Paper 5 Practical Test

May/June 2010

1 hour 30 minutes

Candidates answer on the Question Paper.

Additional Materials:

As listed in Instructions to Supervisors.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO **NOT** WRITE IN ANY BARCODES.

Answer all questions.

Chemistry practical notes for this paper are printed on page 16.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use									
1									
2									
3									
Total									

This document consists of 11 printed pages and 5 blank pages.

1 This question is about variation in leaves.

For Examiner's Use

(a) You are provided with 20 leaves of the same species. Measure the length *I* of each leaf in millimetres as shown in Fig. 1.1a. If the lamina does not meet the petiole evenly on either side of the leaf use the longer measurement. See Fig. 1.1b.

Enter your measurements in Table 1.1.

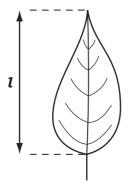

Fig. 1.1a

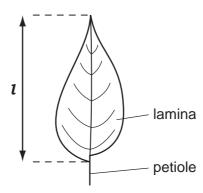

Fig. 1.1b

Table 1.1

	length of leaf <i>l /</i> mm
1	11
2	12
3	13
4	14
5	15
6	16
7	17
8	18
9	19
10	20

[2]

(b) Calculate the average (mean) length of the 20 leaves. Show your working.

average = _____ mm

[2]

(c)	The	difference betwee	en the greatest leng	th and the s	mallest length is the r	ange.
	Cor	nplete the following	g.			
	the	greatest length =			mm	
	the	smallest length =			mm	
	the	range =			mm	[1]
(d)		e the grid provided h square is 1 cm².	on page 5 to estim	nate the area	a of one of the leaves	. The area of
	•	Place the leaf on	the grid provided.			
	•	Carefully draw rou	und the leaf then re	move it.		
	•	Write the letter squares.	C in the complet	te squares.	Count the number	of complete
		nur	nber of complete (C	;) squares =		
	•	Write the letter P more.	in any incomplete	squares tha	t have an area of hal	f a square or
		numb	per of incomplete (F) squares =		
	•	Ignore the rest of	the squares.			
	•	Add C + P to estin	mate the area of the	e leaf.		
				leaf area =		cm ² [3]

© UCLES 2010 0653/52/M/J/10

(e)	The leaves in the sample were all of the same species yet they showed variation in
	lenath.

Suggest and	explain a rea	ason for thi	S.

	e going to find the specific heat capacity of the material of a can. The specific of a material is the heat energy required to raise 1g of the material by 1°C.	iic heat
(a) Find	d the mass of the can to the nearest gram.	
Rec	cord its mass below.	
	mass of can, m_1 , =g	[1]
` '	ce the lagging around the can. Place the thermometer inside the can and le minutes. Read the temperature, $\mathbf{t_1}$, to the nearest 0.5 °C and record it below.	
	temperature of can, t ₁ =°C	[1]
(c) (i)	Heat enough water in a beaker to about one-third fill the can. Whatemperature is just above 70 °C, remove the Bunsen. As soon as the temp of the water has cooled to exactly 70.0 °C pour the water into the can. Retemperature, $\mathbf{t_2}$, to the nearest 0.5 °C of the water after exactly two m . Record this temperature.	erature ead the
	temperature of water, t ₂ =°C	[1]
(ii)	Remove the lagging and pour the water into a measuring cylinder. Recovolume.	ord the
	volume of water =cm ³	[1]
(iii)	1 cm 3 of water has a mass of 1 g. Calculate the mass, $\mathbf{m_2}$, of the volume of you recorded in (c)(ii).	f water
	mass of water, m ₂ =g	[1]
(d) Cald	culate	
(i)	$\mathbf{t_3}$, the fall in temperature of the hot water, $\mathbf{t_3}$ = (70.0 - $\mathbf{t_2}$).	
(ii)	$t_3 = \underline{\hspace{1cm}}^{\circ} C$ t_4 , the rise in temperature of the can, t_4 = $(t_2$ - $t_1)$.	
	t ₄ =°C	[2]

(e) Use the equation to calculate the specific heat capacity, **shc**, of the material of the can.

