Sc Key stage 3 TIER 3–6

## Science test Paper 2

Please read this page, but do not open the booklet until your teacher tells you to start. Write your name and the name of your school in the spaces below.

First name	
Last name	
School	

## Remember

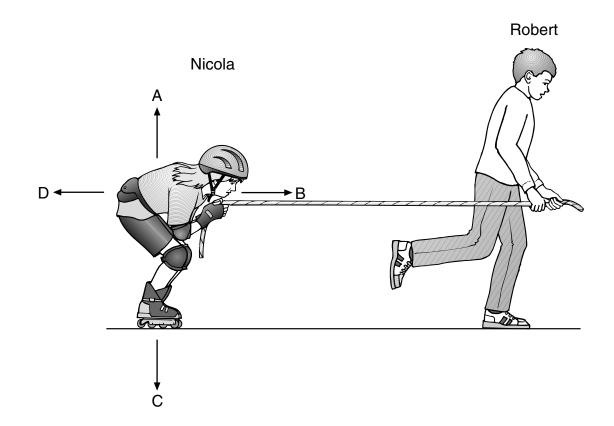

- The test is 1 hour long.
- You will need: pen, pencil, rubber, ruler, protractor and calculator.
- The test starts with easier questions.
- Try to answer all of the questions.
- The number of marks available for each question is given below the mark boxes in the margin. You should not write in this margin.
- Do not use any rough paper.
- Check your work carefully.
- Ask your teacher if you are not sure what to do.

Borderline check

 (a) Nicola is trying out her new roller blades. Robert is pulling her along with a rope.
 Arrows A, B, C and D show the directions of four forces acting on Nicola.

- (i) Which arrow shows the direction of the force of **gravity** on Nicola? Give the letter.
- (ii) Which arrow shows the direction of the force of the **rope** on Nicola? Give the letter.

1ai

1aii

1 mark

(b) Robert pulls Nicola at a steady speed of 2 metres per second. How far will Nicola travel in 10 seconds?

\_\_\_\_\_ metres

(c) Nicola lets go of the rope and she slows down. Gravity still acts on Nicola.

Give the name of **one** other force still acting on Nicola after she lets go of the rope.

2. (a) Ahmed bought two sets of lights to put on a tree in his garden. Circuit diagrams for the two sets of lights are shown below.

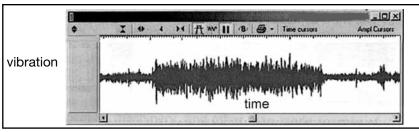

(b)	Light rays from the bulbs hit the mirror of Ahmed's car. What happened to the light rays when they hit the mirror?	2b 1 mark
(c)	The tree has root hairs. What are the functions of root hairs? Tick the <b>two</b> correct boxes.	
	They absorb water They absorb sunlight.	
	They produce seeds. They absorb minerals from the soil.	2c
	They attract bees for pollination.	1 mark

maximum 5 marks

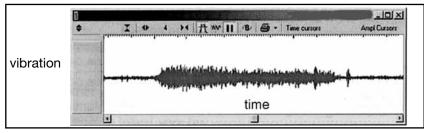

3. On 7th September 2001, at 11.00 am, over a million pupils took part in a national investigation. They all jumped up and down at exactly the same time. Sensors were used to measure the vibrations caused by the jump. Before they jumped, four pupils described some effects they might notice. Trees will The ground will vibrate. shake. Walls will Dogs will bark. collapse. What type of statement did the pupils make? (a) methods conclusions observations predictions За 1 mark Sensors at different places recorded the vibrations of the ground. (b) Why was it important that all the pupils jumped together? Зb 1 mark

(c) The sensor recordings below show the amount of vibration of the ground at three different places during the jump.

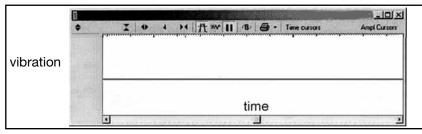

## Sensor A was near where pupils jumped

## Sensor C was at a place far away from where pupils jumped

Carol said, 'When pupils jump, only the ground nearby will vibrate'.

(i) Describe how the evidence in the recordings supports Carol's idea.

