please write your roll no. at the space provided on each page IMMEDIATELY AFTER RECEIVING THE QUESTION PAPER.

NOTE: There are 9 Questions in all.

- Question 1 is compulsory and carries 20 marks. Answer to Q. 1 must be written in the space provided for it in the answer book supplied and nowhere else.
- The answer sheet for the $\mathbf{Q} .1$ will be collected by the invigilator after 45 minutes of the commencement of the examination.
- Out of the remaining EIGHT Questions answer any FIVE Questions, selecting at least TWO questions from each part, each question carries 16 marks.
- Any required data not explicitly given, may be suitably assumed and stated.

## Q. 1 Choose the correct or the best alternative in the following:

a. A C program contains the following declarations and initial assignments: int $\mathrm{i}=8, \mathrm{j}=5$;
Determine the value of the following expression. Use the values assigned to the variables for evaluating the expression.
2* ( $\left.\mathrm{i} / 5)+\left(4^{*}(\mathrm{j}-3)\right) \%(\mathrm{i}+\mathrm{j})-2\right)$
(A) 20
(B) 18
(C) 14
(D) 16
b. How many nodes are there in the full tree of degree 3 and height 4 ?
(A) 20
(B) 121
(C) 100
(D) None of these
c. Consider the following code segment
int $x=10, \mathrm{y}=10, \mathrm{a}, \mathrm{b}$;
int *p1=\&x, *p2=\&y;
a=*pl+(*p2)--;
b= ++ (*p2) - *p1;
printf ("\%d \%d", a,b);
what will be its output?
(A) $10 \quad 0$
(B) 200
(C) $0 \quad 20$
(D) $0 \quad 10$
d. What would be the output of the following C program?
struct Emp
\{ char name[20]; int age; float sal;
\};
Emp e1= \{"Amol", 21, 2345.00\};
Emp e2= \{ "Ajay", 23, 4500.75\};
void main()
\{
Emp \& func( );
func( )= e2;

```
printf ( "%s %d %f", e1.name, e1.age,e1.sal);
}
Emp & func()
{
return e1;
}
```

(A) Ajay 234500.75
(B) Amol 212345.00
(C) Error
(D) None of these
e. The postfix expression for the infix expression $\mathrm{A}+\mathrm{B}$ * ( C + D) / F + D * E is
(A) $\mathrm{AB}+\mathrm{CD}+* \mathrm{~F} / \mathrm{D}+\mathrm{E}$ *
(B) $\mathrm{A} * \mathrm{~B}+\mathrm{CD} / \mathrm{F} * \mathrm{DE}++$
(C) $\mathrm{ABCD}+* \mathrm{~F} /+\mathrm{DE} *+$
(D) $\mathrm{A}+* \mathrm{BCD} / \mathrm{F} * \mathrm{DE}++$
f. Evaluate the following prefix expression

-     * 63-41
(A) 25
(B) 23
(C) 15
(D) 12
g. Let p be the queue of integers defined as follows:
\#define MAXQ 500
struct queue
\{
int items[MAXQ];
int front, rear;
\} q;
To insert an element in the queue we can use
(A) ++q.items[q.rear]=x;
(B) q.items[++q.rear] $=\mathrm{x}$;
(C) q.items[++q.rear]++ $=x$;
(D) None of these
h. Representing polynomial in memory using linked list requires each node having
(A) 3 fields
(B) 4 fields
(C) $>4$
(D) None of these
i. How many ancestors do a node in the $\mathrm{N}^{\text {th }}$ level (root level=0) of a binary search tree have?
(A) N
(B) $\mathrm{N}+1$
(C) $2^{\mathrm{N}}$
(D) $2^{\mathrm{N}+1}$
j. Average case time complexity of the quicksort algorithm is more than
(A) $\mathrm{O}\left(\mathrm{N} \log _{2} \mathrm{~N}\right)$
(B) $\mathrm{O}\left(\mathrm{N}^{2} \log \mathrm{~N}\right)$
(C) $\mathrm{O}\left(\mathrm{N}^{2}\right)$
(D) $\mathrm{O}\left(\mathrm{N}^{3}\right)$

PART (A)
Answer at least any TWO Questions. Each question carries 16 marks.
Q. 2 a. Explain with the help of an example how floating point numbers are stored.
b. What do you understand by forced conversions? Explain with example.
c. Differentiate between logical and arithmetic shift.
d. Do the following conversions:
(i) $(25)_{8}=(?)_{16}$
(ii) $(\mathrm{A} 21)_{16}=(?)_{10}$
Q. 3 a. Can any of the three initial expressions in the for statement be omitted? If so, what are the consequences of each omission?
b. Write a program that will read a positive integer and print its binary equivalent.
c. What is the output of the following program?
const int a=124;
void main()
\{
const int *sample();
int *p;
p=sample();
printf ( "\%d",*p);
\}
const int *sample()
\{
return (\&a);
\}
d. Write a C program to reverse a given number.
Q. 4 a. Distinguish between the following:
(i) int (*m)[5]; and int *m[5]
(ii) int (*ptr)(); and int *ptr()
b. Write a program to show how elements of an array can be accessed using pointers.
c. With the help of an example show sequence of execution during function calls.
Q. 5 a. Write a program to copy the contents of one file into another file using command line arguments.
b. How is a string stored in memory? Is there any difference between string and character array? Write a C program to copy one string to another using pointers and without using library functions.
c. What is a bit field? Why are bit fields used with structures?

## PART (B)

Answer at least any TWO Questions. Each question carries 16 marks.
Q. 6 a. What is a heap? Write a C program to sort an array of integers using the heap sort method. Given: $6,5,3,1,8,7,2,4$ are elements of an array, show the different stages of sorting.
b. Write a C program to search for an element using binary search.
Q. 7 a. Write a C program to convert the given infix expression into its equivalent postfix form.
b. Write a C program to implement the working of a queue of integers using array. Provide the following operations.
(i) insert
(ii) delete
(iii) display
c. Write a C function to insert an element after a given node in a singly linked list.
Q. 8 a. Give the order of visitation of the binary tree shown in the following figure.(6)

(i) Preorder traversal
(ii) Inorder traversal
(iii) Postorder traversal
b. Write an C function to insert an element into a binary search tree.
c. Write a C function to search for an item in a binary search tree.
Q. 9 a. Write a C program for BFS traversal. Explain the same with the help of an example.
b. Explain with the help of examples the following:
(i) Adjacency Matrix
(ii) Linked Adjacency Lists
