

Mark Scheme (Results)

Summer 2019

Pearson Edexcel International GCSE In Computer Science (4CP0) Paper 02: Application of Computational Thinking

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can get in touch with us using the details on our contact us page at <u>www.edexcel.com/contactus</u>.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: <u>www.pearson.com/uk</u>

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

This mark scheme is presented so that questions requiring a handwritten response are grouped at the start. This is followed by the mark scheme for the questions which require submission of coding. Examples of coding that would gain marks is grouped at the end in order of coding language.

Question	Answer	Additional Guidance	Mark
1(a)	The only correct answer is C		
	A is not correct because Boolean only has values True and False B is not correct because it only allows for one character D is not correct because it is used for mixed text and numeric data		
			(1)
1(b)	(an error that) produces incorrect /unintended output (1)	Accept an example of an explained logic error	(1)
1(d)	Any one from:		
	1. explain how the program works (1)		
	2. improve readability of the program (1)		
	3. make code more understandable (1)		(1)
1(e)	1. Global variables created in the main program / can be		
	accessed from any part of the program / are in scope		
	throughout the program (1)		
	2. Local variables are declared/created inside a		
	function/blocked code (indented, brackets) and are only		
	accessible there / are only in scope within the function in		
	which they're declared (1)		(2)

Question	Answer		Additional Guidance	Mark
1(g)	For up to two tests Award 1 mark for an approp for an item of test data that			
	Validation test	Erroneous data	letters	
	Are the first two characters letters/upper case letters?	1234CCC	 Characters 3 & 4 are numeric Last three characters are letters / upper case letters 	
	Are the third- and fourth- characters numerical digits?	CCCCBBB		
	Are the last three characters letters/upper case letters?	CC12345		
				(4)

Question	Answer	Additional Guidance	Mark
2(b)(i)	24.0 (1)	Accept 24	(1)
2(b)(ii)	One of:		
	By the rules of precedence multiplication is done before addition. (1)		
	Without the brackets the addition would be done to the total of the multiplication. (1)		
	By the rules of the BODMAS/BIDMAS additions happen after multiplication. (1)		
	newSpeed and intialSpeed have to be added together before multiplying (by time). (1)		(1)

Question	Answer	Additional Guidance	Mark
2(b)(iii)	Real (1)	Accept double / float	
	Because real x integer = real (1)	Accept 'because it could be a number with decimal	
		places'	(2)
2(b)(iv)	27.375 (1)		(1)
Q2(c)(i)			
	C#: 16 or 20 (1)		
	Java: 16 or 21 (1)		
	Python: 8 or 10 (1)		(1)
Q2(c)(ii)			(1)
	C#: 29 or 31 (1)		
	Java: 24 or 26 (1)		
	Python: 14 or 15 (1)		
			(1)
Q2(c)(iii)	Any of:		
	1. Message (1)		
	2. startPos (Python) / pos (Java or C#) (1)		
	3. characters (1)		(1)
Q2(c)(iv)	newMessage (1)	Do not accept outMessage	(1)
Q2(c)(v)	Response starts with 'c' (1)	Marks can be awarded from Q2(c)(vi)	
	Response has six letters in sequence from 'educational' (1)		(2)
Q2(c)(vi)	1. Returns substring / crops a string (1)	Award two marks for:	
	2. Located between the two input values / with number of	It produces a substring of the message starting at	
	characters identified in the last parameter (characters)	position startPos with length characters	
	and starting at the second parameter (startPos) (1)	Award up to 2 marks for a correct interpretation of the	
		code (e.g 'obtain a newMessage' – is worth 1)	
		Accept a correct generic explanation of what a	
		subprogram does for 1 mark	(2)

Question	Answer	Additional Guidance	Mark
Q3(b)	More memory/storage required (1)		
	Because not sorted in place / not efficient / many steps /		
	division of data set / is recursive (1)		(2)

