

3. A curve has equation  $y = \frac{x-4}{5-x}$ ,  $x \neq 5$ .

(a) Write down an equation of the asymptote to the curve which is parallel to

(i) the  $x$ -axis,

(ii) the  $y$ -axis.

**(2)**

(b) Sketch the curve, showing clearly the asymptotes and the coordinates of the points at which the curve crosses the coordinate axis.

4. The point  $A$  has coordinates  $(3, 2)$ . The line  $l$  has gradient  $\frac{7}{24}$  and passes through  $A$ .

(a) Find an equation, with integer coefficients, for  $l$ .

(3)

The point  $B$ , with coordinates  $(b, 9)$ , lies on  $l$ .

(b) Find the value of  $b$ .

(2)

(c) Calculate the length of  $AB$ .

9.

Figure 1

Figure 1 shows a cuboid with a rectangular top  $ABCD$ .

$AB = 5$  cm,  $AD = 8$  cm and  $AE = 4$  cm.

The mid-point of  $DH$  is  $P$  and the mid-point of  $CG$  is  $Q$ .

(a) Find, to 3 significant figures, the length of  $AG$ . (2)

Calculate, in degrees to one decimal place, the **acute** angle

(b) between  $AG$  and the plane  $EFGH$ , (3)

(c) between the plane  $ABQP$  and the plane  $EFQP$ , (3)

(d) between the plane  $BCH$  and the plane  $EFGH$ , (3)

(e) between  $AG$  and  $CE$ . (4)

**Question 9 continued**

Ruled lines for writing answer.

10.

Figure 2

Figure 2 shows the curve with equation  $y = k + 7x - x^3$ , where  $k$  is a constant. The curve crosses the  $x$ -axis at the points  $P$ ,  $Q$  and  $R$ . Given that  $R$  has coordinates  $(3, 0)$ , find

(a) the value of  $k$ , (2)

(b) the coordinates of  $P$  and the coordinates of  $Q$ . (3)

The curve crosses the  $y$ -axis at the point  $S$ . The line  $l$  passes through  $P$  and  $S$ .

(c) Find an equation for  $l$ . (3)

The line  $l$  meets the curve again at the point  $T$ .

(d) Find the coordinates of  $T$ . (3)

(e) Calculate the area of the region shown shaded in Figure 2. (7)
