Summer 2017

Pearson Edexcel International GCSE In Further Pure Mathematics (4PM0) Paper 02

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications are awarded by Pearson, the UK's largest awarding body. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at <u>www.edexcel.com</u> or <u>www.btec.co.uk</u>. Alternatively, you can the details on touch with us using contact aet in our us page at www.edexcel.com/contactus.

Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Summer 2017 Publications Code 4PM0_02_1706_MS All the material in this publication is copyright © Pearson Education Ltd 2017

General Marking Guidance

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme.

Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.

- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.
- Types of mark
 - $\circ\,$ M marks: method marks
 - A marks: accuracy marks
 - B marks: unconditional accuracy marks (independent of M marks)
- Abbreviations
 - cao correct answer only
 - $\circ\,$ ft follow through
 - $\circ~$ isw ignore subsequent working
 - $\,\circ\,$ SC special case
 - \circ oe or equivalent (and appropriate)
 - o dep dependent
 - o indep independent
 - $\circ\,$ eeoo each error or omission
- No working
 - If no working is shown then correct answers normally score full marks
 - If no working is shown then incorrect (even though nearly correct) answers score no marks.
- With working

If there is a wrong answer indicated always check the working in the body of the script and award any marks appropriate from the mark scheme.

If it is clear from the working that the "correct" answer has been obtained from incorrect working, award 0 marks.

Any case of suspected misread loses two A (or B) marks on that part, but can gain the M marks. Mark all work on follow through but enter AO (or BO) for the first two A or B marks gained.

If working is crossed out and still legible, then it should be given any appropriate marks, as long as it has not been replaced by alternative work.

If there are multiple attempts shown, then all attempts should be marked and the highest score on a single attempt should be awarded.

• Follow through marks

Follow through marks which involve a single stage calculation can be awarded without working since you can check the answer yourself, but if ambiguous do not award.

Follow through marks which involve more than one stage of calculation can only be awarded on sight of the relevant working, even if it appears obvious that there is only one way you could get the answer given.

• Ignoring subsequent work

It is appropriate to ignore subsequent work when the additional work does not change the answer in a way that is inappropriate for the question: eg. incorrect cancelling of a fraction that would otherwise be correct.

It is not appropriate to ignore subsequent work when the additional work essentially shows that the candidate did not understand the demand of the question.

Linear equations

Full marks can be gained if the solution alone is given, or otherwise unambiguously indicated in working (without contradiction elsewhere). Where the correct solution only is shown substituted, but not identified as the solution, the accuracy mark is lost but any method marks can be awarded.

• Parts of questions

Unless allowed by the mark scheme, the marks allocated to one part of the question CANNOT be awarded in another

General Principles for Further Pure Mathematics Marking

(but note that specific mark schemes may sometimes override these general principles)

Method mark for solving a 3 term quadratic equation:

1. Factorisation:

 $(x^2+bx+c)=(x+p)(x+q)$, where |pq|=|c| leading to x=...

 $(ax^2+bx+c) = (mx+p)(nx+q)$ where |pq| = |c| and |mn| = |a| leading to $x = \dots$

2. Formula:

Attempt to use the **correct** formula (shown explicitly or implied by working) with values for *a*, *b* and *c*, leading to x = ...

3. <u>Completing the square:</u>

 $x^{2} + bx + c = 0$: $(x \pm \frac{b}{2})^{2} \pm q \pm c = 0$, $q \neq 0$ leading to x =

Method marks for differentiation and integration:

1. Differentiation

Power of at least one term decreased by 1. $(x^n \rightarrow x^{n-1})$

2. Integration:

Power of at least one term increased by 1. $(x^n \rightarrow x^{n+1})$

Use of a formula:

Generally, the method mark is gained by either

quoting a correct formula and attempting to use it, even if there are mistakes in the substitution of values

or, where the formula is <u>not</u> quoted, the method mark can be gained by implication from the substitution of <u>correct</u> values and then proceeding to a solution.

Answers without working:

The rubric states "Without sufficient working, correct answers may be awarded no marks".