Question	Answer	Additional Guidance	Mark
4(a)	The only correct answer is D		
	A is not correct because Plaintext is the original unencrypted text		
	B is not correct because there is a consistency in the coding of the text		
	C is not correct because a shift encryption replaces letters with other letters a given distance from the original letter (as in a Caesar cipher)		1
4(b)	Award 3 marks for all rows correct Award 2 marks for 4 rows correct Award 1 mark for 2 rows correct G Q I X N U		(3)
Q4(c)	One mark for correct decision: Yes (1) Up to two marks for the correct justifications: Each/every letter has a symbol / is represented (1) The symbol is a single/unique representation (1)	Award marks independently	(3)

Question	Answer	Additional Guidance	Mark
1(c)	C#	Candidates are required to open the file Q01c in	(3)
	1. Semicolon at the end of line 9 [maxValue=5;] (1)	the code editor.	
	2. Consistent capitalisation of 'count' on lines 10, 11, 13 and 14 (1)	Amended code should be saved as	
	3. constantValue needs to be defined and given the value 7 /	Q01cFINISHED.	
	replaced by value 7 (1)	Line numbers may have been changed by	
	Java	corrections to code (e.g. insertion of	
	1. Semicolon at the end of line 8 [maxValue = 5;] (1)	constantValue definition)	
	2. Consistent capitalisation of 'count' on lines 7, 9, 11 and 12 (1)		
	 constantValue needs to be defined and given the value 7 / replaced by 7 (1) 		
	Python		
	1. Colon needed at end of line 7 [count, maxValue):] (1)		
	2. Consistent capitalisation of 'count' on line 3, 7, 8 and 9 (1)		
	3. constantValue needs to be defined and given the value 7 /		
	replaced by 7 (1)		

Question	Answer		Additional Guidance	Mark
1(f)	Award 1 mark for each correct pair Boolean operator for each condition	of relational operators and 1 mark for correct on.	Candidates are required to open the file Q01f in the code editor. Amended code should be saved as	
	Condition	Coding	Q01fFINISHED.	
	Shop income more than £5000	shopIncome > 5000; assistantSales >= 10 (1)	Do not penalise candidates who	
	or assistant sold at least 10 pairs	correct OR operator (1)	attempt more than the stated	
	Shop income at least £2000 and	shopIncome >= 2000; assistantSales >= 5 (1)	requirements.	
	assistant sold at least 5 pairs	correct AND operator (1)	Do not award Boolean operator	
	Accept >9, >1999 and >4 for respec	tive >= comparisons	mark for single or & as these are not correct.	(4)

Question	Answer	Additional Guidance	Mark
2(a)	Award 1 mark for each of:	Candidates are required to open the file Q02a in the	
	1. set counter to 1 and guess to 0 (1)	code editor.	
	2. set answer to random value between 1 and 10 (1)	Amended code should be saved as Q02aFINISHED.	
	3. request input of and accept an integer value for guess (1)	Logic of algorithm must be followed as set out.	
	4. create a while loop with a correct condition (1)	Alternatives must address each point.	
	5. increment the counter (1)	Do not penalise candidates who attempt more than	
	6. use if else selection to determine and display appropriate output message for incorrect guesses (1)	the stated requirements.	
	7. request input of and accept another integer value for a		
	guess inside the loop (1)		
	8. display correct guess and count of guesses (1)		
	9. compiling without syntax errors (1)		
	10. coding meets all requirements of question (1)		(10)

