Marking Scheme

Leaving Certificate Examination, 2004

Physics and Chemistry

Ordinary level

- Six questions to be answered.
- Answer any three questions from Section I and any three questions from Section II.
- All questions carry equal marks.
- However, in each section, one additional mark will be given to each of the first two questions for which the highest marks are obtained by the candidate.

In considering this marking scheme the following points should be noted:

- 1. In many instances only key words are given, words that must appear in the **correct context** in the candidate's answer in order to merit the assigned marks.
- 2. Words, expressions or statements separated by a solidus, /, are alternatives which are equally acceptable.
- 3. Answers that are separated by a double solidus, //, are answers which are mutually exclusive. A partial answer from one side of the // may not be taken in conjunction with a partial answer from the other side.
- 4. The descriptions, methods and definitions in the scheme are not exhaustive and alternative valid answers are acceptable.
- 5. The detail required in any answer is determined by the context and manner in which the question is asked and by the number of marks assigned to the answer in the examination paper. Therefore, in any instance, it may vary from year to year.
- 6. For lack of units, or incorrect units, one mark is deducted, when indicated.
- 7. Each time an arithmetical slip occurs in a calculation one mark is deducted.

Answer any eleven parts		
(a) State the principle of conservation of energy Energy cannot be created // total energy		3
or destroyed / it can only be changed from one form to another		
// is constant		3
(b) A cyclist increases her velocity from 5 m s ⁻¹ to 8 m s ⁻¹ in 6 seconds. What is her acceleration?		
v = u + at / 8 = 5 + a(6) / 3 (m s-1) 0.5 / $\frac{1}{2}$	····	3 3
(c) What is the value of absolute zero on the absolute scale?		
-/minus		3
273		3
(d) What is moant by a thermometric property?		
(d) What is meant by a thermometric property? (property) that changes		3
with temperature / heat		3
[example 3 only]		
(a) Cina and use of total internal notice		
(e) Give <u>one</u> use of total internal reflection. optical fibres / reflectors / endoscopes / diamonds / binoculars etc.		6
(f) What is meant by the diffraction of a wave?		
bending / spreading (stated / implied)		3
obstacle / narrow opening	•••	3
[diagram 6]		
(g) Give <u>one</u> example of a longitudinal wave		
sound / ultrasonic / compression waves on a spring etc.		6
[radio waves 0]		
(h) What is the name given to (i) height X, (ii) length Y?		_
(i) X = amplitude / maximum displacement / crest(ii) Y=wavelength	•••	3
(II) I -wavelength		5
(i) What is the purpose of a fuse in an electric circuit?		
protects // prevents // melts / blows		3
an appliance // a fire // if the current is too large [safety device 6]		3
(j) Complete the statement		
repel		3
negative		3

QUESTION 1(continued)

(k) State a law of electromagnetic induction emf / current	 3
∞ rate of change of magnetic flux / opposes the change	 3
(1) Calculate the effective capacitance of the two capacitors. $C = C_1 + C_2 / C = 3 + 4$ $7 (\mu F) / 1/C = 7/12$	 3 3
(m) Give <u>one</u> use of a gold leaf electroscope detect charge / conductor or insulator / identify type of charge / indicate size of p.d./ detect ionising ability of radioactive particles etc.	 6
(n) In the equation E = mc ² , what does c represent? speed / constant of light	 3 3
 (o) What is nuclear fusion? nuclei / atoms / elements join [example / energy released 3 only] 	 3 3