General policy is that if it could be done "in your head" detailed working would not be required. (Mark schemes may override this eg in a case of "prove or show...."

Exact answers:

When a question demands an exact answer, all the working must also be exact. Once a candidate loses exactness by resorting to decimals the exactness cannot be regained.

Rounding answers (where accuracy is specified in the question)

Penalise only once per question for failing to round as instructed - ie giving more digits in the answers. Answers with fewer digits are automatically incorrect, but the isw rule may allow the mark to be awarded before the final answer is given.

Question Number	Scheme	Mar	ks
1(a)	B1 each line correct	B1B1B	31 (3)
(b)	Shade in or out for B1 (R not needed)	B1ft	(1)
(c)	$\left(y+2x\right)_{\max} = 10\frac{2}{3}$	B1	(1)
			[5]

- **B1** B1 for each line which is correct ie crosses both axes at the correct points.
- **B1** *x* axis intercepts are: origin, 6 and 2
- **B1** Enter B1B1B1, B1B1B0, B1B0B0
- **(b)**
- **B1ft** Correct area shaded. Follow through their 3 lines **provided** area shown is the internal area above the *x*-axis
- (c)
- **B1** Correct answer only (or one correct answer clearly indicated). Allow $10.5 \le x \le 10.8$ (as it can be obtained by calculation or by reading values from the grid)

2	$x^2 - 6x + 5 = 11 - x$		M1	
	$x^2 - 5x - 6 \ (=0)$	OR $y^2 - 17y + 60 (=0)$	A1	
	(x-6)(x+1) (=0)	(y-12)(y-5) (=0)	dM1	
	x = 6, y = 5		A1	
	x = -1, y = 12		A1 [5]

- M1 Obtain an equation in one variable. Must be quadratic but no simplification needed
- A1 Correct simplified 3 term quadratic equation, terms in any order
- dM1 Solve their quadratic by any valid means (see "General Principles")
- A1 Either (x, y) pair correct or both x values or both y values correct
- A1 Second pair correct. It must be clear how the values are paired. (Horizontally as shown or vertically is sufficient.)

3 (a)
$$b^2 - 4ac = p^2 - 36 < 0$$
 oe M1A1

$$-6 or $|p| < 6$ A1 (3)$$

(**b**)
$$49 - 4q^2 \ge 0$$
 $-\frac{7}{2} \le q \le \frac{7}{2}$ (or 3.5, $\sqrt{12.25}$) Allow with $<$ or $=$ M1

Question Number	Scheme	Marks	
	$q = \pm 3, \pm 2, \pm 1, 0$	A1A1cso (3) [6]	
(a) M1 A1 A1 (b)	Use the discriminant to form an inequality or equation. Can have $(\leq, <, =, >, \geq$ Correct inequality Allow with <0 or ≤ 0 . May be implied by the correct an $-6 , p > -6 and p < 6, p < 6 score A1 but p > -6 or p < 6 scores$	swer.	
(b) M1	Use the discriminant to form an inequality or equation for q and attempt to solve it. (Inequality/equation for q^2 and no further work scores M0) $(x \pm q)(x \pm q) = 0$ so $q = \pm 3.5$ oe scores M0		
A1 A1cso	Any 4 correct values - can come from an equation. All 7 correct - must have used an inequality.		
4(a)	a = 6t + 2	M1A1	
	t = 2 $a = 14$ (m/s ²)	A1ft (3)	
(b)	$s = t^3 + t^2 + 5t \ (+c)$	M1,A1(M1 on e-PEN)	
	s = 51 (m)	A1cso (3)[6]	
(a) M1	Differentiate the expression for <i>v</i> . Min one term differentiated (see "General and none integrated.	Principles")	

A1 Correct differentiation

A1ft	Substitute $t = 2$ to obtain the acceleration. Follow through their expression for the accel,
	provided attempt at differentiation has been made (ie M mark earned).