(ii)	Suggest <b>one</b> reason for the difference between the readings of
	sensor <b>A</b> and sensor <b>B</b> .

- 4. (a) Reshma had a mixture of iron filings and sand. What could she use to separate the iron filings from the mixture?
  - (b) Reshma put 10 cm<sup>3</sup> of water and 2 g of a different solid into each of four test-tubes. She shook each test-tube.
    The drawings show the test-tubes after 10 minutes.

Why can the salt and sugar no longer be seen in test-tubes A and C?

4b

(c) Reshma added hydrochloric acid to some pieces of limestone as shown below.

- (i) Look at the diagram above.How can you tell that a gas is given off in this experiment?
- (ii) Reshma passed the gas through limewater. This showed that the gas was carbon dioxide.

What happened to the limewater? Tick the correct box.

It stayed clear.	
It turned blue.	
It turned cloudy.	
It turned red.

7. Some pupils carried out an investigation to find out whether more sugar or more salt dissolved in water at 60°C.

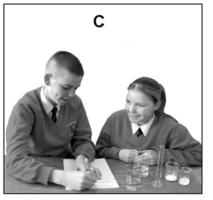

Here are some of the steps in their investigation. They are **not** in the correct order.

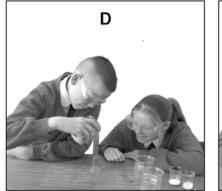

They added salt to one beaker of water at 60°C and sugar to the other beaker of water at 60°C.

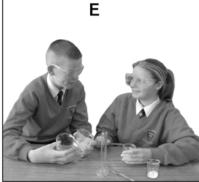

They stirred the mixtures.

They recorded their results.

They put 20 cm<sup>3</sup> of water at 60°C into two beakers.

They collected this equipment.

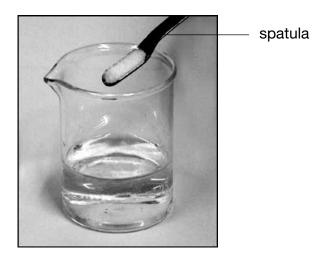

(a) Put the letters **A**, **B**, **C**, **D** and **E** in the boxes below to show the correct order of the steps in their investigation.

7a 1 mark		1st  2nd  3rd  4th  5th	
7b	(b)	Why did they use a measuring cylinder?	
1 mark			

(c) They used water at 60°C in both beakers.

What else did they do to make their investigation fair?

(d) They counted the number of spatulas of sugar or salt added to the water until **no** more would dissolve.

- (i) Why was this **not** an accurate method of measuring how much sugar or salt they added?
- (ii) Suggest a more accurate method of measuring how much sugar or salt they added.

(e) Jane predicted that more sugar than salt would dissolve.

Complete the table to show a result which would support Jane's prediction.

	sugar	salt
number of spatulas	32

12. Some pupils predicted that water will evaporate faster if the surrounding air temperature is higher.

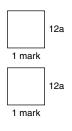

To investigate their prediction they placed some water in containers in two different rooms.

- (a) Give **two** factors they should keep the same to make their investigation fair.
  - 1. \_\_\_\_\_\_ 2. \_\_\_\_\_
- (b) They recorded the mass of the water and the container in room 1 and room 2 every day for 5 days.

The table below shows their results.

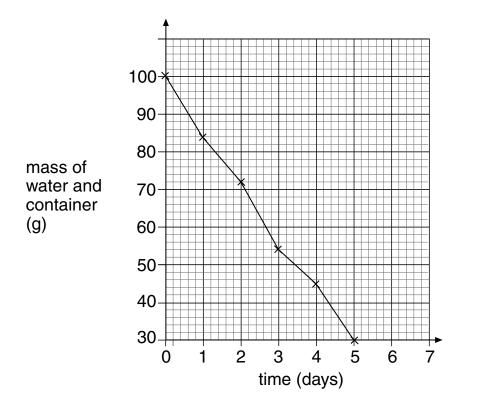

time	mass of water and container (g)			
(days)	room 1	room 2		
0	100	100		
1	92	85		
2	80	72		
3	72	54		
4	60	45		
5	46	30		

The data shown in their table is **not** sufficient to test their prediction. Explain why.