(i) rate of characteristic of velocit	celeration, (ii) weighttange// change in velocity// $\underline{v-u}$ ty (speed)// w.r.t. time// tma / units3 only]		<mark>4 ×3</mark> 3 3
of the eart	ce / attraction // measure of // m ch // how heavy a body is // $\times g$ w the difference between mass and weight 3]		3 3
	experiment to measure the acceleration due to gravity, g. pendulum, string, ruler, timer, cork, stand // electromagnet, ball, ruler, timer, stand any four		7×3 4×3
	[one item missing (-1)]		
Method	correct arrangement of apparatus (shown / described) set the pendulum swinging // release the ball measure the length // height time the oscillations // ball to fall		
	correct equation any three		3×3
repeat // small angle // length /distant	caution you should take to get an accurate result. lowest value of t ce not too small plane // reset the timer etc. any one		3 3
product, squar	statement of Newton's law of gravitation. re, distance ct words, wrong order 2×3]		<mark>3 ×3</mark> 3 ×3
	the weight of the package $V = 5 \times 9.8 / 49 \text{ N}$		<mark>3</mark> 3
	ty of the package after 5 seconds (v = 3 + (9.8)(5))		<mark>3×3</mark> 2×3 3
(iii) the distan	nce that the package falls from the helicopter in 5 seconds $\frac{1}{2}/v^2 = u^2 + 2as/s = 3(5) + \frac{1}{2}(9.8)(5)^2/$		2×3
137.5 (m) / an	$(52)^2 = (3)^2 + 2(9.8)s$ nswer consistent with formula used	····	3 3
· · · ·	<i>t of the package above the ground after 5 seconds</i> ever consistent with distance in (iii)		<mark>3</mark> 3

 (a) What is meant by (i) real image, (ii) magnified image? (i) formed on a screen / inverted / rays converging /appropriate diagram / correct location for lens / correct location for mirror / correct example 		<mark>2×6</mark>
_		6
(ii) bigger		6
<i>State <u>two</u> properties of the image formed by a plane mirror.</i> virtual / laterally inverted / erect / same size as object /		<mark>2×3</mark>
as far behind as object is in front $(u = v)$ / behind the mirror any two		2×3
<i>Experiment to verify that the angle of incidence is equal to the angle of reflection.</i>		<mark>5 ×3</mark>
Apparatus: mirror, ray box / pins		2×3
Procedure: correct arrangement of apparatus mirror perpendicular to the page / mark back of mirror / preca mark incident ray mark reflected ray draw normal measure angles any three	ution	3×3
 (b) State the laws of refraction of light I incident ray, normal, refracted ray on the same plane 		<mark>4×3</mark> 3 3
$ \mathbf{II} \sin i \\ \propto \sin r $		3 3
<i>Complete the diagram to show the formation of the image by the lens</i> One ray correct to lens Correct refraction 2 nd ray correct	··· ···	<mark>3 ×3</mark> 3 3 3
One ray correct to lens Correct refraction	···· ··· ···	3 3