- **(b)**
- M1 Attempt to integrate the expression for *v*, constant of integration not needed. Min 2 of 3 terms to be integrated and none differentiated.
- A1 Correct integration with or without *c*

(M1 on e-PEN)

```
A1cso For s = 51 (m) A constant of integration must have been included and made =0
```

ALT (b) By definite integration:

M1: Integrate min of 2 of 3 terms (ignore limits); A1: Correct integration A1cso: For s = 51 (m) by substitution of limits 0 and 3.

NB
 Parts not labelled: Int and sub
$$t = 3$$
, assume (b); Diff and sub $t = 2$, assume (a)

 5(a)
 $(2x+3)^2 = x^2 + (4x-5)^2 - 2x(4x-5)\cos 60^\circ$
 M1A1

 $4x^2 + 12x + 9 = x^2 + 16x^2 - 40x + 25 - 4x^2 + 5x$
 M1A1

Question Number	Scheme	Marks	
	$9x^2 - 47x + 16 \ (=0)$ oe	A1	
	$x = \frac{47 \pm \sqrt{47^2 - 4 \times 9 \times 16}}{18} (= 4.8561, \ 0.36608)$	dM1	
	$BC = 4x - 5 > 0 \therefore x = 4.86$	A1 (5)	
(b)	$AB = 4.8561, BC = 4 \times 4.856 - 5 (= 14.42)$		
	$AB = 4.8561, BC = 4 \times 4.856 - 5 (= 14.42)$ Area = $\frac{1}{2} \times 4.8561 \times (4 \times 4.856 - 5) \sin 60^{\circ}$		
	$= 30.33 = 30.3 (\mathrm{cm}^2)$	A1 (3) [8]	
(a) M1 A1	Use the cosine rule in $\triangle ABC$ to form a quadratic equation in x Correct, unsimplified, equation		
A1	Correct simplified equation, terms in any order. (3TQ; $\cos 60^\circ = \frac{1}{2}$ used.)		
dM1 A1	Solve their 3TQ by any valid means. Accept the solution of an incorrect equation by formula only if the substitution is shown or the formula quoted. (Calculator solutions accepted only if the final answer is correct, but not necessarily rounded.) Use the expression for <i>BC</i> in terms of <i>x</i> to identify the correct value of <i>x</i> . Award if 2 values for <i>x</i> are shown, followed by a clearly identified final single value.		
(b) M1 A1ft A1cao	Must be 3 significant figures.For using any complete method for finding the area of the triangle, including using their value of <i>x</i> to find the lengths of the sides needed.Correct numbers used, follow through their value of <i>x</i>.Correct area, no ft. Must be 3 significant figures unless penalised in (a)Use of 4.86 will lose the final A mark for premature approximation as it leads to 30.4.		
ALT	For (b) Use any other complete method to find the area. Must attempt to find all the necessary terms using their value of <i>x</i>		
	Eg: Heron's formula: Area = $\sqrt{s(s-a)(s-b)(s-c)}$ where $s = \frac{1}{2}(a+b+c)$		
	Or $\frac{1}{2}$ × base × height		
1	M1 method correct and complete; A1ft A1 as main scheme	I	
6 (a)	$p^{6} + 6p^{5}(qx) + \frac{6 \times 5}{2!} p^{4}(qx)^{2} + \frac{6 \times 5 \times 4}{3!} p^{3}(qx)^{3} + \frac{6 \times 5 \times 4 \times 3}{4!} p^{2}(qx)^{4}$	M1	
	$p^{6} + 6p^{5}(qx) + \frac{6 \times 5}{2!} p^{4}(qx)^{2} + \frac{6 \times 5 \times 4}{3!} p^{3}(qx)^{3} + \frac{6 \times 5 \times 4 \times 3}{4!} p^{2}(qx)^{4}$ = $p^{6} + 6p^{5}qx + 15p^{4}q^{2}x^{2} + 20p^{3}q^{3}x^{3} + 15p^{2}q^{4}x^{4}$ $4 \times 15p^{2}q^{4} = 9 \times 15p^{4}q^{2}$	MI A1A1 (3)	

