

## **MARKSCHEME**

## **May 2009**

# MATHEMATICS SETS, RELATIONS AND GROUPS

## **Higher Level**

## Paper 3

Samples to Team Leaders	10 June 2009
Everything (marks, scripts etc.) to IB Cardiff	18 June 2009

This markscheme is **confidential** and for the exclusive use of examiners in this examination session.

It is the property of the International Baccalaureate and must **not** be reproduced or distributed to any other person without the authorization of IB Cardiff.

#### **Instructions to Examiners**

#### **Abbreviations**

- Marks awarded for attempting to use a correct **Method**; working must be seen.
- (M) Marks awarded for **Method**; may be implied by **correct** subsequent working.
- A Marks awarded for an **Answer** or for **Accuracy**; often dependent on preceding *M* marks.
- (A) Marks awarded for an **Answer** or for **Accuracy**; may be implied by **correct** subsequent working.
- **R** Marks awarded for clear **Reasoning**.
- N Marks awarded for **correct** answers if **no** working shown.
- **AG** Answer given in the question and so no marks are awarded.

#### Using the markscheme

#### 1 General

Write the marks in red on candidates' scripts, in the right hand margin.

- Show the **breakdown** of individual marks awarded using the abbreviations M1, A1, etc.
- Write down the total for each question (at the end of the question) and circle it.

### 2 Method and Answer/Accuracy marks

- Do **not** automatically award full marks for a correct answer; all working **must** be checked, and marks awarded according to the markscheme.
- It is not possible to award *M0* followed by *A1*, as *A* mark(s) depend on the preceding *M* mark(s), if any.
- Where *M* and *A* marks are noted on the same line, *e.g. M1A1*, this usually means *M1* for an **attempt** to use an appropriate method (*e.g.* substitution into a formula) and *A1* for using the **correct** values.
- Where the markscheme specifies (M2), N3, etc., do not split the marks.
- Once a correct answer to a question or part-question is seen, ignore further working.

#### 3 N marks

Award N marks for correct answers where there is no working.

- Do **not** award a mixture of *N* and other marks.
- There may be fewer N marks available than the total of M, A and R marks; this is deliberate as it penalizes candidates for not following the instruction to show their working.

#### 4 Implied marks

Implied marks appear in **brackets e.g.** (M1), and can only be awarded if **correct** work is seen or if implied in subsequent working.

- Normally the correct work is seen or implied in the next line.
- Marks **without** brackets can only be awarded for work that is **seen**.

### 5 Follow through marks

Follow through (FT) marks are awarded where an incorrect answer from one part of a question is used correctly in subsequent part(s). To award FT marks, there must be working present and not just a final answer based on an incorrect answer to a previous part.

- If the question becomes much simpler because of an error then use discretion to award fewer *FT* marks.
- If the error leads to an inappropriate value (e.g.  $\sin \theta = 1.5$ ), do not award the mark(s) for the final answer(s).
- Within a question part, once an error is made, no further **dependent** *A* marks can be awarded, but *M* marks may be awarded if appropriate.
- Exceptions to this rule will be explicitly noted on the markscheme.

#### 6 Mis-read

If a candidate incorrectly copies information from the question, this is a mis-read (MR). Apply a MR penalty of 1 mark to that question. Award the marks as usual and then write -1(MR) next to the total. Subtract 1 mark from the total for the question. A candidate should be penalized only once for a particular mis-read.

- If the question becomes much simpler because of the MR, then use discretion to award fewer marks
- If the MR leads to an inappropriate value (e.g.  $\sin \theta = 1.5$ ), do not award the mark(s) for the final answer(s).

#### 7 Discretionary marks (d)

An examiner uses discretion to award a mark on the rare occasions when the markscheme does not cover the work seen. The mark should be labelled (d) and a brief note written next to the mark explaining this decision.

#### 8 Alternative methods

Candidates will sometimes use methods other than those in the markscheme. Unless the question specifies a method, other correct methods should be marked in line with the markscheme. If in doubt, contact your team leader for advice.