[any one omitted / no labels 3 only] Procedure: increase / read pressure (p) read volume (V) vary // repeat pressure // different values	fixed mass /		
inversely proportional to volume ($\propto 1/V$) // = k // = p ₂ V ₂ any three 3×3 Describe, with the aid of a labelled diagram, an experiment to verify Boyle's law 6×3 Apparatus: pressure gauge // J-tube pump / plunger // mercury enclosed volume of air any two 2×3 [any one omitted / no labels 3 only] Procedure: increase / read pressure (p) read volume (V) vary // repeat pressure // different values valid precaution any four 4×3 What is meant by an ideal gas? 2x3 always / exactly / at all temperatures / at all pressures 3 always / exactly / at all temperatures / at all pressures 3 (b) Give <u>two</u> assumptions of the kinetic theory of gases large no. of particles / elastic collisions / rapid motion / negligible volume / random motion / straight line motion / negligible duration of collisions / temperature depends on K.E. etc. 1^{st} assumption 6 2^{ud} assumption 3 What is Brownian motion? 2x3 motion 3 Describe an experiment to show Brownian motion Apparatus: smoke cell / lamp / microscope any two 2×3 Procedure: fill cell with smoke / shine light from side / focus microscope any two 2×3 Observe: describe what is observed 6			
Describe, with the aid of a labelled diagram, an experiment to verify Boyle's law 6x3 Apparatus: pressure gauge // J-tube pump / plunger // mercury enclosed volume of air any two 2x3 [any one omitted / no labels 3 only] Procedure: increase / read pressure (p) read volume (V) vary // repeat pressure // different values valid precaution any four 4x3 What is meant by an ideal gas? 2x3 obeys Boyle's law / obeys gas laws / satisfies K.T. assumptions 3 always / exactly / at all temperatures / at all pressures 3 3 (b) Give two assumptions of the kinetic theory of gases large no. of particles / elastic collisions / rapid motion / negligible duration of collisions / temperature depends on K.E. etc. 1 ^M assumption 6 2 nd assumption 3 6.3 What is Brownian motion? 2x3 motion 3 3 Describe an experiment to show Brownian motion Apparatus: smoke cell / lamp / microscope any two 2x3 Procedure: fill cell with smoke / shine light from side / focus microscope any two 2x3 3 Observe: describe what is observed 6 3 What does Brownian motion tell you about the nature of gases 3	1 1 1		2 2
<i>Apparatus:</i> pressure gauge // J-tube // mercury pump / plunger // mercury enclosed volume of air any two 2x3 [any one omitted / no labels 3 only] Procedure: increase / read pressure (p) read volume (V) yary // repeat pressure // different values valid precaution any four 4x3 What is meant by an ideal gas? 2x3 obeys Boyle's law / obeys gas laws / satisfies K.T. assumptions 3 always / exactly / at all temperatures / at all pressures 3 (b) Give two assumptions of the kinetic theory of gases 6, 3 arage no. of particles / elastic collisions / rapid motion / 6 negligible duration of collisions / temperature depends on K.E. etc. 1 ⁴⁴ assumption 1 ^{ed} assumption 6 2 nd assumption and collisions / temperature depends on K.E. etc. 1 ^{ed} assumption 6 2 nd assumption 6 2 nd assumption 6 2 nd assumption 3 3 3 Describle an experiment to show Brownian motion	inversely proportional to volume $(\propto 1/V) / = k / = p_2V_2$ any	y three .	3×3
pump / plunger // mercury enclosed volume of air any two 2×3 [any one omitted / no labels 3 only] 2×3 Procedure: increase / read pressure (p) read volume (V) vary // repeat pressure // different values valid precaution any four 4×3 What is meant by an ideal gas? 2×3 obeys Boyle's law / obeys gas laws / satisfies K.T. assumptions 3 always / exactly / at all temperatures / at all pressures 3 (b) Give two assumptions of the kinetic theory of gases large no. of particles / elastic collisions / rapid motion / negligible volume / random motion / straight line motion / negligible volume / random motion / straight line motion / negligible volume / random motion / straight line motion / negligible duration of collisions / temperature depends on K.E. etc. 6 1 th assumption 6 2 th assumption 3 Mhat is Brownian motion? 2×3 motion 3 Describe an experiment to show Brownian motion focus microscope any two Procedure: fill cell with smoke / shine light from side / focus microscope any one 3 Observe: describe what is observed 6 What does Brownian motion t	Describe, with the aid of a labelled diagram, an experiment to verify	Boyle's	law <mark>6×3</mark>
enclosed volume of air any two 2×3 [any one omitted / no labels 3 only] 2×3 Procedure: increase / read pressure (p) read volume (V) vary // repeat pressure // different values valid precaution any four 4×3 What is meant by an ideal gas? any four 4×3 What is meant by an ideal gas? 2×3 obeys Boyle's law / obeys gas laws / satisfies K.T. assumptions 3 always / exactly / at all temperatures / at all pressures 3 (b) Give two assumptions of the kinetic theory of gases 6.3 large no. of particles / elastic collisions / rapid motion / negligible volume / random motion / straight line motion / negligible volume / random motion / straight line motion / 6 2 nd assumption 3 What is Brownian motion? 2×3 molecules / particles 3 Describe an experiment to show Brownian motion 3×3, 6 Apparatus: smoke cell / lamp / microscope any two focus microscope any one 3 Observe: describe what is obser	<i>Apparatus:</i> pressure gauge // J-tube

