

## UNIVERSITY OF CAMBRIDGE INTERNATIONAL EXAMINATIONS International General Certificate of Secondary Education

CANDIDATE NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
COMBINED SO	CIENCE		0653/03
Paper 3 (Extend	ded)		May/June 2008
			1 hour 15 minutes
Candidates ans	wer on the Question Paper.		
No Additional M	laterials are required.		

## **READ THESE INSTRUCTIONS FIRST**

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs, tables or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

This document consists of 20 printed pages.

1	(a)	Giv	e the term that matches each of these definitions.		
		a gı	reen pigment, found in some plant cells, which absorbs light energy		
		an (	organelle, found in some plant cells, where photosynthesis occurs		
		a fu	ılly permeable layer surrounding a plant cell		
		a pa	artially permeable layer surrounding all cells		
			[2]		
	(b)	During photosynthesis, glucose is produced in the leaves of a plant. Some of the glucose is changed to a different sugar and transported to the roots, where it is converted into starch and stored.			
		(i)	The diagram represents a glucose molecule. Complete the diagram to show part of a starch molecule.		
			[1]		
		(ii)	If the outer parts of a plant stem are damaged, this can prevent sugars being transported to the roots.		
			Explain why this happens, and why it can kill the plant.		
			[2]		

(c) Fig. 1.1 shows one of the ways in which a plant called *Bryophyllum* reproduces. It grows new plantlets from its leaves.

Fig. 1.1

	(i)	Name the t	ype of r	eproducti	on tl	nat is ta	aking pla	ce.			
											[1]
	(ii)	Explain who			this	way, r	ather tha	n by pr	oducin	g seeds, might b	e an

(a)	A student wrote down some properties of alpha, beta and gamma rad	iations.	
	Draw a line from each property to the correct radiation.		
	contains negatively charged particles		
		alpha	
	passes through several centimetres of lead		
	has no mass	beta	
	is deflected towards a negatively charged plate	Dota	
	is not affected by an electric field	Gamma	
	is the most ionising in air	gamma	
			[3]
(b)	Cobalt-60 is a radioactive isotope of cobalt.		
	Explain what is meant by the word <i>isotope</i> .		
			[2]
	······		[4]
(c)	Gamma radiation can be used to sterilise surgical instruments. gamma radiation makes it suitable for this purpose?	What property	of
			[1]
. n			
(d)	A scientist investigated the activity of a radioactive isotope. She mean of 8000 per second.	sured a count ra	ate
	20 minutes later the count rate was 2000 per second.		
	(i) Calculate the half-life of the isotope.		
			[1]

	(ii)	Predict how long after the start of the experiment the scientist could expect to measure a count rate of 250 per second.	For Examiner's Use
		Show your working.	
		[2]	
(e)	rad	an experiment, a radiation detector was set up and used to measure background iation. The background radiation in the laboratory was found to be 40 counts per nute.	
	(i)	What is background radiation?	
		[1]	
	(ii)	A radioactive source was placed near the detector and a reading of 1200 counts per minute was recorded. What was the count rate of the radioactive source?	
		counts per minute [1]	

3 Kerosene is a mixture of hydrocarbons used as a fuel for aircraft and for lighting and cooking.

For Examiner's Use

Kerosene is obtained from petroleum (crude oil) and is a liquid which boils in the range  $150\,^{\circ}\text{C} - 200\,^{\circ}\text{C}$ .

(a) (i) Name **one** other type of liquid fuel which is obtained from petroleum.

[1

(ii) State the important difference between the various compounds in petroleum which enables them to be separated by fractional distillation.

[1]

(b) A typical molecule in kerosene has the formula C<sub>13</sub>H<sub>28</sub>.

Complete the balanced equation below for the complete combustion of C<sub>13</sub>H<sub>28</sub>.

$$C_{13}H_{28} + \dots \rightarrow 13CO_2 + 14H_2O$$

[2]

(c) Fig. 3.1 shows a dot-and-cross diagram of a molecule of carbon dioxide.

Fig. 3.1

Describe in detail what is shown by the shaded area, **A**.

[2]

**4** Fig. 4.1 shows the quantity of nitrogen oxides and sulphur dioxide that was emitted to the atmosphere by a large industrial company between 2001 and 2005.

For Examiner's Use

Fig. 4.1

(a)	Describe the change in emissions of nitrogen oxides between 2001 and 2005.
	rol
	[2]
(b)	Suggest <b>two</b> ways in which the changes in sulphur dioxide emissions may have been brought about.
	[2]
(c)	Explain why reducing the quantities of nitrogen oxides and sulphur dioxide that are emitted to the air would be beneficial to the environment.
	[3]

**5** A man is playing golf.

For Examiner's Use

(a) As the golfer moves around the course in a golf cart, his movement is measured. The measurements are plotted on the graph in Fig. 5.1.

Fig. 5.1

Describe what is happening between

A – B	
B – C	
	[2]

(b) Calculate the total distance covered.

Show your working.

[3]

**6** Fig. 6.1 shows apparatus which can be used to reduce copper oxide to copper.

For Examiner's Use

[2]

Copper oxide is a black powder and during the reaction metallic copper forms inside the reaction tube.

