University of London

## EXAMINATION FOR INTERNAL STUDENTS

For The Following Qualification:-

B.Sc.

ES3040: Financial Management

COURSE CODE : ENVS3040

UNIT VALUE $: \mathbf{0 . 5 0}$

DATE : 14-MAY-04

TIME
: 10.00

TIME ALLOWED : 3 Hours

## ENVS3040 Financial Management

## You must answer SIX questions: FOUR from Section $A$ and TWO from Section B

## Section A. Answer FOUR questions. Each question is worth 15 marks.

1. Please illustrate the development of business case in the context of Gateway Review and explain why this issue is important to ensure the efficiency of construction procurement?
2. (1) What is optimum bias in the project appraisal and why does it matter?
(2) Use an example to illuminate how adjustments for optimum bias can be done.
3. (1) What are the pitfalls of the $\operatorname{IRR}$ (internal rate of return) rule?
(2) Illuminate the best way to improve the soundness of this rule.
4. This year your company has a budget of $£ 5,000,000$ to make investments. Suppose the new investment projects submitted by different divisions of your company are as follows:

| Project | NPV <br> (£million) | Investment <br> (£million) |
| :---: | :---: | :---: |
| A | 4.4 | 4 |
| B | 2.8 | 2 |
| C | 3.6 | 3 |
| D | 7 | 3.5 |
| E | 3 | 1 |

Please use profitability index to determine the best allocation of the budget available to your company this year.
5. A. Fung Fashion, Inc. anticipates real net cash flows to be $\$ 100,000$ this year. The real discount rate is $15 \%$ per year.
(a) What is the present value of these cash flows if they are expected to continue forever.
(b) What is the present value of these cash flows if the real net cash flows are expected to grow at $5 \%$ per year forever.
(c) What is the present value of these cash flows if the expected growth rate is $-5 \%$ per year.
6. Explain the effects of the following items on the value of a corporate bond:
(a) A call provision
(b) The bond is convertible into shares
(c) The bond is secured by a mortgage on real estate
(d) The bond is subordinated.

## Section B. Answer TWO questions. Each question is worth 20 marks

1. You are asked to evaluate the following four projects ( $\mathrm{A}, \mathrm{B}$, and C ), and provide a sound advice to your boss about which project should be given a go-ahead.

| PROJECT | Cash Flows (1000 £) |  |  |  |
| :--- | :---: | :---: | :---: | :---: |
|  | year 0 | year 1 | year 2 | year 3 |
| A | -10 | 3 | 3 | 6 |
| B | -5 | 4 | 1 | 1 |
| C | -15 | 5 | 5 | 10 |

(a) Please calculate the net present value of these three projects, if the opportunity cost of capital is $10 \%$. Which one is most desirable?
(b) What is the payback period on each of the projects? Given that you wish to use the payback rule with a cutoff period of two years, which projects would you accept?
(c) If the firm uses the discounted-payback rule, what is the payback period on each of the project?
(d) In this example, can the discounted-payback rule improve the payback rule? If a cutoff period of three years is used, will this approach accept any negative-NPV projects? Explain.
2. You are facing an uncertain investment decision: choosing the projects $A$ and $B$.

Projects A and B need to make an initial investment ( $C_{0}$ ) of $£ 20,000$ and $£ 50,000$, respectively. In the following two years, the cash flows of these two projects are uncertain. For project A, the cash flow in the first year may be $£ 10,000$ or $£ 20,000$ with the same probabilities of 0.5 . In the second year, the cash flow will be $£ 5,000$ or $£ 10,000$ with the probabilities of 0.2 and 0.8 . The cash flows of project B are provided in the table below.

| PROJECT | Cash flow (£1000) |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  | $\mathrm{C}_{0}$ | C $_{1}$ |  | $\mathrm{C}_{2}$ |  |
|  |  | Amount | Probability | Amount | Probability |
| A | -20 | 10 | 0.5 | 5 | 0.2 |
|  |  | 20 | 0.5 | 10 | 0.8 |
| B | -50 | 20 | 0.6 | 60 | 0.5 |
|  |  | 10 | 0.4 | 30 | 0.5 |

(1) Calculate the expected values of cash flows for projects A and B.
(2) If discounting is ignored, which project will be better?
(3) If the cash flows are discounted at $10 \%$, which project will be better?
(4) If the answers of (2) and (3) are different, give an intuitive interpretation.
3. (1) What are the main differences between project financing and corporate financing?
(2) What are the main rationales of project financing?

## END OF PAPER

Formula for Financial Management

$$
N P V=C_{0}+\sum \frac{C_{1}}{(1+r)^{\prime}}
$$

$$
\mathrm{PV}_{1}=\frac{C}{r}-\left(\frac{C}{r}\right) \frac{1}{(1+r)^{\prime}}
$$

$$
\mathrm{PV}_{\mathrm{t}}=\left(\frac{C}{r}\right) \frac{1}{(1+r)^{t}}
$$

$$
\mathrm{PV}=\frac{C}{r-g}
$$

## PRESENT VALUE TABLES

Discount factors: Present value of $\$ 1$ to be received after $t$ years $=1 /(1+r)^{t}$.

| Number of Years | Interest Rate per Year |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1\% | 2\% | 3\% | 4\% | 5\% | 6\% | 7\% | 8\% | 9\% | 10\% | 11\% | 12\% | 13\% | 14\% | 15\% |