• • • • • • •	arge no. of particles / elastic collisions / rapid motion / hegligible volume / random motion / straight line motion / hegligible duration of collisions / temperature depends on K.E. etc. 1 st assumption 2 nd assumption What is Brownian motion? nolecules / particles notion Describe an experiment to show Brownian motion Apparatus: smoke cell / lamp / microscope any two Procedure: fill cell with smoke / shine light from side / focus microscope any one		6 3 2×3 3 3 3 3 3×3, 6 2×3 3
	arge no. of particles / elastic collisions / rapid motion / hegligible volume / random motion / straight line motion / hegligible duration of collisions / temperature depends on K.E. etc. 1 st assumption 2 nd assumption <i>2nd</i> assumption <i>What is Brownian motion</i> ? nolecules / particles notion <i>Describe an experiment to show Brownian motion</i> <i>Apparatus:</i> smoke cell / lamp / microscope any two <i>Procedure:</i> fill cell with smoke / shine light from side / focus microscope any one <i>Observe:</i> describe what is observed		6 3 2×3 3 3 3 3 3×3, 6 2×3 3

<i>State the principle on which the moving coil galvanometer is based.</i> current / conductor / coil in a magnetic field experiences a force / moves	···· ···	<mark>3 ×3</mark> 3 3 3
Describe an experiment to demonstrate this principle.Apparatus: magnet, conductor, battery / power source[any two3]		<mark>5 x3</mark> 2×3
<i>Procedure</i> : workable circuit allow current to flow conductor moves	 	3 3 3
Name three parts of a moving coil galvanometercore / coil / needle / spring / magnet / scaleany three		<mark>3 ×3</mark> 3×3
<i>What does a.c. stand for?</i> alternating current		<mark>2×3</mark> 3 3
 (i) Name the parts of the transformer labelled A, B and C A: primary B: secondary C: core [reverse order for A and B (-1), correct words, wrong order2×3, step down3] 		<mark>3 ×3</mark> 3 3 3
(ii) How many turns are required on part B to give an output of 6 V? $N_s / N_p = V_s / V_p$ $N_s / 460 = 6 / 230$ 12 (turns) [3 turns 3]	 	<mark>3 ×3</mark> 3 3 3
<i>Name <u>one</u> device that uses a transformer</i> battery charger / TV etc		<mark>3</mark> 3
What is the advantage to the ESB in transmitting electricity at high volta less heat / less energy / cheaper // more lost // efficient [advantage of a.c. over d.c 3]	ages? 	<mark>2×3</mark> 3 3

QUESTION 6 Answer any <u>two</u> parts

(a) De	efine (i) kinetic energy, (ii) momentum.		<mark>4 ×3</mark>
(i) ene	ergy due to // work // example		3
mo	otion // done		3
[4	$(2 mv^2 2 \times 3]$		
-	-		
(ii) ma	ass		3
· /	velocity (speed)		3
Calcu	late (i) the initial kinetic energy of sphere A		<mark>3 x3</mark>
	$\frac{1}{2} mv^2$		3
	$\frac{1}{2}(2)(4)^2$		3 3
	.6 J		3
			-
(ii) th	e momentum of sphere A before the collision		<mark>2×3</mark>
	$mv / p = 2 \times 4$		
P =	1		3 3
			5
(iii) th	ne momentum of sphere B after the collision		2×3
	$+ m_2 u_2 = m_1 v_1 + m_2 v_2 / 3 \text{ m s}^{-1}$		3
	$m_2 m_2 m_2 m_1 v_1 + m_2 v_2 + 5 m_3$	•••	3
0 (kg		•••	3
(h) Ex	cplain the term <u>spectrum</u>		2~3
	range / spread		2 ~ 2 ~ 3 3
of col	0	•••	3 3
01 001	0015	•••	5
What	happens to the light as it enters the prism at W?		6
	rsed / refracted / split up		6
uispei	sed / Tendeted / Split up		U
Name	the invisible radiation on the screen at (i) region X, (ii) region Y	7	$\frac{4}{3}$
(i)	infra		3
(1)	red	•••	3
			5
(ii)	ultra		3
(11)	violet	•••	3
	[reverse order 2×3]	•••	5
Dagan	ihe how you would detect one of these invisible redictions		3.2
	<i>ibe how you would detect <u>one</u> of these invisible radiations.</i>		<mark>3 x3</mark>
ulern	nometer (thermocouple) // fluorescent material //		22
	Zn and electroscope and shine UV		2×3