12b

They plotted their data for room 2 and attempted to draw a line of best fit.

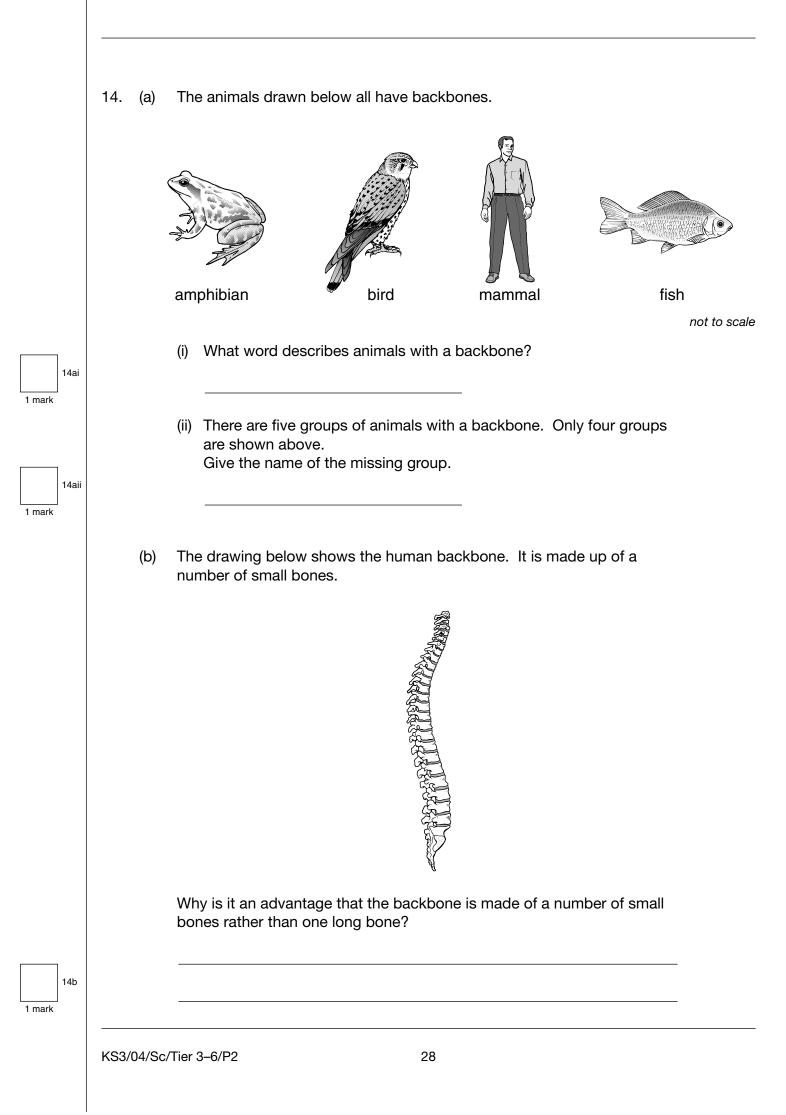

(c) Describe the mistake they made in drawing the line of best fit.

		12c
		1 mark
(d)	Using the data in the table plot the points for room 1.	12d
(e)	Draw a line of best fit of the points you have drawn.	1 mark
(f)	In which room did the water evaporate more quickly? Tick <b>one</b> box. room 1 room 2	
	Use their data to explain your answer.

17. Until 1781 scientists thought there were only six planets in the solar system. Then a scientist called Herschel looked through a very large telescope that could turn to follow objects in space.

He watched a bright object in the night sky for a few months and made drawings of what he saw. He concluded it was a planet.

(a) What method did Herschel use to discover the new planet? Tick the correct box.

He carried out practical
tests in the laboratory.

He asked scientists' opinions.

He observed the environment.

He gathered data from books.

17a

(b) Scientists today use satellites as well as telescopes to observe the universe.

Suggest **one** way that developments in equipment have changed the information scientists collect about planets.

(c) Before 1781, scientists believed there were 6 planets in our solar system. Now scientists believe there are 10 planets.

What do these ideas suggest about our knowledge of our solar system?

(d) What causes scientists to reject an idea and replace it with a new one?
