COMPUTER S	STUDIES 0420/13	

Paper 1

October/November 2012 2 hours 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in. Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working. Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

No marks will be awarded for using brand names of software packages or hardware.

At the end of the examination, fasten all your work securely together. The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 20 printed pages.

For advertising at a trade fair, a company has a choice of computer facilities. One option is a stand-alone computer with multimedia facilities. The other option is a computer with 1 Examiner's Internet access to the company's website.

For

Use

Discuss the benefits and drawbacks of each method.

3 Five descriptions are given on the left of the diagram below. Five computer applications are shown on the right of the diagram.

Using arrows, link each description to the correct application.

use of synthesisers to combine simple waveforms to produce more complex sounds

audio-visual communication using compression and echo cancellation software

use of avatars in the sequence of images one after the other to produce special effects

audio compression technology to compress large files into smaller files often used in media

imitation of a real event using a mathematical model of a set of formulas animation

6 The following is a list of stages when an email is sent and received.

Write the numbers from 1 to 8 in the right-hand column to put each stage of the process in the correct order. The first one has been done for you.

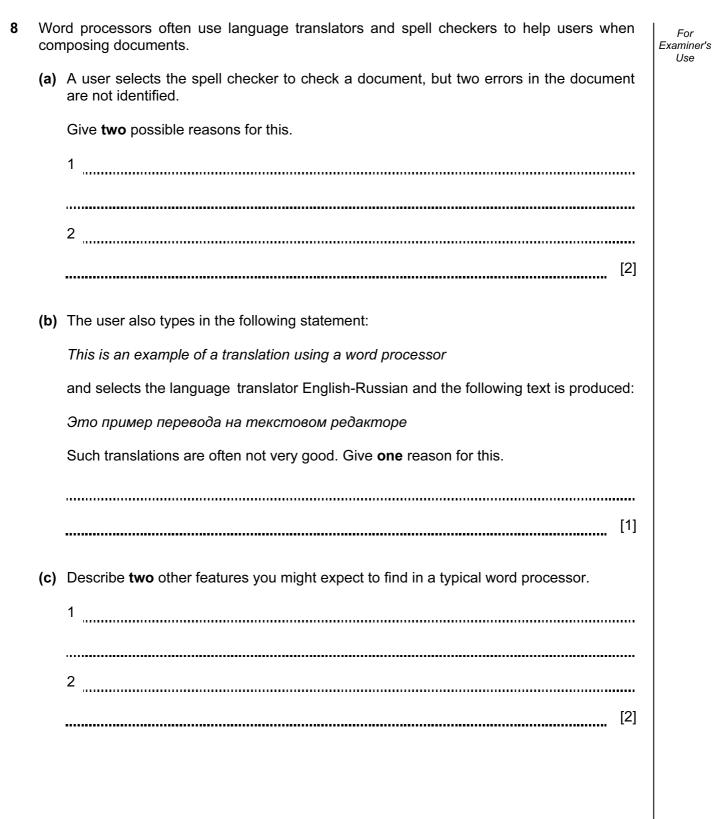

Description of stage	Order of stage
The message travels over the Internet and arrives at recipient's ISP mail server	
Message sent to sender's ISP mail server	
Recipient logs on to read his messages	
The sender composes his message and activates the send command	1
Message held in recipient's electronic mail box	
ISP mail server examines address associated with message	
Message retrieved and sent to recipient's computer to be opened and read	
Sender's ISP mail server decides how to route the message

11 A database was set up showing the largest ocean-going liners. Part of the database is shown below.

11

12 (a) A spreadsheet was set up to determine if a triangle is right-angled. Part of the spreadsheet is shown below.

For Examiner's Use

[1]

	А	В	С	D	Е
1	а	b	С	$a^2 + b^2 - c^2$	is triangle right-angled?
2	2	5	6	-7	No
3	3	4	5	0	Yes
4	3	6	8	-19	No
5	5	12	13	0	Yes
6	7	24	25	0	Yes
7	8	15	17	0	Yes
(i)	What formula n	nust be in D3?			
(ii)	Complete the f	ormula that mu	st be in columr	F to generate	the output Yes

(ii) Complete the formula that must be in column E to generate the output Yes or No. Use cell E3 as your example.

= IF (D3 = 0, _____, ____)

(iii) How could the spreadsheet be used if a and b values were known and it was required to predict the value of c to get a right-angled triangle?