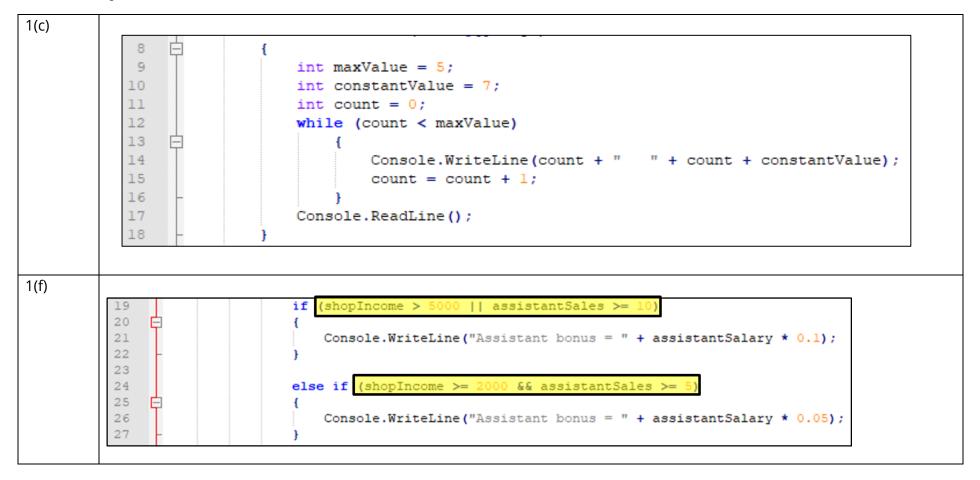

Question	Answer	Additional Guidance	Mark
Q3(a)	Award 1 mark each for:	Amended code should be saved as Q03aFINISHED.	
	1. File opened for input (1)	Do not penalise candidates who attempt more than	
	2. File opened for output (1)	the stated requirements.	
	3. Loop for processing data (1)		
	4. Check for '@' symbol (1)		
	5. Write invalid address to output file (1)		
	6. Close files (1)		(6)

Question	Answer	Additional Guidance	Mark
Q3(c)	Award 1 mark for each section of code that:	Amended code should be saved as Q03cFINISHED.	
	1. Asks for input of a number and stores it in a variable		
	with a meaningful name (1)	Allow follow through for mark point 4 when square and	
	2. Checks number is between 1 and 50 (1)	cube are incorrectly calculated.	
	3. Calculates square and cube of number (1)		
	4. Displays suitable labels e.g. 'Number', 'Square' and	Credit alternative coding which produces same results.	
	'Cube' and relevant values (1)		
	For the whole code:	Accept use of exponent operators:	
	5. Compiles and runs without logical or syntax errors (1)	C# e.g. Math.Pow (2, 3) = 8	
	6. Efficient in terms of computation, storage and selection	Java e.g. Math.pow (2, 3) = 8	
	of programming constructs (1)	Python e.g. 2**3 = 8.	
			(6)

Question	Designated marks:	Additional Guidance	Mark
Q5	Designated marks:	Award marks	
	 Initialise variables for at least two of total number of books, count of pupils and average Initialise variables for gold, silver and bronze / sort array in order of books read Create loop for identifying (and printing) those borrowing fewer than 10 books Print out appropriate details (must include pupil ID) Print out total of books borrowed Print out average number of books borrowed Identification of gold medal winner Identification of bronze medal winner Identification of bronze medal winner Details of at least one of gold, silver and bronze medal winner printed (minimum last name or first name) 	independently Award marks for reasonable attempt to meet requirement.	
	11. Details of all three medal winners (first name and last name)		(11)

Mark Band 0	Mark Band 1	Mark Band 2	Mark Band 3	Marks
0	1 – 3	4 - 6	7 – 9	
No rewardable content	Little attempt to decompose the problem into component parts	Some attempt to decompose the problem into component parts	The problem has been decomposed into component parts	
	Some parts of the logic are clear and appropriate to the problem	Most parts of the logic are clear and mostly appropriate to the problem	The logic is clear and appropriate to the problem	
	Some appropriate use and manipulation of data types, variables, data structures and program constructs	The use and manipulation of data types, variables and data structures and program constructs is mostly appropriate	The use and manipulation of data types, variables and data structures and program constructs is appropriate	
	Parts of the code are clear and readable	Code is mostly clear and readable	Code is clear and readable	
	Finished program will not be flexible enough with other data sets or input	Finished program will function with some but not all other data sets or input	Finished program could be used with other data sets or input	
	The program meets some of the given requirements	The program meets most of the given requirements	The program fully meets the given requirements	(9)
