- 1 All questions should be attempted.
- 2 The questions may be answered in any order but all answers are to be written in the spaces provided in this answer book, and must be written clearly and legibly in ink.
- 3 Rough work, if any should be necessary, as well as the fair copy, is to be written in this book. Additional spaces for answers and for rough work will be found at the end of the book. Rough work should be scored through when the fair copy has been written.
- 4 Before leaving the examination room you must give this book to the Invigilator. If you do not, you may lose all the marks for this paper.

1. The diagram below shows part of a food web in a freshwater loch.

(a) (i) Name **all** the producers in the food web.

_____ 1

(ii) Sticklebacks eat water fleas and perch eat sticklebacks.

Use this information to **add sticklebacks** to the **food web diagram**.

(iii) Name **two** organisms from the food web which are in competition with each other.

1 _____

2 _____ 1

(iv) State **one** possible effect that competition in a food web may cause.

_____ 1

(v) Name an abiotic factor which might affect the number of water fleas in the loch and state how that factor could be measured.

Factor _____ 1

Method of measurement _____

_____ 1

KU	PS

1. (continued)

(b) Sticklebacks build nests in which eggs are released and fertilised. A survey was carried out to estimate the number of sticklebacks by counting the nests in five separate areas of the loch.

The results are shown in the table below.

Area	Number of nests
1	6
2	12
3	9
4	11
5	7

(i) Calculate the average number of nests found in the five areas.

Space for calculation

_____ nests

1

(ii) If each nest represents a pair of sticklebacks, estimate the total number of sticklebacks in the five areas.

Space for calculation

_____ sticklebacks

1

(c) Underline one option from each of the brackets to make the following sentences correct.

Animals, plants and their habitat together make $\left\{ \begin{array}{l} \text{an ecosystem} \\ \text{a community} \\ \text{an environment} \end{array} \right\}$.

All the organisms of the same species in that area form a

$\left\{ \begin{array}{l} \text{biosphere} \\ \text{community} \\ \text{population} \end{array} \right\}$.

Marks

2. Aquatic plants are placed in fish tanks to supply oxygen. The oxygen is a product of photosynthesis.

(a) (i) Name the raw materials of photosynthesis.

_____ and _____

1

(ii) Name the green chemical which plants need to carry out photosynthesis.

1

(iii) Name the form of energy used by producers for photosynthesis.

1

(b) The graph below shows how the concentration of dissolved oxygen changes with water temperature.

(i) Describe the relationship between the water temperature and the concentration of dissolved oxygen.

1

(ii) A fish tank contains fish which need an oxygen concentration of 8 to 10 units.

Suggest a suitable temperature for the water in the fish tank.

_____ °C

4. (a) The following diagram shows the structure of the heart.

From the diagram select the letters which match the statements below.

(i) Produces maximum pressure to push blood round the body.

Letter _____

1

(ii) Prevents backflow of blood into the right ventricle.

Letter _____

1

(iii) Receives oxygenated blood from the lungs.

Letter _____

1

(b) Name the blood vessel which supplies blood to the heart muscle.

4. (continued)

(c) The table below gives information about structures in the blood.

<i>Name of structure</i>	<i>Number in 1 cm³ of blood (millions)</i>	<i>Diameter (mm)</i>	<i>Features</i>
Red blood cells	56 000	0.008	Made in bone marrow. Body produces 280 million each hour. Carry oxygen.
White blood cells	80	0.02	Made in bone marrow and lymph nodes. Fight infection by engulfing bacteria or by producing antibodies.
Platelets	4 000	0.003	Made in bone marrow. Contain proteins which form blood clots.

Use this information to answer the following questions.

- (i) State **one** way that blood cells fight infection.

1

- (ii) Name the substance which forms blood clots.

1

- (iii) Complete the simple whole number ratio below to show the relative numbers of each structure in 1 cm³ of blood.

Space for calculation

5. (a) (i) The diagrams below represent two cells.

Onion root cell

Human cheek cell

Name **three** structures, or parts, shown to be present in **both** cells.

(ii) Name a structure which would be found in a green leaf cell of a plant, but **not** in a root cell.

(iii) What name is given to a substance added to make cell structures more visible when viewing them with a microscope?

(b) Complete the following table about the sex cells of mammals.

<i>Sex</i>	<i>Name of sex cell</i>	<i>Where produced</i>	<i>Relative size (large or small)</i>	<i>Contains food store</i>	<i>Able to swim</i>
Male		Testes		No	
Female	Egg/Ova

6. (a) The following diagrams show two stages in cell division.

Stage X

Stage Y

Draw **one** line from each of the stages named below to its correct description.

