**Question 2**

[25]

2.1.1

$$x^2 - 6x + 9 + y^2 - 4y + 4 = 12 + 13$$

$$(x - 3)^2 + (y - 2)^2 = 25$$

$$C(3; 2)$$

(5)

Completing the square of x correctly  
Completing the square of y correctly

Adding correctly to RHS of equation

x-value of C  
y-value of C

Correct answer only – full marks  
C need not be in co-ordinate form

2.1.2

For A,  $x = 0$  ✓ M

$$y^2 - 4y - 12 = 0$$
 ✓ A

$$(y - 6)(y + 2) = 0$$

$$y = 6 \text{ or } y = -2$$
 ✓ CA

$$A(0; 6)$$

$$m_{AC} = \frac{6 - 2}{0 - 3}$$

$$= -\frac{4}{3}$$
 ✓ A

$$m_{AB} = \frac{3}{4}$$
 ✓ CA

$$y = \frac{3}{4}x + 6$$
 ✓ M ✓ CA

**OR**

Substituting  $x = 0$  in given equation

Simplifying equation

Solving for y

Substitution of appropriate value of A

Finding the gradient of AC correctly at any of the steps.

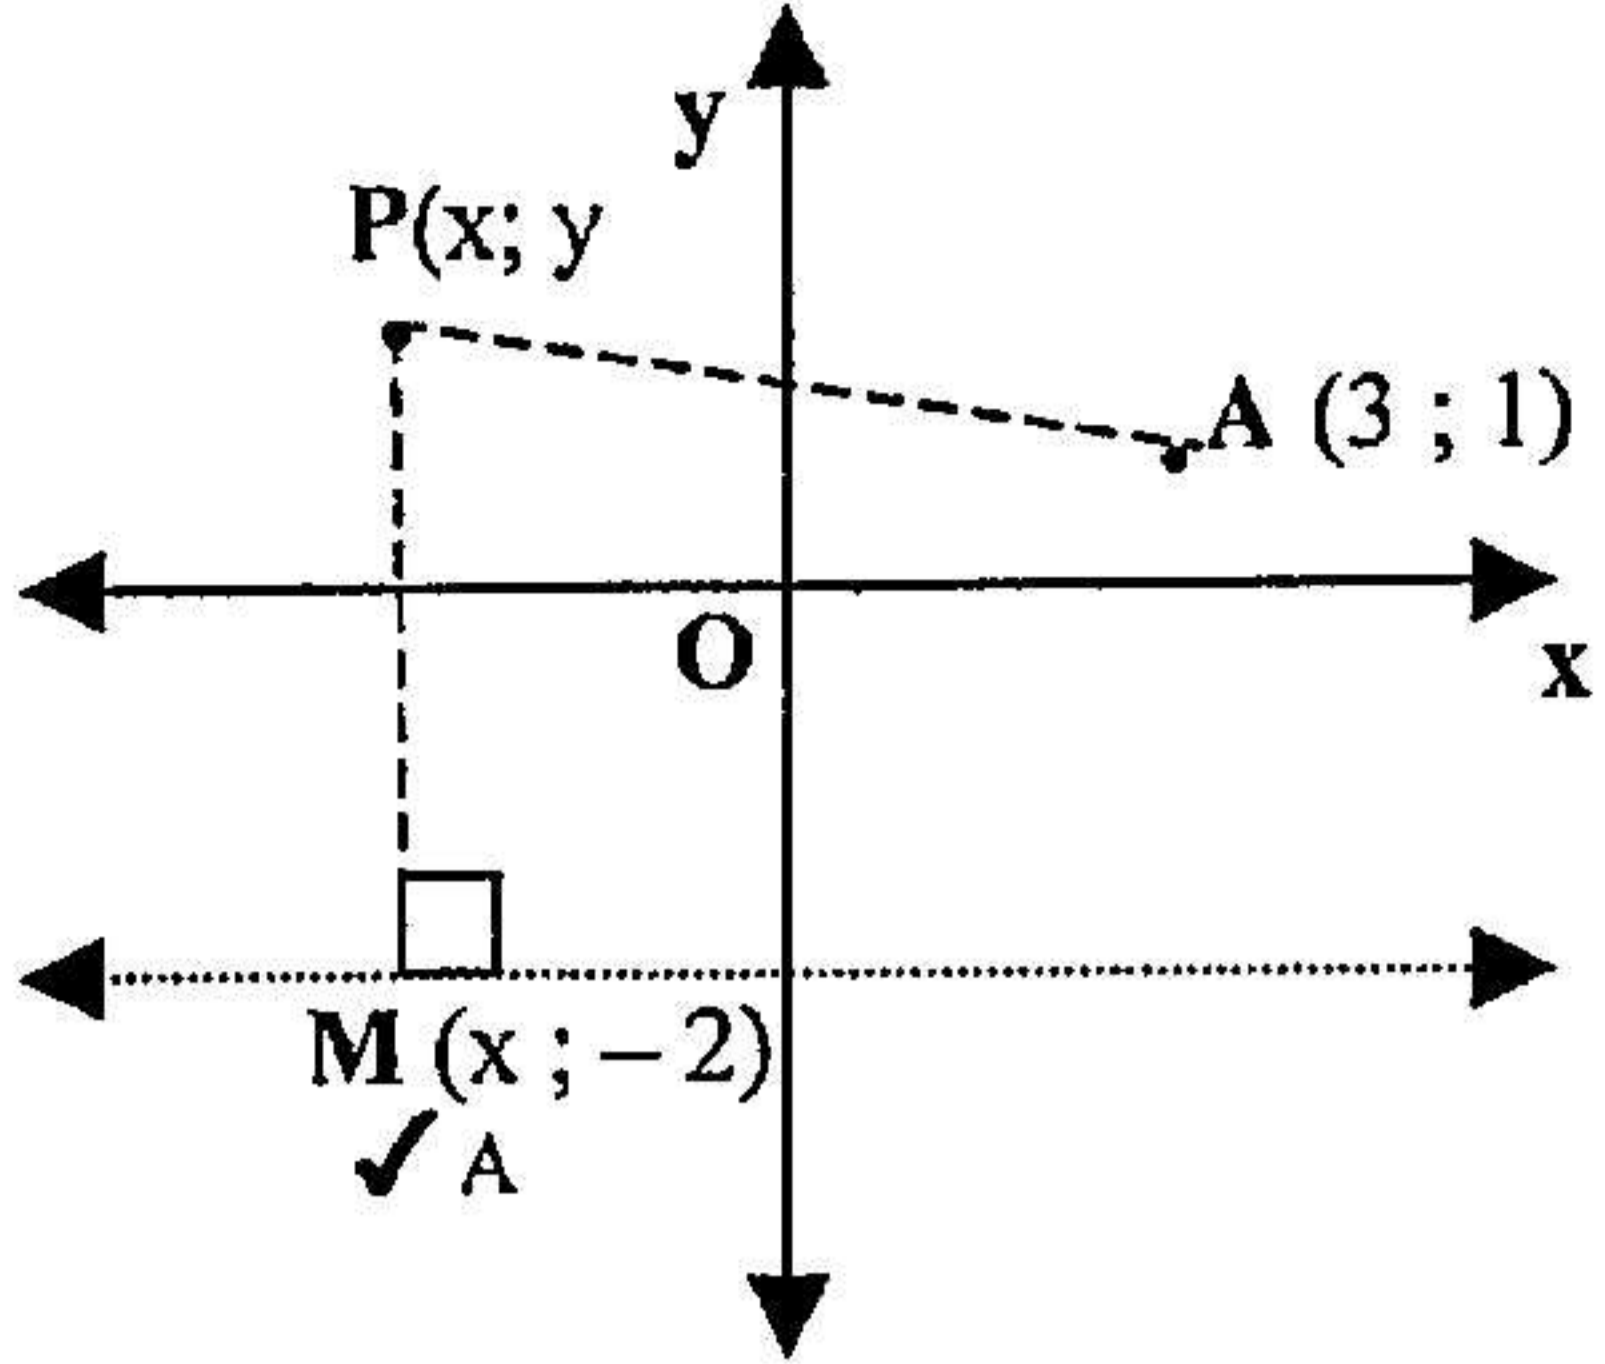

Determining the gradient of the tangent

Substitution into appropriate formula  
Correct substitution