- Alternative methods for complete questions are indicated by METHOD 1, METHOD 2, etc.
- Alternative solutions for part-questions are indicated by **EITHER...OR**.
- Where possible, alignment will also be used to assist examiners in identifying where these alternatives start and finish.

#### 9 Alternative forms

Unless the question specifies otherwise, accept equivalent forms.

- As this is an international examination, accept all alternative forms of **notation**.
- In the markscheme, equivalent **numerical** and **algebraic** forms will generally be written in brackets immediately following the answer.

-5-

• In the markscheme, **simplified** answers, (which candidates often do not write in examinations), will generally appear in brackets. Marks should be awarded for either the form preceding the bracket or the form in brackets (if it is seen).

**Example**: for differentiating  $f(x) = 2\sin(5x - 3)$ , the markscheme gives:

$$f'(x) = (2\cos(5x-3))5 = (-10\cos(5x-3))$$

Award AI for  $(2\cos(5x-3))$ 5, even if  $10\cos(5x-3)$  is not seen.

### 10 Accuracy of Answers

If the level of accuracy is specified in the question, a mark will be allocated for giving the answer to the required accuracy.

- **Rounding errors**: only applies to final answers not to intermediate steps.
- Level of accuracy: when this is not specified in the question the general rule applies: unless otherwise stated in the question all numerical answers must be given exactly or correct to three significant figures.

Candidates should be penalized **once only IN THE PAPER** for an accuracy error (AP). Award the marks as usual then write (AP) against the answer. On the **front** cover write -1(AP). Deduct 1 mark from the total for the paper, not the question.

- If a final correct answer is incorrectly rounded, apply the AP.
- If the level of accuracy is not specified in the question, apply the **AP** for correct answers not given to three significant figures.

If there is no working shown, and answers are given to the correct two significant figures, apply the **AP**. However, do **not** accept answers to one significant figure without working.

#### 11 Crossed out work

If a candidate has drawn a line through work on their examination script, or in some other way crossed out their work, do not award any marks for that work.

**1.** (a)

	1	-1	i	-i
1	1	-1	i	-i
-1	-1	1	-i	i
i	i	-i	-1	1
-i	−i	i	1	-1

-6-

AIsee the Cayley table, (since there are no new elements) the set is closed 1 is the identity element A11 and -1 are self inverses and i and -i form an inverse pair, hence every element has an inverse A1multiplication is associative A1hence  $\{1, -1, i, -i\}$  form a group G under the operation of multiplication AG[4 marks] (i) aba = aab=ebA1=bAGabab = aabb(ii) A1=ee

(c) (i)

=e

(b)

*	e	а	b	ab
e	e	а	b	ab
а	а	e	ab	b
b	b	ab	e	а
ah	ah	h	а	ρ

A2

AG

[2 marks]

**Note:** Award AI for 1 or 2 errors, A0 for more than 2.

(ii) see the Cayley table, (since there are no new elements) the set is closed A1 H has an identity element e A1 all elements are self inverses, hence every element has an inverse the operation is associative as stated in the question hence  $\{e, a, b, ab\}$  forms a group G under the operation \* AG

(iii) since there is symmetry across the leading diagonal of the group table, the group is Abelian A1

[6 marks]

continued ...

### Question 1 continued

2.

(d)	consider the element i from the group $G$ $i^{2} = -1$ $i^{3} = -i$			
	i <sup>4</sup> = 1 thus i -i is for th	AI AI RI	[4 marks]	
(e)	since	one group is cyclic and the other group is not, they are not isomorphic	R1	[1 mark]
			Total	[17 marks]
(a)	(i)	if * is commutative $a*b=b*a$ since $a+b+1=b+a+1$ , * is commutative	<i>R1</i>	
	(ii)	let $e$ be the identity element $a*e = a + e + 1 = a$ $\Rightarrow e = -1$	M1 A1	
	(iii)	let $a$ have an inverse, $a^{-1}$ $a*a^{-1} = a + a^{-1} + 1 = -1$ $\Rightarrow a^{-1} = -2 - a$	M1 A1	[5 marks]
(b)	$(x_1, \dots)$	$y_1) \odot ((x_2, y_2) \odot (x_3, y_3)) = (x_1, y_1) \odot (x_2 + x_3 + 1, 3y_2 y_3)$ $= (x_1 + x_2 + x_3 + 2, 9y_1 y_2 y_3)$	MI AIAI	

