MARK SCHEME for the October/November 2007 question paper

5054 PHYSICS

5054/03

Paper 3 (Practical Test), maximum raw mark 30

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

• CIE will not enter into discussions or correspondence in connection with these mark schemes.

CIE is publishing the mark schemes for the October/November 2007 question papers for most IGCSE, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

UNIVERSITY of CAMBRIDGE International Examinations

	GCE O LEVEL – October/November 2007	5054	03	

General points

Where the mark scheme does not give specific instructions, apply the following penalties:

- Disregard of instructions leading to poor presentation or error -1
- Systematic error
- Supervisor's help; no penalty for correction of faulty apparatus. no marks to be awarded where the candidate is at fault in the section where he/she was helped. E.g. if told how to use the apparatus in **Question 2** then the one observation mark in **2 (a)** cannot be scored but subsequent marks can score.

-1

Mark scheme code

- B1 Independent mark.
- M1 Method mark, if not given subsequent A mark falls (up to the next B, M or C mark).
- A1 Answer mark, not awarded if an M mark immediately before it is not awarded.
- C1 Compensation mark, given automatically if the answer is correct, i.e. working need not be seen if the answer is correct. Also given if the answer is wrong but the point is seen in the working.

3 The right angle of the triangle should have been labelled B. In theory this would give a BX value of 6.7 cm. Allowing candidates to measure from the centre of the hole rather than the corner gives a value for BX in the range 5.9 cm to 7.0 cm. However some Supervisors have labelled the right angle A, which gives a theoretical BX of 9.6 cm. Allowing for measurements to the centre of the hole rather than the corner gives a range of 8.8 cm to 9.9 cm. A third possibility is that the right angle is at C. This leads to a theoretical BX of 11.4 cm and a range of 10.6 cm to 11.7 cm.