<p><b>OR</b></p> <p>(9) + <math>(y - 2)^2 = 25</math> ✓ M</p> <p><math>(y - 2)^2 = 16</math> ✓ A</p> <p><math>y - 2 = \pm 4</math> ✓ CA</p> <p><math>y = -2</math> (N/A) or <math>y = 6</math></p> <p>A (0 ; 6)</p> <p><math>m_{AC} = \frac{6-2}{0-3}</math> ✓ CA</p> <p><math>= -\frac{4}{3}</math> ✓ A</p> <p><math>m_{AB} = \frac{3}{4}</math> ✓ CA</p> <p><math>y = \frac{3}{4}x + 6</math> ✓ M ✓ CA</p> <p><b>OR</b></p>	<p>Substituting <math>x = 0</math> into equation from 2.1.1</p> <p>Simplifying equation</p> <p>Solving for y</p> <p>Substitution of appropriate value of A</p> <p>Finding the gradient of AC correctly at any of the steps.</p> <p>Determining the gradient of the tangent</p> <p>Substitution into appropriate formula Correct substitution</p>

**Question 3 [23]**

3.1.1

$$\cos \theta = \frac{2}{\sqrt{5}} \quad \checkmark A$$

$$r = \sqrt{5} \quad ; \quad x = 2$$

$$y = \sqrt{(\sqrt{5})^2 - 2^2} = 1 \quad \checkmark M$$

$$x_M = 3(2) = 6 \quad y_M = a = 3(1) = 3 \quad \checkmark CA$$

**OR**

$$\cos \theta = \frac{2}{\sqrt{5}} \quad \checkmark A$$

$$\tan \theta = \frac{a}{6} = \frac{1}{2} \quad \checkmark M \quad \therefore a = 3 \quad \checkmark CA$$

(3)

