**PHYSICAL SCIENCE**

**0652/05**

Paper 5 Practical Test

**October/November 2009**

CONFIDENTIAL INSTRUCTIONS

**Great care should be taken to ensure that any confidential information given does not reach the candidates either directly or indirectly.**

---

**The Supervisor's attention is drawn to the form on page 4 which must be completed and returned with the scripts.**

If you have any queries regarding these instructions, please contact CIE

by e-mail: [International@cie.org.uk](mailto:International@cie.org.uk)

by phone: +44 1223 553554

by fax: +44 1223 553558

stating the nature of the query and the syllabus number quoted above.

---

This document consists of **4** printed pages.

### Instructions for preparing apparatus

These instructions detail the apparatus, reagents and specimens required by each candidate for each experiment in this paper. A summary of the questions that will be presented to the candidates is included, where appropriate, to allow the teacher to test the apparatus appropriately. **No access is permitted to the question paper in advance of the examination session.**

It is assumed that the ordinary apparatus of a science laboratory will be available, including a supply of purified water (distilled or deionised).

If arrangements are made for different sessions for different groups of candidates, care must be taken to ensure that the different groups of candidates are effectively isolated so that **no information passes between them.**

### For Question 1

*Each candidate will require:*

- (i) a rectangular glass or plastic block of known refractive index ;
- (ii) at least 2 sheets of A4 paper ;
- (iii) 4 long pins ;
- (iv) a protractor ;
- (v) a drawing board or similar into which pins may be pushed ;
- (vi) a ruler.

Each candidate will require the refractive index of the block. If similar blocks are used for all candidates it is not necessary to determine the refractive index for each block.

Candidates will be required to attach their ray diagrams to the question paper.

**For Question 2**

*Each candidate will require:*

- (i) about 10 cm<sup>3</sup> of potassium manganate(VII) solution, concentration about 0.01 mol / dm<sup>3</sup> labelled "solution **A**". See below for instructions regarding this concentration and the other two solutions **B** and **C** ;
- (ii) about 10 cm<sup>3</sup> of potassium manganate(VII) solution, concentration about 0.005 mol / dm<sup>3</sup> labelled "solution **B**";
- (iii) about 10 cm<sup>3</sup> of potassium manganate(VII) solution, concentration about 0.0025 mol / dm<sup>3</sup> labelled "solution **C**" ;
- (iv) a dropping pipette ;
- (v) 6 test-tubes. If fewer are provided some will require washing ;
- (vi) a 10 cm<sup>3</sup> measuring cylinder ;
- (vii) about 15 cm<sup>3</sup> of freshly made iron(II) sulfate solution containing dilute sulfuric acid, labelled "solution **X**". The concentration should be approximately 0.10 mol dm<sup>-3</sup> (about 28 g / dm<sup>3</sup> of FeSO<sub>4</sub>.7H<sub>2</sub>O) ;
- (viii) access to the following :
  - dilute sulfuric acid about 1 mol dm<sup>-3</sup>
  - dilute hydrochloric acid about 1 mol dm<sup>-3</sup>
  - sodium hydroxide solution about 1 mol dm<sup>-3</sup>
  - dilute nitric acid about 1 mol dm<sup>-3</sup>
  
  - silver nitrate solution
  - barium chloride solution
  - both solutions suitable for anion tests

It is suggested that sufficient 0.01 mol dm<sup>-3</sup> potassium manganate(VII) solution is prepared to enable this to be diluted appropriately to form solution **B** and **C**.

The concentration of the iron(II) sulfate solution should be adjusted if necessary to ensure that no more than 10 drops are required to decolourise 3 cm<sup>3</sup> of the lowest concentration of potassium manganate(VII) i.e. solution **C**.

These solutions should be made in sufficient bulk to supply all candidates with the same solutions.

Spare materials and equipment should be available and can be provided without penalty. **Candidates should be made aware of this.**

*Information required from the Supervisor:*

**The Supervisor is asked to carry out the experiments and to enter the results on a spare copy of the examination paper, clearly marked 'Supervisor's Results' and showing the Centre number. This should be returned with the scripts. Failure to do so may cause the candidates to be penalised.**

**This form must be completed and returned in the envelope with the scripts together with the seating plan and the Supervisor's Results mentioned on page 3.**

**October/November 2009**

*General*

The Supervisor is invited to give details of any difficulties experienced by particular candidates giving their names and candidate numbers. These should include reference to:

- (a) difficulties due to faulty apparatus;
- (b) accidents to apparatus or materials;
- (c) physical handicaps, e.g. short sight, colour blindness;
- (d) any other information that is likely to assist the Examiner, especially if this cannot be discovered in the scripts;
- (e) any help given to a candidate.

*The Supervisor is asked to supply the following information:*

Plan of work benches, giving details by candidate numbers of the places occupied by the candidates for each session and a copy of the 'Supervisor's Results'.

NAME OF CENTRE .....

SIGNED .....  
*Supervisor*

CENTRE NUMBER .....

DECLARATION (to be signed by the Principal)

The preparation of this practical examination has been carried out so as to maintain fully the security of the examination.