Question Number	Scheme	Marks	
	$4q^2 = 9p^2$ oe	A1	
	$4q^{2} = 9p^{2} \text{ oe}$ $(p+q)^{6} = 15625 (p+q=5)$ $4(5-p)^{2} = 9p^{2}$	M1 (NB A1 on e-PEN)	
	$4(5-p)^2 = 9p^2$		
	$10-2p = \pm 3p$	M1	
	p = 2 q = 3 or $p = -10 q = 15$	A1A1 (6) [9]	
(a)M1	Apply the binomial expansion to $(p+qx)^6$ or $p^6 \left(1+\frac{qx}{p}\right)^6$ or use Pascal'	s triangle. Must	
	start $p^6 +$ and have qx (or appropriate power of this) in at least one t	erm or start	
	$p^{6}(1+)$ and have $\frac{qx}{p}$ (or appropriate power of this) in at least one ter	m. Can have 3!, 4!	
	or 6, 24 (but not 3, 4)		
	If $\begin{pmatrix} a \\ b \end{pmatrix}$ or C_b^a seen, no marks until coefficients as shown are seen (or final	l expansion is	
A1			
	Any 3 terms correct.(p^6 can be one of these.) Allow with $(qx)^2$ etc provided the numerical part has been simplified.		
A1	All 5 terms correct. Brackets expanded for this mark.		
(b) M1	Equate 4 times their coeff of x^4 to 9 times their coeff of x^2 . Allow if powers of x included or $x = 1$ substituted in each term. Award on basis of their coefficients even if no powers of p		
A1	included. Simplified equation as shown. No <i>x</i> seen now. This mark can be gained i substituted. (Not follow through.) Coefficients can be a multiple of those		
M1	Obtain a second equation connecting p and q by substituting $x = 1$ in $f(x)$		
(A1 on e-PEN)	$(p + \text{their } q)^6 = 15625 \text{ or sub } x = 1, q = \frac{3}{2}p$ in their expansion		
M1	Eliminate either p or q between their 2 equations and obtain a linear equavariable.	tion in one	
A1 A1	One pair of values for p and q correct (NB must have previous M mark) Second pair correct. Pairing must be clear.		
NB:	If inequality signs used (due to $(p+q) > 0$) treat as = but deduct the final earned.	l A mark if	
7 (a)	Surface area = $2(5x^2 + hx + 5xh) = 480$	M1	
<i>(a)</i>			

Question Number	Scheme	Marks
	$V = 5x^2h = 5x^2 \times \frac{480 - 10x^2}{12x}$	dM1
	$V = 200x - \frac{25}{6}x^3$ *	A1cso (4)
(b)	$\frac{\mathrm{d}V}{\mathrm{d}x} = 200 - \frac{25}{2}x^2$	M1
	$\frac{\mathrm{d}V}{\mathrm{d}x} = 0 x = 4 (x > 0)$	dM1A1
	$V = 200 \times 4 - \frac{25}{6} \times 4^3 = 533\frac{1}{3} \text{ (accept 533 or } \frac{1600}{3}\text{)}$	dM1A1cao (5) [9]

- **(a)**
- M1 Attempt to obtain a **dimensionally correct** expression for the surface area in terms of *x* and *h* and equate to 480
- A1 Correct equation, as shown or equivalent.
- **dM1** Use the volume and eliminate *h* from the expression
- A1cso Obtain the given expression for V in terms of x from correct working

(b)

M1 Differentiate the expression for V. $200x \rightarrow 200$ or $\frac{25x^3}{6} \rightarrow kx^2$ must be seen with no

integration.

- **dM1** Equate their derivative to 0 and solve for *x*
- A1 Correct value of x. Must be positive, negative value need not be shown but if seen ignore it.
- **dM1** Substitute their **positive** value of *x* in the expression for *V* and obtain a numerical value for *V*. Depends on both M marks above.
- A1cao For the correct value of V. Can be exact or at least 3 sig figs.
- **NB** If 2 values of *x* are both **given** and **used**, the correct final answer must be clearly identified or both A marks are lost.