	Zn and electroscope a	and shine UV	 2×3
rise in temperature	// glows	// leaves collapse	 3

Question 6 (continued)

(c) State Ohm's law voltage (V) ∞ current (I) / = RI at constant temperature	 	<mark>3 ×3</mark> 3 3 3
<i>What is the unit of electric current?</i> Ampere / Amp / A		<mark>6</mark> 6
Calculate(i) the total resistance of the circuit $R = R_1 + R_2 / R = 3 + 9$ $= 12 \Omega$		<mark>2×3</mark> 3 3
(ii) the current in the circuit V = RI $6 = 12 \times I$ = 0.5	···· ···	<mark>3×3</mark> 3 3 3
(iii) the potential difference (voltage) across the 9 Ω resistor $V = 9 \times 0.5 / 4.5 V$		<mark>3</mark> 3
(d) <i>Give <u>two</u> properties of gamma radiation</i> high energy / low ionising ability / very penetrating / short wavelength / invisible etc any two		<mark>2×6</mark> 2×6
<i>Name <u>two</u> other types of nuclear radiation.</i> alpha beta		<mark>2×3</mark> 3 3

Give <u>two</u> uses of radioactive substances		<mark>2×3</mark>
medical / cancer / carbon dating/ detecting leaks etc	any two	 2×3

What fraction of a sample of radon gas is left after 12 days?	<mark>3 ×3</mark>
$\frac{1}{2}$ / $\frac{1}{2}$ / $\frac{1}{2}$ // $\frac{1}{8}$	 3×3

Answer any eleven parts

 (a) How many (i) protons, (ii) electrons, are there in the Li⁺ ion? (i) 3 (ii) 2 		3
[value given in (ii) one less than (i) 3]		5
(b) Which element is represented by the electronic configuration: 1s ² 2s Argon / element number 18	² 2p ⁶ 3s	² 3p ⁶ 6
(c) Sketch an s-orbital Spherical shape (shown / stated) [sketch of p-orbital 3]		6
(d) Give one example of a molecular crystal Iodine / sucrose / sulphur / ice / dry ice (solid carbon dioxide)/ organic solids etc. [ionic / covalent crystal 3]		6
 (e) Arrange the metals in order of <u>increasing</u> activity Zinc, aluminium, sodium [any two in correct order / reverse order 3] 		6
(f) Name one oxide which is a major cause of atmospheric pollution oxide of carbon / nitrogen / sulfur		3 3
(g) What is meant by an amphoteric oxide? acts as an acid or a base [example 3]		3 3
(h) Copy, complete and balance the equation: $CaCl_2 / H_2$ $Ca + 2HCl \rightarrow CaCl_2 + H_2$		3 3
 (i) Give an example of a weak acid. vinegar / ethanoic acid / acetic acid / carbonic acid etc. [definition of weak acid 3] 		6
(j) Calculate the percentage of nitrogen by mass in ammonia (NH ₃) $M_r \text{ of } NH_3 = 17$ 82% [rain / definition 3]		3 3
(k) State Hess's law heat change independent of path		3 3

Question 7 (continued)