Writing  $\cos \theta$  as subject or in sketch

Calculating value of  $y$  from  $\cos \theta$

Calculating value of  $a$

Writing  $\cos \theta$  as subject or in sketch

Correct use of  $\tan \theta$

Calculating value of  $a$

3.1.2

$$-\tan(90^\circ - \theta) = \frac{4}{b} \quad \checkmark M$$

$$-\cot \theta = \frac{4}{b} \quad \checkmark A$$

$$-\frac{2}{1} = \frac{4}{b} \quad \checkmark CA$$

$$b = -\frac{4}{2} = -2 \quad \checkmark CA$$

**OR**

In  $\Delta POM$

$$PM^2 = PO^2 + OM^2 \quad \checkmark M$$

$$(b-6)^2 + (4-3)^2 = b^2 + 4^2 + 6^2 + 3^2 \quad \checkmark A$$

$$b^2 - 12b + 36 + 1 = b^2 + 16 + 36 + 9 \quad \checkmark CA$$

$$-12b = 24$$

$$b = -2 \quad \checkmark CA$$

Use of  $\tan(90^\circ - \theta)$

Writing in terms of co-function

Substitution

Simplification

Use of pythagoras

Substitution into the distance formula

Multiplying out

Simplification

**OR**

$$\Delta PTO \parallel \Delta ONM \quad \checkmark M$$

$$\frac{4}{|b|} = \frac{2}{1} \quad \checkmark A$$

$$-2b = 4 \quad \checkmark CA$$

$$b = -2 \quad \checkmark CA$$