8(a)
$$(\alpha + \beta)^2 = p^2 \quad \alpha\beta = +7$$

I

B1

Question Number	Scheme	Marks	
(i)	$\alpha^{2} + \beta^{2} = \left(\alpha + \beta\right)^{2} - 2\alpha\beta, = p^{2} - 14$	M1,A1	
(ii)	$\alpha^2 \beta^2 = 49$	B1ft (4)	
(b)	$7(p^2-14)=5\times49$		
	$p^2 = 49$ $p = \pm 7$	M1A1 (2)	
(c)	$\frac{2p}{\alpha^2} + \frac{2p}{\beta^2} = \frac{2p(\alpha^2 + \beta^2)}{\alpha^2 \beta^2} = \frac{2p(p^2 - 14)}{49} = \frac{14 \times 35}{49} = 10$	M1A1	
	$\frac{2p}{a^2} \times \frac{2p}{\beta^2} = \frac{4p^2}{\alpha^2 \beta^2} = \frac{4 \times 49}{49} = 4$	B1	
	$x^2 - 10x + 4 = 0$	M1A1 (5) [11]	
(a) D1	Connect and dust of the meets (see he implied by use of $2m\theta - 14$) and (set ($(2)^2 = 2^2$	
B 1	Correct product of the roots (can be implied by use of $2\alpha\beta = 14$) and $(\alpha + \beta)$ somewhere. (Ignore $\alpha + \beta = p$)	p = p seen	
(i)M1	Correct algebraic expression ready for the required substitution.		
A1	Correct expression. $(p^2 - 14)$		
(ii)B1ft	Correct numerical value, follow through their product of the roots.		
(b) M1 A1 (c)	Substitute their answers from (a) in the given equation and solve for p . Correct values for p - both required.		
	Add the roots of the new equation to obtain a single fraction (denominator to	be $\alpha^2 \beta^2$ and	
M1	substitute their positive value of p and values of $(\alpha + \beta)^2$ and $\alpha^2 \beta^2$ to obtain a numerical		
A1 B1	value of this sum. Correct value of this sum Correct value of the product of the roots		
M1	Use equation x^2 – sum of roots × x + product of roots (=0) with their sum and product		

(numerical values needed) and with or without "= 0"

A1 Completely correct equation as shown or equivalent to the one shown.

9 (a)
$$x^3 - 4x^2 - 4x + 16 = (x-2)(x-a)(x-b)$$

Question Number	Scheme	Marks
	$=(x-2)(x^2-(a+b)x+ab)$	
	$x^{3}-2x^{2}-(a+b)x^{2}+2(a+b)x+abx-2ab$	M1
	-ab = 8, -(a+b)-2 = -4 $a = -2, b = 4$	M1A1A1 (4)
	ALT: $(x-2)(x^2-2x-8)$, $=(x-2)(x-4)(x+2)$ M1, M1 a = -2, $b = 4$ A1A1 corr answers	
(b)	D:(0,16)	B1
	$\frac{\mathrm{d}y}{\mathrm{d}x} = 3x^2 - 8x - 4$	M1
	At D grad = -4	A1
	y - 16 = -4x oe	dM1A1 (5)
(c)	$y=0 \implies x=4 \text{ or } x=4 \implies y=0 \ (\therefore \text{ passes through } B)$	B1 (1)
(d)	Area = $\int_0^4 (16 - 4x - (x^3 - 4x^2 - 4x + 16)) dx$	M1
	$= \left[\frac{4}{3}x^{3} - \frac{1}{4}x^{4}\right]_{0}^{4}$	dM1A1
	$=\frac{4}{3}\times 4^{3}-\frac{1}{4}\times 4^{4}(-0)$	dM1
	$= 21\frac{1}{3}$ (21.3 or better) or $\frac{64}{3}$	A1 (5) [15]

(a)

M1 Write the cubic as a product of 3 linear brackets and multiply out these 3 brackets. One bracket must be $(x \pm 2)$