<i>trolysis</i>	
	3
	3
	3
	3
	ſ
	6
	3
	3
	v

 (a) Explain the terms (i) mass number, (ii) isotope (i) number of protons and neutrons 		<mark>4×3</mark> 3 3
 (ii) same number of protons / same atomic number / atoms of the same element different no. of neutrons / different mass number [example 3] 		3 3
 (iii) State the number of neutrons in each of these isotopes 38 neutrons 40 neutrons [difference of two 		<mark>2 ×6</mark> 6 6
<i>(iv) calculate the relative atomic mass of gallium</i> 60 × 69 / 4140 40 × 71 / 2840 69.8	···· ···	<mark>3 ×3</mark> 3 3 3
 (b) What is meant by (i) covalent bond, (ii) ionic bond? (i) sharing of electrons [EN difference < 1.7 / example 3] (ii) transfer // attraction of electrons // between ions 		<mark>4 x3</mark> 3 3 3
[EN difference >1.7 / example 3] [correct but in reverse (-1)] <i>Give one property of ionic compounds.</i> solid / crystalline / high m.p. / high b.p. / good conductors of electricity in molten state or in solution etc.		<mark>3</mark> 3
Using electronegativity values, explain why (iii) sodium chloride is an it compound; (iv) hydrogen chloride is a polar covalent molecule (iii) EN difference greater than 1.7	 onic 	5 4 x3 3 3 3 3
 (iv) less than [correct but in reverse (-1)] State the type and size of charge of the chloride ion in sodium chloride. Cl⁻ [minus 3, one 3] 		6 6

<i>What is meant by the molarity of a substance?</i> moles / concentration / M_r expressed in grams per litre			<mark>2×3</mark> 3 3
Explain why an indicator is used during a titration.show/ change colourend-point/ point of neutralisation			<mark>2×3</mark> 3 3
(i) Draw a labelled diagram of the apparatus used in a tite burette / flask / beaker / pipette / stand / funnel / white tile		••• •••	6, 2×3
 (ii) Name a suitable indicator for this experiment named indicator [use of an indicator 3] 			<mark>6</mark> 6
(iii) Describe how the volume of sulfuric acid required for found. add acid until colour change // read at end-point // three aco adjust (read) to zero / read volume/ subtract readings // // rough titration / average titres		n was	<mark>6,3</mark> 6 3
<i>(iv) State <u>two</u> precautions taken to ensure an accurate res</i> add acid slowly (drop wise) / white tile / swirl flask / wash read bottom of meniscus / three accurate titres / rinse appar rinse burette (pipette) with acid (base)	a sides of flask a state of the sides of flask a state of the state of		<mark>2×6</mark> 2×6
(v) Copy, complete and balance the equation for the react Na ₂ SO ₄ + 2H ₂ O [Na ₂ SO ₄ / 2H ₂ O 3]	tion:		<mark>2×3</mark> 2×3
(vi) Calculate the molarity of the sodium hydroxide soluti	on.		<mark>3 ×3</mark>
$\frac{M_1 \times V_1}{n_1} \qquad / \frac{0.1 \ \times \ 18.5}{1}$			3
$\frac{M_2 \times V_2}{n_2} / \frac{M_2 \times 25}{2}$			3
0.15 (M)			3

(a) Define heat of formation heat change one mole is formed (from its elements)			<mark>2×3</mark> 3 3
Explain why the reaction is exothermic.heat// ΔHgiven off// minus		···· ···	<mark>2×3</mark> 3 3
Calculate(i) the quantity of heat released in the combustion of hydrogen (1 mole) = 286 = 6 × 286 = 1716 (kJ)	on of 6 moles	 	<mark>3×3</mark> 3 3 3
 (ii) the number of moles of oxygen used in the combustion of hydrogen 1 mole H₂ requires ¹/₂ mole O₂ (6 moles H₂) 	n of 6 moles		<mark>2×3</mark> 3 3
(iii) the number of moles of hydrogen required to release (1 mole) = 286 1430 ÷ 286 / 5	1430 kJ of end	ergy 	<mark>2×3</mark> 3 3
(b) Explain oxidation and reduction in terms of electron to loss (of electrons) gain (of electrons) [reverse order (-1)]	ransfer		<mark>2×6</mark> 6 6
Identify (i) the substance oxidised, (ii) the oxidising agent			<mark>6, 3</mark>
(i) Ca (ii) F / F ₂ [reverse order (-1)]	1 st correct 2 nd correct		6 3
Copy and complete the reaction of copper oxide with hydr Cu H ₂ O	rogen gas	····	<mark>2×3</mark> 3 3
Name (iii) the substance oxidised, (iv) the substance reduction (i) H ₂ (ii) Cu / CuO [reverse order (-1)]	ced		<mark>2×3</mark> 3 3

