ACCOUNTING - ORDINARY LEVEL

Solutions and Marking Scheme

INTRODUCTION

The solutions and marking scheme for Accounting Ordinary Level are attached.

Marks allocated to each line/figure are highlighted and shown in brackets like this alongside.

[6]

These marks are then totalled for each section/page and shown in a square like this

40

Accounting solutions are mainly computational and most figures are made up of more than one component. If a figure is not as per the solution, the examiners analyse the make-up of the candidate's figure and allocate some marks for each correct element included. To facilitate this, where relevant, the make-up of the figures is shown in workings attached to the solution.

In some Accounting questions there can be a number of alternative approaches and formats that can be validly used by candidates (e.g. A Bank Reconciliation Statement can start with either the bank statement figure or the adjusted bank account balance). The solutions provided here are based on the approaches adopted by the vast majority of teachers/candidates and alternatives are not included. In cases where a valid alternative solution is required, it is provided for the examiners, so that full marks can be gained for correct accounting treatment.

Sometimes the solution to a part of a question may depend on the answer computed in another part of that question. Where a calculation in section (a) is incorrect, allowance is made for this in subsequent sections.

Q.5 Interpretation of Accounts

40

(a) (i) **Opening Stock**

$$490,000 + 32,000 = 522,000 - 456,000 = \text{€}66,000$$

[10]

(ii) **Gross Profit Margin**

$$740,000 - 490,000 = 250,000$$

$$\frac{\text{Gross Profit}}{\text{Sales}} \times \frac{100}{1} = \frac{250,000}{490,000} \times \frac{100}{1} = 33.78\%$$

[10]

(iii) **Credit Period received from Creditors**

$$\frac{\text{Creditors} \times 365}{\text{Credit Purchases}} = \frac{75,000 \times 365}{456,000} = 60.03 \text{ days}$$

[10]

(iv) **The Acid Test Ratio**

$$\text{Liquid Assets} = \frac{\text{Current Assets} - \text{Closing Stock}}{\text{Current Liabilities}}$$

$$90,000 - 32,000 : 75,000$$

$$58,000 : 75,000$$

$$0.77 : 1$$

[10]

(b)

40

(i) **Interest Paid:** This is the extra money paid back to the lender for the use of money borrowed from a bank. It is the cost of borrowing money. [10]

(ii) **5% Debentures (2018/2019):** Debentures are long-term loans. They will be repaid in full during the years 2018/2019. They carry a fixed annual rate of interest of 5% . [10]

(iii) **Liquid Assets:** These are current assets that can be turned into cash quickly. Liquid Assets are made up of cash, bank and debtors. It is current assets less closing stock. [10]

(iv) **Shareholders Funds:** This is the amount of money owed to the shareholders by a Company. It consists of Issued Share Capital and Reserves. [10]

(c) (i) Yes. [10]

(ii) They have an Acid Test Ratio of 0.77:1 which is below the ideal of 1:1. This ratio tells us that they have liquid assets of 77cent for every euro they owe.

(d) (i) $\frac{\text{Net Profit} + \text{Interest}}{\text{Capital Employed}} \times 100 = \frac{106,000 + 7,000}{510,000} \times 100 = 22.15\%$ [10]

(ii) 2010 - 18%
2011 - 22%

Return on Capital Employed has increased by approx 4%. This is an excellent return as they would only have received about 3% from a bank.

Q.8 Marginal Costing

(a) **Selling Price** = $\frac{€400,000}{50,000}$ = €8 per unit [12]

(b) **Variable Cost per unit** = $\frac{€170,000}{50,000}$ = €3.40 per unit [10]

(c) **Contribution per unit**

Selling Price	8.00
– Variable Cost per Unit	<u>3.40</u>
Contribution	€4.60

[10]

(d) **Break- even -point** $\frac{\text{Fixed costs}}{\text{C.P.U.}} = \frac{36,000}{€4.60} = 7,827 \text{ units}$ [10]

(e) **Margin of Safety** Budgeted sales — Break-even-point

50,000 — 7,827 = 42,173 units

Sales value 42,173 × €8 = €337,384 [15]

(f) **Marginal Costing Statement** [15]

Sales	(55,000 x €6)	=	€330,000
Less Variable Costs	(55,000 x €3.40)	=	<u>€187,000</u>
Contribution			€143,000
Fixed Costs			<u>36,000</u>
Profit			<u>€107,000</u>

(g) Variable Cost is a cost that varies with the number of units produced e.g. raw materials. [8]