**OR**

Use of  $\parallel \Delta$ 's

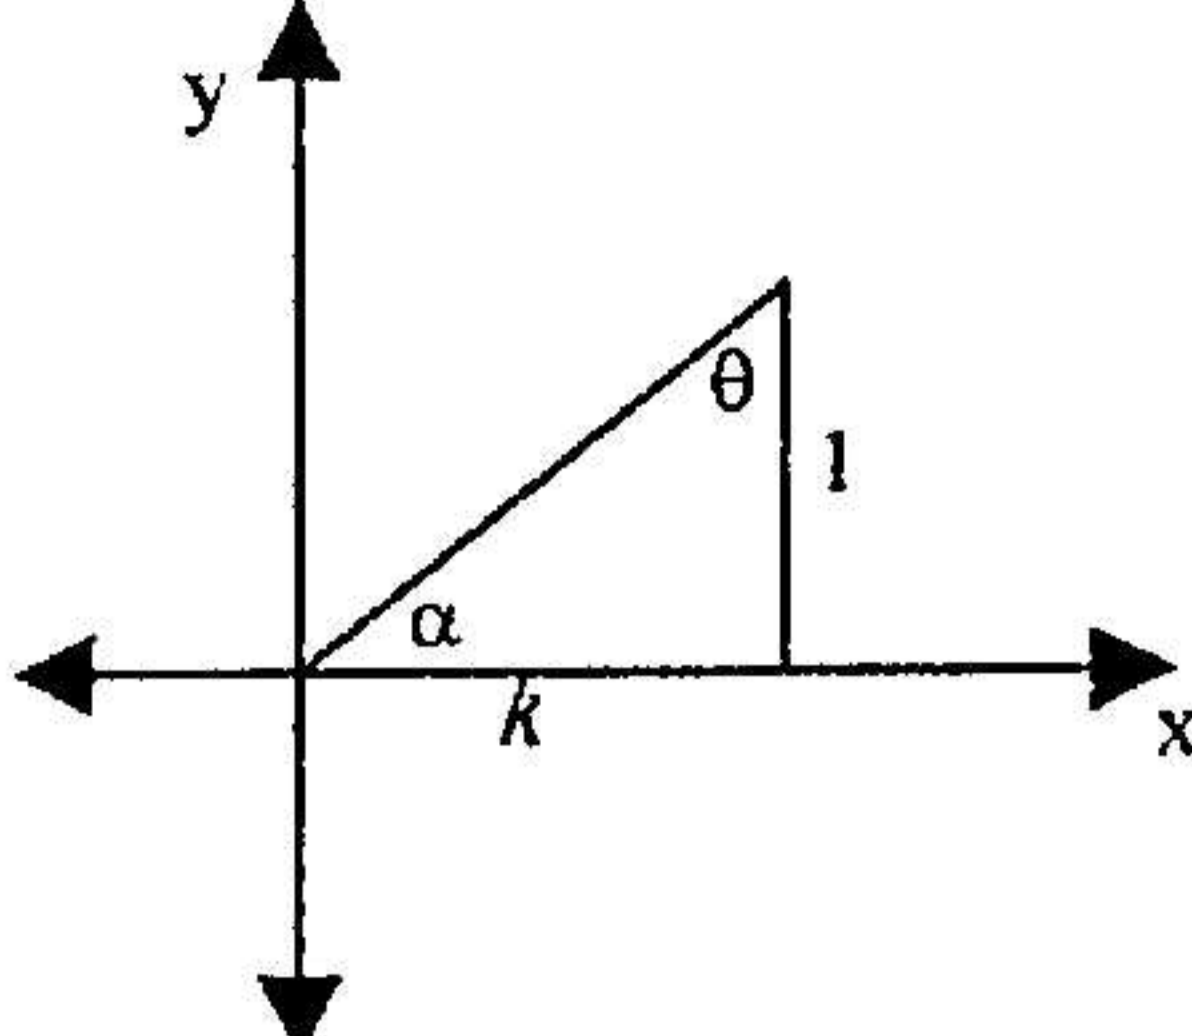

Substitution of ratios

Cross multiplying

Simplification

<p><b>OR</b></p> $\cos(\theta + 90^\circ) = -\sin \theta \quad \checkmark \text{ M}$ $\frac{1}{\sqrt{5}} = \frac{b}{\sqrt{b^2 + 16}} \quad \checkmark \text{ A}$ $\frac{1}{5} = \frac{b^2}{b^2 + 16} \quad \checkmark \text{ CA}$ $5b^2 = b^2 + 16$ $4b^2 = 16$ $b = -2 \quad \checkmark \text{ CA}$	<p>Use of co-function</p> <p>Substitution</p> <p>Squaring both sides</p> <p>Simplification</p>

7.2

Const: Draw a circle through ACD and not passing through B  
 Suppose the circle cuts AB at M. Join M to C. ✓ s

Proof:  $\hat{A}MC + \hat{D} = 180^\circ$  (opp  $\angle$  cycl quad) ✓ s/R

but  $\hat{B} + \hat{D} = 180^\circ$  (given) ✓ s

$\therefore \hat{A}MC = \hat{B}$  ✓ s

Contradiction: ext.  $\angle =$  int. opp  $\angle$  ✓ s

$\therefore$  M must fall on B / B must be on the circumf. of circle ✓ s

$\therefore$  ABCD is a cyclic quadrilateral. (6)

only one case of figure needs to be drawn

Construction may also be shown on sketch.