<i>Identify the homologous series to which methane belongs</i> Alkanes			<mark>6</mark> 6	
	<i>her members of this homologous series</i> ane / butane / pentane etc	1 st correct 2 nd correct	····	<mark>4 ×3</mark> 3×3 3
	<i>for methane gas</i> energy source etc.			<mark>6</mark> 6
<i>Give the stru</i> (i) C == C H's attache	<i>ctural formula of (i) ethene, (ii) ethanol</i> ed		····	<mark>4×3</mark> 3 3
(ii) C – C – C H's attach			····	3 3
Describe, wit ethene from	h the aid of a labelled diagram, an experim ethanol	ent to produce		<mark>6×3</mark>
Apparatus:	test-tube, trough, gas jar, Bunsen [no diagram deduct 3]	any three		3×3
Method:	alcohol and glass wool in test tube Al ₂ O ₃ / catalyst sealed tube heat			
	collect gas in gas jar	any three		3×3
What happen changes colour	<i>to the solution in the test tube?</i> // becomes // colourless		····	<mark>2×3</mark> 3 3
unsaturated /	<i>is tell you about the structure of ethene?</i> double bonds 3]			<mark>6</mark> 6

(a) <i>Name the gas being produced</i> carbon dioxide		<mark>6</mark> 6
 Name liquid A and solid B (A) acid (B) suitable carbonate / hydrogen carbonate [reverse order 9] 		<mark>2 ×6</mark> 6 6
<i>Give <u>two</u> uses of the gas produced</i> Fire extinguishers / special effects / fizzy drinks / refrigerant etc. any two		<mark>2×3</mark> 2×3
Describe a test to find out if the gas is acidic or basic Named indicator Give colour change Conclusion (consistent with the colour change)	···· ···	<mark>3×3</mark> 3 3 3

 (b) Define (i) an acid, (ii) a base, in terms of the Bronsted-Lowry theory. (i) proton // pH between 0 - 7 // low pH donor // [example 3] 	• ••••	<mark>4 ×3</mark> 3 3
<pre>(ii) proton // pH between 7 – 14 // high pH acceptor// [example 3] [reverse order (-1)]</pre>		3 3
<i>Identify (iii) <u>two</u> acids, (iv) <u>two</u> bases and (v) <u>one</u> acid-base pair (iii) H₂O, NH₄⁺</i>		<mark>5 x3</mark> 2×3
(iv) NH_3 , OH^- [reverse order (-1)]		2×3
(v) NH_3 , NH_4^+ // H_2O , OH^-		3

Name the scale used to compare the acidity of substances6pH...6

Question 12 (continued)

(c) Draw a diagram to show the arrangement of electrons in ammonia.

Show 1 lone pair Show 3 bond pairs

Complete table

Molecule	Number of	Number of	Shape
	bond pairs	lone pairs	
NH ₃	3	1	
BF ₃	3		
H ₂ O		2	V-shaped / planar

1 st two correct	 2×6
remainder	 3

Sketch the shape of any <u>two</u> of the molecules in the table, showing the positions of the atoms in each case. $\frac{4\times3}{2}$

Any two correct shapes showing correct position of atoms

1 st correct	 9
2 nd correct	 3