Question Number	Scheme	Marks
M1 A1A1	Extract 2 equations in <i>a</i> and <i>b</i> and solve them Correct values for <i>a</i> and <i>b</i> . Coordinates of the points accepted. Award A1A1, A1A0 or A0A0	
ALT 1	M1 Divide given cubic by $(x \pm 2)$ M1 Factorise the quadratic obtained. A1A	1 Correct
	values of <i>a</i> and <i>b</i> deduced from the resulting brackets. Coordinates of the point No errors in the working for A1A1 Division by $x+2$ can score M1M1	-
ALT 2	Factorise the given cubic M1 : $(x^2-4)(x-4) (=0)$ M1 $(x-2)(x+2)(x$	-4)(=0)
ALT 3	A1A1 Correct values for <i>a</i> , <i>b</i> A1A1 Coordinates of the points accepted. Remainder/factor theorem: M1 try $x = \pm$ any factor of 16 M1 Try more factors of 16 until 2 factors for	und giving no
OR	remainder. A1A1 correct values of a , b Coordinates of the points accepted. No working shown and correct answers stated, $4/4$	
(b) B1 M1 A1 dM1	Correct <i>y</i> coordinate for <i>D</i> . Differentiate the given equation for <i>C</i> . Minimum 2 terms differentiated and no integration. Substitute $x = 0$ to obtain the correct gradient at <i>D</i> Use any complete method to obtain an equation of <i>l</i> using their gradient and <i>y</i> coordinate. If $y = mx + c$ used there must be an attempt to find the value of <i>c</i> . Depends on M mark above.	
A1	Correct equation in any form.	
(c)B1	Substitute $y = 0$ or $x = 4$ into the correct equation of <i>l</i> to show <i>l</i> passes through (4, 0) This correct equation need not have been awarded all the marks in (b) (No conclusion need be given here.)	
(d)		
M1	Use Area = $\int_{0}^{4} (\text{line} - \text{curve}) dx$ - either way round - or use the difference of	2 separate
dM1 A1 dM1 A1	 integrals, both with limits 0 and 4. Integrate their single function or both integrals. Depends on the first M mark Correct integration for their method. Substitute the correct limits (0 and 4) in their integrated expression(s) and obtain a value for the area. Depends on the both M marks Correct area, exact or min 3 significant figures. Must be positive. 	
ALT	By splitting the area:	
M1	Require area = area $\Delta OBD - \int_{0}^{2} (x^{3} - 4x^{2} - 4x + 16) dx - \int_{2}^{4} (x^{3} - 4x^{2} - 4x + 16) dx$.	
dM1 A1 dM1	Triangle area by formula or integration of equation of l and curve equation integrated Correct integration (and area of triangle = 32 if by formula) Substitute the limits into their integrated expressions and obtain a value for the area. Depends on both M marks.	
A1	Correct area, exact or min 3 significant figures. Must be positive.	
10 (a)	$AC = \sqrt{8^2 + 3^2} = \sqrt{73}$ $\tan 45^\circ = \frac{CH}{AC}, CH = \sqrt{73} = 8.54 \text{ cm}$ M1A1 (4)	

(c) $FN^2 = FH^2 + \left(\frac{1}{2}CH\right)^2$ $= 73 + \frac{73}{4}, FN = \sqrt{91.25} = 9.55 \text{ cm}$ (d) $\tan GFB = \frac{GB}{FG} = \frac{\sqrt{73}}{3}$ $\angle GFB = 70.7^\circ$ (e) $\sin FNG = \frac{FG}{FN} = \frac{3}{\sqrt{91.25}}$ $\angle FNG = 18.3^\circ$ (f) Use Pythagoras, with a + sign to obtain the length of AC A1 Correct length AC, seen here or later (or implied by a correct final answer). M1 Use tan $45^\circ = \frac{CH}{AC}$ (fraction either way up) A1 Correct length of CH. Must be 3 significant figures (b)M1 Use sin $45^\circ = \frac{CH}{AH}$ or $\frac{AC}{AH}$ or Pythagoras with a + sign (or any other complemented) A1Rt AH = their $CH \times \sqrt{2}$ or equivalent. (May be implied by a correct final answer.) A1 Correct length AH. Must be 3 significant figures unless already penalised in (a). (c) M1 Use Pythagoras with a + sign to ΔFHC A1R Correct length AH. Must be 3 significant figures unless already penalised in (a). (c) M1 Use sign 45° or $\cos 45^\circ = \frac{CH}{AH}$ or $\frac{AC}{AH}$ or Pythagoras with a + sign (or any other complementhod) A1Rt AH = their $CH \times \sqrt{2}$ or equivalent. (May be implied by a correct final answer.) A1 Correct length AH. Must be 3 significant figures unless already penalised in (a). (c) M1 Use Pythagoras with a + sign in ΔFHC A1Rt Correct numbers, follow through their AC and CH. A1 Correct length FN. Must be 3 significant figures unless already penalised above. (d) M1 Use any complete method for finding $\angle GFB$ or $\angle HEC$ A1Rt Correct numbers, follow through their AC and CH. A1 Correct numbers used in their method, follow through any previously found lengths used A1 Correct numbers used in their method, follow through lengths found lengths used A1 Correct numbers used in their method, follow through lengths found previously. A1 Correct numbers in their choice of method, follow through lengths found previously. A1Rt Correct numbers in their choice of method, follow through lengths found previously. A1Rt Correct numbers in their choice of method, follow through lengths found previously.	Question Number	Scheme	Marks