Fig. 6.1

(a) (i) Select from the list of substances below to complete the word equation for the reaction in Fig. 6.1.

		air	copper	copper ox	ide
		hydrogen	oxygen	water	
		+		+	
					[1]
	(ii)	Describe <b>one</b> piece of evidenthis reaction.	ice which woul	d show that copper ha	ad been formed in
					[1]
(b)	Cop	oper oxide is an ionic compour	nd.		
	(i)	Explain why an oxide ion hat electrically neutral.	as an electrica	l charge of −2 but ar	n oxygen atom is

For
Examiner's
Use

(ii) The formula of copper oxide is CuO.

State the number of electrons which each copper ion gains to become a copper atom during the reaction in Fig. 6.1.

Explain your answer.	
	•••••
	[2]

(c) Fig. 6.2 shows another method of producing copper from copper oxide.

Fig. 6.2

(i)	Write the name of the salt dissolved in solution <b>P</b> in Fig. 6.2.	Exa
	[1]	
(ii)	Explain why zinc is able to react with the salt in solution <b>P</b> .	
	[1]	
(iii)	Explain, in terms of the transfer of electrons, which substance is oxidised when zinc reacts in solution ${\bf P}$ .	
	[2]	

**7** Fig. 7.1 shows the structure of the human thorax.

For Examiner's Use

Fig. 7.1

- (a) Using label lines, label each of the following structures.
  - bronchus
  - pleural membrane
  - trachea

	-:  -	Γ/	$\overline{}$	
•	าเก		,	1
_	10	14	_	

(b) Gas exchange takes place in the alveoli. When a person smokes for a number of years, the walls of the alveoli start to break down. This is called emphysema.

(c) Oxygen is transported around the body in red blood cells. Fig. 7.2 is a diagram of a group of red blood cells.

Fig. 7.2

	them for their function.	pts
		[3]
(d)	Explain why body cells need a constant supply of oxygen.	
		[2]

14 8 (a) A car travels 2 kilometres, at a steady speed, in 100 seconds. The total force driving the car forward is 1000 N. (i) Calculate the work done by the total driving force over this distance. State the formula that you use and show your working. formula working [2] (ii) Calculate the useful power output of the engine during this time. State the formula that you use and show your working. formula working

[2]

For

Examiner's Use

**(b)** A policeman is using a radar gun to measure the speed of a car.

The radar gun emits microwaves which hit the moving car and bounce back to a receiver in the radar gun.

A computer in the radar gun calculates the speed of the car.

(i)	) What type of waves are microwaves?	
		[1]
(ii	i) The waves bounce off the car back towards the radar gun. Name this process.	
		[1]
(c) Th	he headlamps on the car are connected in parallel as shown in Fig. 8.1.	
	$\begin{array}{c c} 12V \\ & &$	
	Fig. 8.1	
Ea	ach headlamp has a resistance of 4 ohms.	
Ca	alculate the combined resistance of the two headlamps.	
St	tate the formula that you use and show your working.	
	formula	
	working	
		[3]

(d) Fig. 8.2 shows a spring. The spring is 10 cm long. A 50 g mass is hung on the spring and the length of the spring increases to 13 cm.

For Examiner's Use

Fig. 8.2

The 50 g mass is replaced by an object of unknown mass. The new length of the spring is 22 cm.

Calculate the value of the unknown mass.

Show your working.

[2]

**9** The Periodic Table shows all of the chemical elements arranged into groups and periods.

For Examiner's Use

Fig. 9.1 shows part of the Periodic Table. The letters in this table are **not** the normal chemical symbols of the elements.

	I	Ш						Ш	IV	٧	VI	VII	0
1											_		Α
2	F												Е
3	С							Н					
4	G				В							D	

Fig. 9.1

- (a) Complete the statements below using letters, chosen from A to H, which refer to elements in Fig. 9.1. Letters may be used once, more than once or not at all.
  - The three elements shown as letters \_\_\_\_\_, and \_\_\_\_ and \_\_\_\_ have the same number of electrons in the outer shells of their atoms.
  - The element shown as letter \_\_\_\_\_ is a very reactive non-metal. [2]
- **(b)** A student used the apparatus shown in Fig. 9.2 to investigate the decomposition of the compound hydrogen peroxide, H<sub>2</sub>O<sub>2</sub>.

The balanced equation for the decomposition of hydrogen peroxide is shown below.

$$2H_2O_2 \rightarrow 2H_2O + O_2$$

Fig. 9.2

The student measured the decrease in mass of the conical flask and its contents which occurred during the reaction.

For Examiner's Use

Table 9.1 shows the measurements the student made in a series of trials using different masses of manganese dioxide.

The initial concentration and volume of the hydrogen peroxide solution in each trial were the same.

Table 9.1

trial	mass of m	anganese de / g	time for reaction to	decrease in mass during trial / g		
uiai	start	end	finish / seconds			
1	0	0	too long to measure	0		
2	0.5	0.5	540	1.6		
3	1.0	1.0	270	1.6		
4	2.0	2.0	135	1.6		

(i)	Explain why the mass of the flask and contents decreased in trials 2 to 4.
	[1]
(ii)	
	[1]
iii)	Use the information in Table 9.1 to explain the role of manganese dioxide in this reaction.
	[3]

(	iv)	The rate of chemical reactions increases if the temperature increases.								
		Explain in terms of collisions between particles why this happens.								
			[2]							
		'								
(c)	Cal	culate the relative molecular mass $(M_{\rm r})$ of hydrogen peroxide.								
	Sho	ow your working.								
			[1]