<i>Stage</i>	<i>Description of stage</i>
Stage X	Chromosomes become visible in the nucleus
	Chromosomes line up at the equator
Stage Y	Nuclear membrane breaks down
	Cytoplasm divides

2

(b) Underline one option in each of the brackets to make the following sentences correct.

Cell division is controlled by the $\left. \begin{array}{l} \text{membrane} \\ \text{nucleus} \\ \text{cytoplasm} \end{array} \right\}$.

The number of chromosomes in the daughter cells is

$\left. \begin{array}{l} \text{greater than} \\ \text{less than} \\ \text{the same as} \end{array} \right\}$ the original cell.

7. In an investigation into the effect of temperature on seed germination, six dishes were set up as shown below. Each dish contained 20 seeds.

Each dish was left for five days at a different temperature and then examined to see how many seeds had germinated.

The results are shown in the table below.

<i>Temperature</i> (°C)	<i>Seed germination</i>	
	<i>Number</i>	(%)
10	2	10
15	10	50
20		80
25	12	60
30	2	10
35	0	0

- (a) (i) Complete the table to show the number of seeds germinating at 20 °C.

Space for calculation

1

- (ii) What feature of this investigation increased the reliability of the results?

(b) The table below shows the daily water gains and losses of a person at three different environmental temperatures.

		<i>Environmental temperature (°C)</i>		
		15	20	25
<i>Water gain</i> (cm ³)	In drinks	1500	1500	1500
	In food	800	800	800
	From respiration	300	300	300
	Total	2600	2600	2600
<i>Water loss</i> (cm ³)	In breath		400	500
	In sweat	600	1000	3200
	In urine	1500	1100	600
	In faeces	100	100	100
	Total	2600	2600	4400

(i) **Complete the table** by calculating the volume of water lost in the breath at 15 °C.

Space for calculation

(ii) Water balance is usually achieved by the body.

What evidence from the table supports this statement?

(iii) From information in the table, describe **two** changes which take place as the environmental temperature rises.

1 _____

2 _____

(iv) What would the person normally do to restore water balance at 25 °C?

10. Read the following passage carefully and answer the following questions.

Adapted from “*The latest superfood revealed: electric potatoes*”
The Herald, 23 August 2010.

Potatoes could become one of nature’s superfoods. Scientists have tested the effects of mechanical stress on the potato, one of the world’s most widely consumed plant foods.

Scientists know that bruising and exposure to periods of drought stimulate the production of useful compounds such as antioxidants and polyphenols in fresh fruit and vegetables. These antioxidants help the plants to survive droughts, disease and attack by pests by mopping up molecules which can damage cells. Scientists have also shown that zapping potatoes with ultrasound or electricity causes them to double their production of antioxidants, including vitamin C.

When consumed, antioxidants have been shown to combat heart disease, protect arteries and reduce the risk of diabetes and neurological diseases. Antioxidants also prevent damage to DNA which leads to cells becoming cancerous.

- (a) (i) Name **two** natural causes of increased antioxidant levels in fruit and vegetables.

1 _____

2 _____

- (ii) Give **two** treatments carried out by scientists to increase the production of antioxidants in potatoes.

1 _____

2 _____

- (iii) State **one** benefit of antioxidants for plants.

- (iv) Name **one** antioxidant found in potatoes.

Marks

KU	PS

10. (continued)

(b) (i) Explain how antioxidants reduce the risk of cancer.

1

(ii) Give **one** other benefit of antioxidants in our diet.

11. The table below gives information about some common garden flowering plants.

<i>Flowering plant</i>	<i>Height (cm)</i>	<i>Seed sowing time</i>	<i>Flowering time</i>
Hollyhock	150 – 250	March	July – September
Snapdragon	30 – 60	March	July – October
Marigold	30 – 60	April	May – October
Cosmea	60 – 90	April	August – September
Mallow	60 – 90	April	July – September
Sunflower	150 – 250	March	July – October

(a) Use information from the table to complete the key below by writing the correct feature on each dotted line and the correct names in the empty boxes.

3

(b) Which feature could be used to distinguish between Snapdragon and Sunflower plants?

1

Marks

KU	PS

11. (continued)

(c) A plant grows to 50 cm tall and flowers in August.

Why would it be difficult to identify this plant using this key?

1

(d) Name **all** the plants that are sown in March and flower in September.

16. Antibiotics may be prescribed by doctors. Patients are always told that it is important to complete a course of antibiotics.

(a) What is the function of antibiotics?

1

(b) The graph below shows the effect of an antibiotic on bacterial growth in patients with a throat infection.

(i) From the information in the graph, explain why it is important to complete a course of antibiotics.

1

(ii) One patient took the antibiotic four times a day as 250 mg tablets for 10 days.

How much antibiotic had been taken by the time the number of bacteria had been halved?

Space for calculation

_____ mg
