- (c) (i) Explain how carbon dioxide and methane cause global warming.

Your answer should refer to

- the effect of greenhouse gases on radiation
- the source of the radiation.

.....
.....
.....
..... [2]

- (ii) If global warming continues, the warmer atmosphere will hold more water vapour.

Predict the consequences of this.

.....
.....
.....
..... [2]

- (d) Professor Walter's work in Alaska has been replicated in northern Russia.

Suggest and explain a reason for replicating her experiments in another part of the Arctic.

.....
.....
.....

[2]

- (e) The article suggests that methane from the lakes can be collected and used as a fuel.

Discuss the advantages and disadvantages of using Arctic methane as a fuel.

One mark is for considering both sides of the argument.

.....
.....
.....
.....
.....
.....
.....
.....

[2+1]

- (f) Suggestions to keep the permafrost frozen involve reducing the snow cover.

Explain how reduced snow cover helps the permafrost to freeze harder in the winter.

.....
.....

[1]

[Total: 14]

3 This question is based on the article “‘Pump head’ syndrome”.

Heart-lung machines are regularly used when heart surgery is carried out.

- (a) The scientists involved in the study in **Part A**, thought there was a **correlation** between heart-lung machines and ‘pump head’ syndrome.

Suggest **two** possible causal links between being on a heart-lung machine and having reduced brain function.

.....
.....
.....
.....

[2]

- (b) At the end of **Part A**, the article states, ‘This was true even when the figures were adjusted for age.’

Why should the figures be adjusted for age?

.....
.....
.....

[1]

- (c) Some scientists think that the data in **Part A** is flawed.

Use the information from **Part B** to suggest two reasons why the data is flawed.

- 1
- 2

[2]

- (d) **Part C** describes the study carried out by Ola Selnes.

152 patients had surgery using a heart-lung machine.

In the previous study 42% of patients developed ‘pump head’ syndrome.

If this result was repeated in Professor Selnes’ study, how many of the 152 patients would develop ‘pump head’ syndrome?

Show your working.

answer = [2]

(e) Different control groups were used in Professor Selnes' study.

(i) Describe one control group and state the number of people involved.

..... [1]

(ii) Explain why this control group was needed.

..... [1]

(f) Double-blind trials were not appropriate for the study in **Part C**.

Explain why.

.....
.....
..... [2]

(g) In Ola Selnes' study in **Part C**, the number of people in each group was quite different.

Suggest why the group sizes were different.

..... [1]

(h) Some people will experience reduced brain function even though they do not have heart disease.

Suggest one reason why.

..... [1]