also use of construction of  $\angle$  at centre

or any other suitable wording

7.3

7.3.1

$\hat{Q}_3 = \hat{S}$  ✓ s (alt. angles. //) ✓ R

$\hat{W}_1 = \hat{S}$  ✓ s ( $\angle$ 's in same segm.) ✓ R

$\therefore \hat{Q}_3 = \hat{W}_1$

$\Rightarrow$  KQ is a tang. to circle LQW ✓ R  
 ( $\angle$  betw. line & chord =  $\angle$  subt. by chord)

(5)

OR converse tan-chord theorem

Question 8

8.1

Let  $SW = x$

$$\frac{SW}{WQ} = \frac{ST}{TP} \quad (\text{line } \parallel \text{ one side } \Delta) / (\text{intercept-midpt}) \quad \checkmark \text{ S/R}$$

$$\therefore SQ = 2x \quad \checkmark \text{ S}$$

$$RS = SQ = 2x \quad \checkmark \text{ S}$$

$$\therefore RW = 3x \quad \checkmark \text{ S}$$

$$\frac{RM}{RP} = \frac{RW}{RQ} \quad \checkmark \text{ S} \quad (\text{line } \parallel \text{ one side } \Delta)$$

$$= \frac{3}{4} \quad \checkmark \text{ S}$$

OR

OR

$$\frac{SW}{WQ} = \frac{ST}{TP} = \frac{1}{1} \quad (\text{line } \parallel \text{ one side } \Delta) \quad \checkmark \text{ S/R}$$

$$\therefore SQ = 2SW \quad \checkmark \text{ S}$$

$$RS = SQ = 2SW \quad \checkmark \text{ S}$$

$$\therefore RW = 3SW \quad \checkmark \text{ S}$$

$$\frac{RM}{RP} = \frac{RW}{RQ} = \frac{3SW}{4SW} \quad \checkmark \text{ S} \quad (\text{line } \parallel \text{ one side } \Delta)$$

$$= \frac{3}{4} \quad \checkmark \text{ S} \quad (6)$$

Reason needs only be given once

8.2

$$\frac{\text{area } \Delta RPS}{\text{area } \Delta RMW} = \frac{\frac{1}{2} RP \cdot RS \sin R}{\frac{1}{2} RW \cdot RM \sin R} \quad \checkmark \text{ S}$$

$$= \frac{\frac{1}{4} \cdot \frac{2}{3}}{\frac{1}{2} \cdot \frac{2}{3}} = \frac{8}{9} \quad \checkmark \text{ CA}$$

OR

$$\Delta RPS = \frac{1}{2} \Delta PQR \quad \checkmark \text{ S}$$

$$\Delta RMW = \frac{9}{16} \Delta PQR \quad \checkmark \text{ S}$$

$$\frac{\Delta RPS}{\Delta RMW} = \frac{\frac{1}{2}}{\frac{9}{16}} \quad \checkmark \text{ S}$$

$$= \frac{8}{9} \quad \checkmark \text{ CA} \quad (4)$$

OR

$$\text{Area } \Delta RPS = \frac{1}{2} \text{ area } \Delta PQR \quad \checkmark \text{ S}$$

$$= \frac{1}{2} \left( \frac{1}{2} PQ \right) H$$

$$\frac{\text{Area } \Delta RPS}{\text{Area } \Delta RMW} = \frac{\frac{1}{4} PQ \cdot H}{\frac{1}{2} \cdot MW \cdot \frac{3}{4} H} \quad \checkmark \text{ S (for } \frac{3}{4} H)$$

$$= \frac{\frac{1}{4} PQ \cdot H}{\frac{1}{2} \cdot \frac{3}{4} PQ \cdot \frac{3}{4} H} \quad \checkmark \text{ S (for } \frac{3}{4} PQ)$$

$$= \frac{8}{9} \quad \checkmark \text{ CA}$$

**QUESTION 9**

**[28]**

9.1

Constr: On XY and XZ cut off  $XP = LO$  and  $XQ = LV$ .  
Join P to Q. ✓ M

Proof:  $\triangle XPQ \cong \triangle LOV$  ✓ S (s,  $\angle$ , s) ✓ R  
 $\therefore \hat{P}_1 = \hat{O}$  ✓ S  
 $= \hat{Y}$  (given)  
 $\therefore PQ \parallel YZ$  (corresp.  $\angle$ 's equal) ✓ S/R  
 $\therefore \frac{XY}{XP} = \frac{XZ}{XQ}$  ✓ S (line // one side  $\Delta$ ) ✓ R  
 $\therefore \frac{XY}{LO} = \frac{XZ}{LV}$  (construction)  
 (7)