..... [2] (b) Apart from the use of formulas and functions, give three features of spreadsheet software.

For

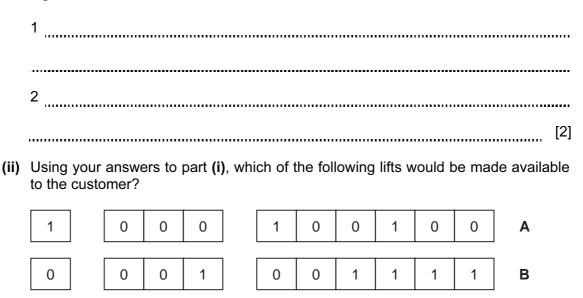

13 A large hotel uses eight lifts (elevators) to carry passengers between its sixty floors.

A computer is used to control and monitor the lifts. Each lift has three registers to represent its state.

(c) (i) A customer is on the 14th floor and wants to go to the 50th floor. She presses the button to call the lift.

What **two** pieces of information would the computer check to identify which of the eight lifts should be made available?

Describe what input the engineer might use to check that the computer can correctly identify a fault condition.

[2]

For

- **14** The following flowchart shows how a computer and sensors are used to control the environment in a greenhouse. Temperatures must be between 25°C and 35°C. Light must be between 50 and 80 light units.
 - (a) Complete the flowchart, using item number only, from the list of items given below.

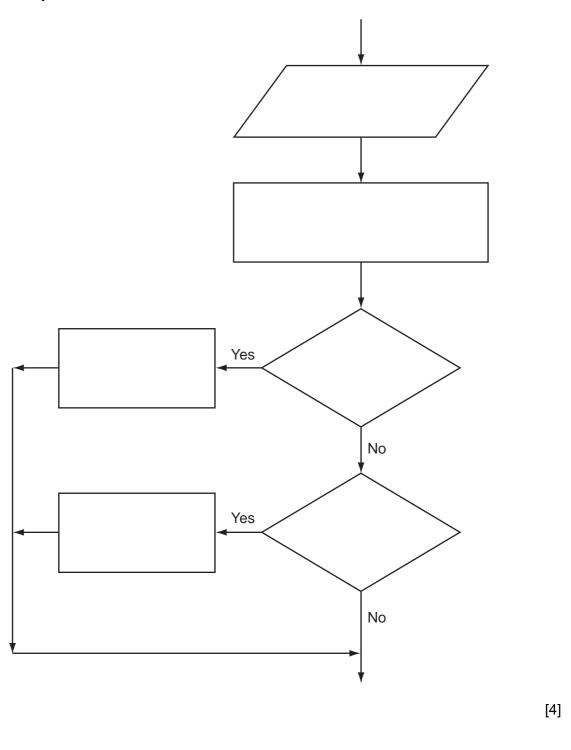

For

(b) The computer also checks on humidity levels (using humidity sensors) which must be between the values of 40 and 90.

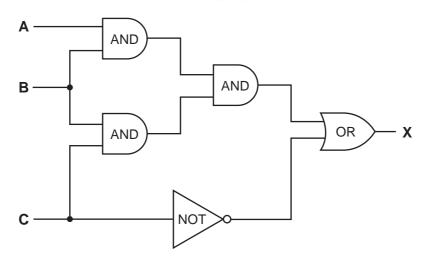

If humidity is too low, water is sprayed into the air. If humidity is too high, fresh air is allowed to enter.

Write the necessary commands in the following flowchart section to show how the humidity levels are controlled:

For

15 (a) Complete the truth table for the following logic circuit:

Α	В	С	X
0	0	0	
0	0	1	
0	1	0	
0	1	1	
1	0	0	
1	0	1	
1	1	0	
1	1	1	

[4]

(b) The above logic circuit uses AND, OR and NOT gates. Name another logic gate and complete its truth table.

Α	В	X
0	0	
0	1	
1	0	
1	1	

[3]

.....

16	A small café sells five types of item:	
----	--	--

bun	0.50	dollars
coffee	1.20	dollars
cake	1.50	dollars
sandwich	2.10	dollars
dessert	4.00	dollars

Write an algorithm, using pseudocode or a program flowchart only, which

- inputs every item sold during the day,
- uses an item called "end" to finish the day's input,
- adds up the daily amount taken for each type of item,
- outputs the total takings (for all items added together) at the end of the day,
- outputs the type of item that had the highest takings at the end of the day.

[6]
