UNIVERSITY OF LONDON

MSc DEGREE IN BUILT ENVIRONMENT 2003 for Internal Students of University College London

L02: Lighting sources (retake)

Answer **TWO** questions.

All questions carry equal marks. Use annotated sketches.

- 1. In an extended discussion, identify the problems in achieving energy savings with daylight-linked control systems in commercial buildings.
- 2. Compare the generation of light in lamps based on incandescence and those based on discharge in a gas.
- 3. The trustees of a national art collection have asked you to assess the daylighting and sunlighting regime in a new design of a top-lit gallery. Outline the measurement procedures that you would follow to address this question using a variable luminance artificial sky/sun.

4.

ł

In a survey of the range of luminaire types currently available, show how their design has exploited the operating and performance characteristics of common lamps.