 $((x_1, y_1) \odot (x_2, y_2)) \odot (x_3, y_3) = (x_1 + x_2 + 1, 3y_1y_2) \odot (x_3, y_3)$  **M1** 

 $=(x_1+x_2+x_3+2,9y_1y_2y_3)$  A1

hence ⊙ is associative *R1* 

[6 marks]

Total [11 marks]

3. (a) consider (x, y)R(x, y)since x - x = 0 and y - y = 0, R is reflexive

A1

assume (x, y)R(a, b)

assume (x, y)R(a, b) $\Rightarrow x - a = 3M \text{ and } y - b = 2N$   $\Rightarrow a - x = -3M \text{ and } b - y = -2N$   $\Rightarrow (a, b)R(x, y)$ A1

hence R is symmetric

hence R is transitive

assume (x, y)R(a, b)  $\Rightarrow x-a=3M$  and y-b=2N M1assume (a, b)R(c, d)  $\Rightarrow a-c=3P$  and b-d=2Q M1  $\Rightarrow x-c=3(M+P)$  and y-d=2(N+Q) A1hence (x, y)R(c, d) A1

therefore R is an equivalence relation AG

[7 marks]

(b)  $\{(x, y): x = 3m + 2, y = 2n + 1, m, n \in \mathbb{Z}\}\$ 

[2 marks]

(c)  $\{3m, 2n\}$   $\{3m+1, 2n\}$   $\{3m+2, 2n\}$   $\{3m, 2n+1\}$   $\{3m+1, 2n+1\}$   $m, n \in \mathbb{Z}$  **A1A1A1A1A** 

[5 marks]

Total [14 marks]

suppose 
$$f(x, y) = f(u, v)$$
 M1

$$(2x + y, x - y) = (2u + v, u - v)$$

$$2x + y = 2u + v \quad (i)$$

$$x - y = u - v \qquad (ii)$$

$$(i) + (ii) \Rightarrow 3x = 3u \Rightarrow x = u$$

$$(i) - 2(ii) \Rightarrow 3y = 3v \Rightarrow y = v$$
 A1

hence function is injective *R1* 

$$let 2x + y = s and x - y = t$$
 M1

$$\Rightarrow$$
 3 $x = s + t$ 

$$\Rightarrow x = \frac{s+t}{3}$$

also 
$$3y = s - 2t$$

$$\Rightarrow y = \frac{s - 2t}{3}$$

for any  $(s, t) \in \mathbb{R} \times \mathbb{R}$  there exists  $(x, y) \in \mathbb{R} \times \mathbb{R}$  and the function is surjective R1

[10 marks]

(b) the inverse is 
$$f^{-1}(x, y) = \left(\frac{x+y}{3}, \frac{x-2y}{3}\right)$$

[1 mark]

Total [11 marks]

5. we are trying to prove 
$$(A \setminus B) \setminus C \neq A \setminus (B \setminus C)$$
  $MI(A1)$ 

$$LHS = (A \cap B') \setminus C \tag{A1}$$

$$=(A\cap B')\cap C'$$

 $RHS = A \setminus (B \cap C')$ 

$$=A\cap (B\cap C')' \tag{A1}$$

$$=A\cap (B'\cup C)$$
 A1

as LHS does not contain any element of C and RHS does, LHS  $\neq$  RHS R1

hence set difference is not associative AG

**Note:** Accept answers which use a proof containing a counter example.

Total [7 marks]