For Examiner's Use

$$\text{shc} \quad = \quad \frac{m_2 \quad \text{x} \quad t_3 \quad \text{x} \quad 4.2}{t_4 \quad \text{x} \quad m_1}$$

specific heat capacity of the material of the can =
$$Jg^{-1} \circ C^{-1}$$
 [3]

3 You are going to investigate the rate of reaction between magnesium and hydrochloric acid.

Read through the procedure before starting the experiment.

- (a) (i) Set up the apparatus as shown in Fig. 3.1.
 - Fill the 100 cm³ measuring cylinder and trough with water.

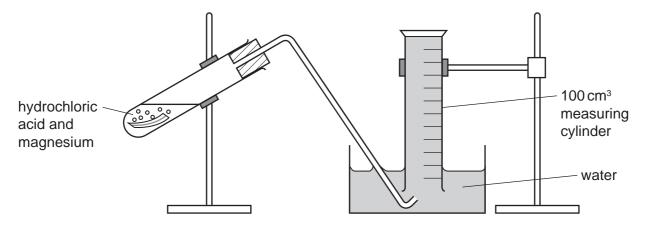

Fig. 3.1

- (ii) Place 20 cm³ of the hydrochloric acid in the large test-tube.
 - Cut 6 cm of magnesium ribbon from the length provided.
 - Loosely fold the piece of magnesium ribbon and place it in the acid contained in the test-tube. Immediately replace the stopper and delivery tube and start the timer.
 - Read the volume of gas in the measuring cylinder after 20, 40, 60 and 80 seconds.
 - Record the volumes in Table 3.1. [2]
- **(b) (i)** You will now repeat the procedure using the same length of magnesium but different volumes of acid and water.
 - Wash out the contents of the test-tube.
 - Refill the measuring cylinder with water.
 - Place 16 cm³ of hydrochloric acid in the test-tube and 4 cm³ of water.
 - Cut 6 cm of magnesium ribbon and place it in the acid. Replace the stopper and delivery tube.
 - Immediately start the timer.
 - Read the volume of gas in the measuring cylinder after 20, 40, 60 and 80 seconds.
 - Record the volumes in Table 3.1.

(ii) Repeat the experiment **two** more times using volumes of acid and water as shown in Table 3.1. Record the results in Table 3.1. [2]

For Examiner's Use

Table 3.1

volume of 2 mol/dm³	volume of water/cm ³	concentration of acid in the	volume of gas collected / cm ³ after								
hydrochloric acid/cm ³		mixture/mol/ dm ³	20 s	40 s	60 s	80 s					
20	0	2.0									
16	4	1.6									
12	8	1.2									
4	16	0.4									

(c) Draw a graph of volume of gas collected **after 40 s** (vertical axes) against concentration of hydrochloric acid. Include the origin in your plots and draw a smooth curve.

CHEMISTRY PRACTICAL NOTES

Test for anions

anion	test	test result
carbonate (CO ₃ ²⁻)	add dilute acid	effervescence, carbon dioxide produced
chloride (C <i>l</i> ·) [in solution]	acidify with dilute nitric acid, then add aqueous silver nitrate	white ppt.
nitrate (NO ₃ ⁻) [in solution]	add aqueous sodium hydroxide then aluminium foil; warm carefully	ammonia produced
sulfate (SO ₄ ²⁻) [in solution]	acidify then add aqueous barium chloride <i>or</i> aqueous barium nitrate	white ppt.

Test for aqueous cations

cation	effect of aqueous sodium hydroxide	effect of aqueous ammonia
ammonium (NH ₄ ⁺)	ammonia produced on warming	-
copper(II) (Cu ²⁺)	light blue ppt., insoluble in excess	light blue ppt., soluble in excess giving a dark blue solution
iron(II) (Fe ²⁺)	green ppt., insoluble in excess	green ppt., insoluble in excess
iron(III) (Fe ³⁺)	red-brown ppt., insoluble in excess	red-brown ppt., insoluble in excess
zinc (Zn ²⁺)	white ppt., soluble in excess giving a colourless solution	white ppt., soluble in excess giving a colourless solution

Test for gases

gas	test and test results
ammonia (NH ₃)	turns damp red litmus paper blue
carbon dioxide (CO ₂)	turns limewater milky
chlorine (Cl ₂)	bleaches damp litmus paper
hydrogen (H ₂)	"pops" with a lighted splint
oxygen (O ₂)	relights a glowing splint