**OR**  
 Constr: On XY cut off  $XP = LO$  and draw  $XP \parallel LO$ .  
 Join P to Q. ✓ M

Proof:  $\hat{P}_1 = \hat{Y}$  (corresp.  $\angle$ 's, // ) ✓ S/R  
 and  $\hat{Y} = \hat{O}$  (const.)  
 $\therefore \hat{P}_1 = \hat{O}$  ✓ S  
 $\triangle XPQ \cong \triangle LOV$  ✓ S ( $\angle$ ,  $\angle$ , s) ✓ R  
 $\therefore \frac{XY}{XP} = \frac{XZ}{XQ}$  ✓ S (line // one side  $\Delta$ ) ✓ R  
 $\therefore \frac{XY}{LO} = \frac{XZ}{LV}$  (constr./congr.)  
 (7)

**OR** Construction may be shown on sketch.

**OR**  
 Constr: On XY cut off  $XP = LO$  and draw  $\hat{P}_1 = \hat{O}$ . Join P to Q. ✓ M

Proof:  $\triangle XPQ \cong \triangle LOV$  ✓ S ( $\angle$ ,  $\angle$ , s) ✓ R  
 $\therefore \hat{P}_1 = \hat{O}$  ✓ S  
 $= \hat{Y}$  (given)  
 $\therefore PQ \parallel YZ$  (corresp.  $\angle$ 's equal) ✓ S/R  
 $\therefore \frac{XY}{XP} = \frac{XZ}{XQ}$  ✓ S (line // one side  $\Delta$ ) ✓ R  
 $\therefore \frac{XY}{LO} = \frac{XZ}{LV}$  (construction)  
 (7)

9.2

9.2.1

$\therefore \hat{B}_2 = 90^\circ$  (tan-chord) ✓ S ✓ R  
 $\therefore \hat{N}_1 = \hat{B}_1 = 90^\circ$  (tan-chord) ✓ S ✓ R  
 $\therefore$  GN and BC are altitudes of  $\Delta AGC$   
 $\therefore$  K is the orthocentre (Altitudes concurrent)

OR

$\hat{B}_2 = 90^\circ$  (tan-chord) ✓ S ✓ R  
 In  $\Delta KNC$  and  $\Delta KBG$  ✓ S/R  
 $\hat{K}_3 = \hat{K}_1$  (vert.opp  $\angle$ 's)  
 $\hat{C}_2 = \hat{G}_1$  ( $\angle$ 's in same seg.)  
 $\hat{N}_1 = \hat{B}_1 = 90^\circ$  ✓ S  
 (sum  $\angle$ 's  $\Delta$ )  
 $\therefore$  GN and BC are altitudes of  $\Delta AGC$   
 $\therefore$  Altitudes are concurrent  
 K is the orthocentre

OR

$\hat{C}_2 = \hat{A}_1$  (tan-chord) ✓ S  
 $\hat{C}_2 = \hat{G}_1$  ( $\angle$ 's in same segm.) ✓ S/R  
 $\therefore \hat{A}_1 = \hat{G}_1$  ✓ S/R  
 $\therefore GN \parallel AD$  (alt.  $\angle$ 's equal) ✓ S/R  
 $\therefore \hat{N}_2 = \hat{A}_3 = 90^\circ$  (alt.  $\angle$ 's, //)  
 $\therefore$  GN and BC are altitudes of  $\Delta AGC$   
 $\therefore$  Altitudes concurrent  
 $\therefore$  K is the orthocentre

(6)

$\hat{B}_2 = 90^\circ$  - 2 marks  
 $\hat{N}_1 = 90^\circ$  - 2 marks  
 altitudes - 2 marks