11 (a) $\log pq^4 - \log pq^2 = \log \left(\frac{pq^4}{r} \right) = \log q^2$ or $2\log q$ M1	1	Correct answer. Must be in degrees and correct to 1 decimal place unless per		
$\left \begin{array}{c} 2 \\ 2 \\ 2 \\ 2 \\ 2 \\ 2 \\ 2 \\ 2 \\ 2 \\ 2 $	11 (a)	$\log pq^4 - \log pq^2 = \log\left(\frac{pq^4}{pq^2}\right) = \log q^2 \text{ or } 2\log q$	M1	

Question Number	Scheme	Marks
	$\log pq^6 - \log pq^4 = \log\left(\frac{pq^6}{pq^4}\right) = \log q^2 \text{ or } 2\log q$	A1
	$\therefore \log pq^4 - \log pq^2 = \log pq^6 - \log pq^4 *$	A1cso (3)
	ALT: $\log pq^4 - \log pq^2 = \log p + 4\log q - \log p - 2\log q = 2\log q$ etc	
(b)	$d = \log q^2$ or $2\log q$	B1
	$a = \log pq^2 - \log q^2, = \log p$	M1,A1 (3)
(c)	$S_{n} = \frac{n}{2} \left(2a + (n-1)d \right) = \frac{n}{2} \left(2\log p + (n-1)\log q^{2} \right)$	M1A1
	$= n \log \left(p q^{(n-1)} \right)$	M1A1cso (4)
		[10]

(a)M1 Apply log theory to either side of the equation to obtain a single log. Statements such as $\log pq^4 = 4\log pq$ and $\log \frac{pq^4}{pq^2} = \log pq^2$ score M0 if they appear in both or M1A0 if only in one.

- A1 Apply log theory to the other side of the equation to obtain a single log. Both applications must be correct.
- A1cso Conclusion given. Can quote the given result, use # or say eg "(hence) shown" "so same" or "qed"

ALT

M1
$$\log pq^4 - \log pq^2 = \log\left(\frac{pq^4}{pq^2} \times \frac{q^2}{q^2}\right) = \log\left(\frac{pq^6}{pq^4}\right) = \log pq^6 - \log pq^4$$

- A1A1 Work shown correct includes the conclusion due to layout. Incorrect work gets A0A0 (b)
 - **B1** Correct common difference in either form shown. May be implied by subsequent working.
- M1 Subtract their common difference from the second term or twice their common difference from the third term.
- A1 Correct first term. Correct answer w/o working scores 3/3
- (c)
- M1 Use the (correct) formula for the sum of the first *n* terms with their *a* and *d*
- A1 Correct *a* and *d* in the formula (**no ft**)
- M1 Use log theory to combine the logs in their sum.
- A1cso Correct final answer, must be as shown.
- **NB** If *s* is used instead of *n*, all but final A mark is available. If *s* is replaced with *n* at end, all marks available.
